**IFS Capital Launches Regional Technology Financing Programme
Covering Hardware, Software and Services Under a Single Facility**

Singapore, 7th October 2026 — IFS Capital Limited (“IFS Capital”) today launched a regional technology financing programme that enables businesses in Singapore, Malaysia, Indonesia and Thailand to fund their technology investment, including hardware, software and services, under a single facility. The programme launches in partnership with a leading global technology provider, whose customers and channel partners across the four markets can now access IFS Capital's financing when purchasing its solutions.

A key feature of the programme is its coverage of software and services alongside equipment. As enterprise technology spend increasingly shifts towards these non-hardware elements, traditional asset financing, which is built around physical equipment, does not fully meet the needs of businesses. With these elements brought into a single facility, businesses can finance the full scope of a technology project rather than just the hardware. This preserves working capital for other priorities such as inventory, hiring and expansion.

The programme is established through an agreement between IFS Capital and the technology provider's regional financing arm, setting out a common financing framework across the four markets. Under the framework, the technology provider and its authorised channel partners may introduce eligible businesses to IFS Capital for financing, subject to IFS Capital's assessment. The programme draws on IFS Capital's 39 years of financing experience and its operations in each of the four markets.

“The question for many businesses today is often not whether to invest in technology but how to fund it without tying up capital they need elsewhere. This programme gives them greater flexibility by covering the full scope of a project: not just the hardware, but also the software and services. This combination, offered in a single facility, is where we think we can be genuinely useful to technology partners and the businesses they serve across the region,” said **Randy Sim, Group CEO, IFS Capital**.
