SGX Catalist-Listed Annica Showcases Hydrogen Technologies at Malaysia's Technomart 2026

Singapore, 8 July 2026 – Annica Holdings Limited ("**Annica**", and together with its subsidiaries, the "**Group**") said today that its renewable energy subsidiary, H2 Energy Sdn Bhd ("**H2 Energy**"), participated in the Technomart Malaysia – Scaling Hydrogen Offtakes ("**Technomart**") event held in Cyberjaya, Selangor, Malaysia, as part of the Group's strategy to accelerate the commercial deployment of hydrogen technologies across Malaysia.

Together with its sister company, Panah Jaya Services Sdn Bhd, H2 Energy showcased commercially deployable hydrogen and fuel cell technologies that address the growing demand for energy security, decarbonisation and long-duration clean energy solutions.

Held under the theme "Scaling Hydrogen Offtakes", Technomart is organised by the Malaysian Industry-Government Group for High Technology and serves as a platform connecting technology developers, industry leaders, government agencies and investors to accelerate technology commercialisation.

The event provides an important platform for H2 Energy to demonstrate to technology adopters, industry leaders, government agencies and financiers that hydrogen technologies have progressed beyond demonstration projects towards scalable commercial deployment.

At the event, H2 Energy presented its Solar + Hydrogen Energy System, designed to provide reliable and resilient power for off-grid telecommunications towers, rural healthcare facilities, communities and other critical infrastructure.

It also featured its Direct Methanol Fuel Cell solutions, developed together with its international technology partners, which provide compact, portable and long-duration power solutions for applications where conventional diesel generators have traditionally been used, such as military field operations, disaster relief, forest parks, border security posts, temporary command centres, mobile medical units and outdoor events.

Together, these technologies demonstrate practical pathways towards reducing diesel dependency while strengthening energy resilience and supporting Environmental, Social and Governance (ESG) objectives of both public and private sector organisations.

The event enables H2 Energy to engage directly with prospective customers, and strategic partners, in line with the Group's strategy of building a commercially viable ecosystem spanning technology, engineering, financing and infrastructure development as it accelerates its foray into the renewable energy market.

Hydrogen is expected to play an increasingly important role as governments and industries seek resilient, low-carbon energy solutions for critical infrastructure.

In response, H2 Energy is exploring collaborations with telecommunications operators to support ESG and decarbonisation initiatives through renewable-powered off-grid energy solutions. It is also engaging with Malaysian ports to explore Green Port initiatives that integrate renewable energy, hydrogen production, long-duration energy storage and clean fuel solutions into future port operations.

Ms Sandra Liz Hon Ai Ling, Executive Director and Chief Executive Officer of Annica Holdings Limited, said: "Technomart reflects the next phase of Malaysia's hydrogen journey from technology development to technology adoption. As we strengthen our collaboration with our partners, we can play a key role in Malaysia's energy transition through our ability to deliver practical, commercially viable hydrogen solutions that address energy security, sustainability and industrial competitiveness."
