

Gold's Relationship With the Dollar

Don't Count Gold Out With a Strong Dollar

The dollar and gold often move in opposite directions, but not symmetrically, in part because there are other factors that drive the gold price. We believe that gold is an effective portfolio diversifier, and that investors shouldn't necessarily sell their gold allocations when the dollar is rising.

Exploring The Gold-Dollar Asymmetry

Ever since President Richard Nixon ended the dollar's peg to gold in 1971, the prices of both have tended to move opposite to one another. In other words, a weakening dollar has historically pushed the gold price up and vice versa (Figure 1). However, this relationship has been asymmetrical. The price of gold has historically risen about twice as much during periods when the dollar weakens as it has fallen during strong-dollar ones (Figure 2).

There are various reasons why the asymmetry between gold and the dollar exists. We believe that two of those reasons stand out. First, gold is one of the multiple currencies that exist in the monetary system, as its use by central banks in their foreign reserves makes clear. So, the link between gold and the dollar should not be seen in isolation, but in relationship to other currencies as well. Second, while important, the dollar is just one of the many drivers that influences gold, and that complexity can alter the negative correlation between the two.

The US Dollar Index (DXY) Index measures the performance of the US Dollar against a basket of currencies: EUR, JPY, GBP, CAD, CHF and SEK. Gold price is based on LBMA Gold Price, which is determined twice each business day (10:30 a.m. and 3:00 p.m. London time) by participants in a physically settled, electronic and tradable auction.

Gold's Relationship With the Dollar—Don't Count Gold Out With a Strong Dollar

This 45-year analysis shows how sharply gold prices can rise in periods when the dollar is weak. This includes the period of stagflation in the US during the 1970s or in the 2000s after the introduction of the euro and when EM economies expanded and their currencies appreciated.

Crucially, a strong dollar did not provoke a cratering of gold prices during periods of dollar strength. For example, when Lehman Brothers failed in 2008 or when the eurozone's sovereign debt crisis flared up, a strong dollar did not provoke a cratering of gold prices.

Gold's Potential Diversifying Benefits Outweigh Potential Headwinds A Strong Dollar Brings

This asymmetric historical relationship helps illustrate our belief that given gold's overall value as a portfolio diversifier, investors should not reflexively unload gold holdings at times when the dollar is strengthening.¹

One key point is that gold's correlation to other assets has historically remained low no matter whether the dollar is weak or strong, as the following table shows. Adding gold may potentially boost a portfolio's diversification, tamping down volatility. Broader diversification, in turn, may lower volatility and potentially improve risk-adjusted returns.² It is worth noting, of course, that diversification alone does not ensure a

Long-Term, the Dollar's Influence Over Gold is Likely to Diminish

Over the longer term, as the financial system moves into a multi-currency world, the dollar may not be the only sought-after asset, potentially reducing its influence as a reserve currency. For example, in recent years there has been a wider push by Chinese authorities to make China's currency, the yuan, more accepted internationally.

Other Factors Influence the Price of Gold

While the dollar is an important driver, there are, in all, seven factors that interact with one another, jointly influencing the gold market and the price of gold. The influence of each of these factors is not static, and responds to changes in the gold market, including structural shifts that may occur, such as the increasing relevance of Asian markets or the advent of gold-backed ETFs, to name a few.

...Gold Remains A Strategic Long-Term Asset

Looking at the big picture, the dollar matters, but it does not define gold's relevance for investors.

In fact, the dollar strength that has prevailed for much of the past few years actually highlights gold's potential function as a diversification and risk-management portfolio asset. These can be increasingly important roles, particularly as both stocks and bonds may deliver lower-than-average returns in the coming years.

Important Risk Information

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs' net asset value. Brokerage commissions and ETF expenses will reduce returns.

While the shares of ETFs are tradable on secondary markets, they may not readily trade in all market conditions and may trade at significant discounts in periods of market stress.

Diversification does not ensure a profit or guarantee against loss.

Commodities and commodity-index linked securities may be affected by changes in overall market movements, changes in interest rates, and other factors such as weather, disease, embargoes, or political and regulatory developments, as well as trading activity of speculators and arbitrageurs in the underlying commodities.

Important Information Relating to SPDR Gold Trust:

The SPDR Gold Shares Trust ("GLD") has filed a registration statement (including a prospectus) with the Securities and Exchange Commission ("SEC") for the offering to which this communication relates. Before you invest, you should read the prospectus in that registration statement and other documents GLD has filed with the SEC for more complete information about GLD and this offering. You may get these documents for free by visiting EDGAR on the SEC website at www.sec.gov or by visiting spdrgoldshares.com. Alternatively, the Trust or any authorized participant will arrange to send you the prospectus if you request it by calling 1-866-320-4053.

GLD is not an investment company registered under the Investment Company Act of 1940 (the "1940 Act") and is not subject to regulation under the Commodity Exchange Act of 1936 (the "CEA"). As a result, shareholders of the Trust do not have the protections associated with ownership of shares in an investment company registered under the 1940 Act or the protections afforded by the CEA.

Investing involves risk, and you could lose money on an investment in GLD. Please see the GLD prospectus for a detailed discussion of the risks of investing in GLD shares. The GLD prospectus is available by clicking [here](#).

GLD shares trade like stocks, are subject to investment risk and will fluctuate in market value. The value of GLD shares relates directly to the value of the gold held by GLD (less its expenses), and fluctuations in the price of gold could materially and adversely affect an investment in the shares. The price received upon the sale of the shares, which trade at market price, may be more or less than the value of the gold represented by them. GLD does not generate any income, and as GLD regularly sells gold to pay for its ongoing expenses, the amount of gold represented by each Share will decline over time.
