Expectations remain firm for the Fed to continue with its rate hikes in 2022 but the path has become more uncertain, given the shift to “meeting by meeting” basis. We now expect another two more 50bps rate hikes at the Sep and Nov FOMC before ending the year with another 25bps hike in Dec.

The MAS surprised with a second off-cycle policy announcement on 14 Jul as it took a *“further calibrated step to tighten monetary policy so as to lean against price pressures becoming more persistent”* via a re-centring the mid-point of the S\$NEER policy band to its prevailing level. MAS policy is likely in restrictive setting after four rounds of tightening since Oct 21. We think Oct MPS tightening is still on the cards but off-cycles are done for 2022 unless core inflation surprises.

Asian central banks have raised interest rates or are on the verge of doing so as inflation rise but the pace of hikes is unlikely to match the Fed’s. Key economic risks include more contagious COVID-19 variants, higher commodity prices due to the sanctions on Russia, China’s economic slowdown and more aggressive tightening by the Federal Reserve that could increase market volatility and slow global demand.

Identified carbon-intensive segments most likely to be impacted by climate change: <ul style="list-style-type: none"> Metals and mining Transportation Building Materials Forestry Energy Chemicals Agriculture 	<ul style="list-style-type: none"> Partnered an internationally recognised environmental consultancy in climate scenario analysis in 2020 Three pathways of climate scenarios based on research by IEA and OECD: <ul style="list-style-type: none"> An orderly transition where early actions are taken to reduce emissions to meet climate targets (high carbon price scenario) A disorderly transition where delayed and drastic actions are taken to meet climate targets (moderate carbon price scenario) Business-as-usual where no actions are taken (low carbon price scenario) 	<ul style="list-style-type: none"> Conducted a pilot physical risk analysis involving approximately 2,000 wholesale banking customers (~80% of the total wholesale banking exposure) and retail banking property mortgages focusing on our major markets that are most vulnerable to physical risks, i.e. Malaysia, Thailand and Indonesia. The analysis utilised a bottom-up approach with customers' operating and asset locations overlaid on various climate hazard maps to determine their vulnerability to seven physical hazards in short-, mid-, and long-term horizons up to 2050 over three IPCC climate scenarios. In addition, we also refreshed our transition risk analysis. 	<ul style="list-style-type: none"> Partnered with a leading global consultancy and developed an improved climate risk assessment methodology and uplift the internal capacity of the Bank. The improved methodology integrates multiple climate risk drivers, considers both transition risk and physical risk, and includes sector specific approach for high-risk sectors, as well as a general approach for other sectors. The detailed methodology and assessment results will be disclosed in the UOB Sustainability Report 2022.

Exposure to Greater China

As at 30 Jun 2022:

Mainland China exposure

(\$24.8b or 5% of total assets)

Bank exposure (\$8.2b)

- ~35% of total exposure to Mainland China, with top 5 domestic banks and 3 policy banks accounting for ~70% of total bank exposure
- 98% with <1 year tenor and mostly for trade, which accounts for ~50% of total bank exposure

Non-bank exposure (\$12.6b)

- Client base include top-tier state-owned enterprises, large local corporates and foreign investment enterprises
- ~60% denominated in RMB and ~55% with <1 year tenor
- NPL ratio at 0.5%

Hong Kong SAR exposure

(\$42.4b or 9% of total assets)

Bank exposure (\$1.5b)

- ~60% are to foreign banks

Non-bank exposure (\$35.6b)

- Exposure mainly to corporate and institutional clients
- ~55% with <1 year tenor
- NPL ratio at 2.1%, QoQ increase attributable to a major real estate client downgraded in 2Q22

Exposure to Commodities

Jun 22	Oil and Gas (O&G)		Other Commodity Segments ²	Total
	Upstream industries	Traders / downstream industries ¹		
Outstanding loans	S\$2.5b	S\$9.0b	S\$10.3b	S\$21.8b
% of total loans	4%		3%	7%

As of 30 June 2022, outstanding loans to commodities remain modest and represented 7% of total loans. In particular, outstanding O&G loans represented 4% of total loans as compared to 5% as at 30 June 2018.

Outstanding O&G exposure is to downstream players and traders which are mainly national oil companies (NOCs) and global firms, while short-term structured loans account for a significant share of the remainder.

A considerable portion of upstream exposure is to NOCs and international oil companies, while vulnerable accounts were already classified and their collateral value marked down (by as much as 90%) by end 2017.

Note:

- (1) O&G upstream industries include offshore service companies.
- (2) Other commodity segments refer to agribusiness, metals and mining.

New NPA formation rose due to a major but non-systemic corporate account; NPL ratio stable
