This Product Highlights Sheet is an important document.

- It highlights the key terms and risks of the iShares MSCI India Climate Transition ETF (formerly known as iShares MSCI India Index ETF) (the "Fund") and complements the prospectus of the Fund (the "Prospectus")<sup>1</sup>.
- It is important to read the Prospectus before deciding whether to purchase units in the Fund ("Units"). If you do not have a copy, please contact us to ask for one.
- You should not invest in the Fund if you do not understand it or are not comfortable with the accompanying risks.
- If you wish to purchase Units in the Fund, you will need to make an application in the manner set out in the Prospectus.

## ISHARES MSCI INDIA CLIMATE TRANSITION ETF (FORMERLY KNOWN AS ISHARES MSCI INDIA INDEX ETF)

PRODUCT HIGHLIGHTS SHEET

	KEY RISKS	the Prospectus for further information on their roles and responsibilities and what happens if the Manager, Trustee or Custodian is insolvent.
Th Th	HAT ARE THE KEY RISKS OF THIS INVESTMENT? e value of the Fund and its distributions if any, may rise or fall. ese risk factors may cause you to lose some or all of your vestment:	Refer to "Specific Risks" in the "Description of the MSCI India ETF" section and the "Risk Factors" section of the Prospectus for further information on the risks of investing in the Fund.
	Market and Credit Risks	
•	The Fund is exposed to Indian economic and political risks as the market price and liquidity of the Indian securities may be affected by exchange rates and controls, interest rates, changes in Indian governmental policy, taxation, social and religious instability and other political and economic developments affecting India.	
	Liquidity Risks	
•	The secondary market may be illiquid. You can sell your Units on the SGX. However you may not be able to find a buyer on the SGX-ST when you wish to sell your Units. While the Fund intends to appoint at least 1 market maker to assist in creating liquidity for investors, liquidity is not guaranteed and trading of Units on the SGX-ST may be suspended in various situations. The National Stock Exchange on which corresponding shares	
	of the India Access Products ("IAPs") are traded may be considered volatile and unstable and Participating Dealers will be reluctant to create or redeem Units if trading in the underlying Indian securities is suspended.	
•	The clearing, settlement and registration systems for Indian stock markets may not be on par with more mature markets and accordingly settlement problems may affect the net asset value ("NAV") and liquidity of the Fund.	
•	<b>There is limited liquidity</b> as a disproportionately large percentage of market capitalisation and trading value in the Indian stock exchanges is represented by a relatively small number of issues.	
•	The Securities and Exchange Board of India may impose restrictions on trading in Indian securities, limitations on price movements and margin requirements if it believes there are any fraudulent and unfair trade practices, which in turn could adversely impact the liquidity of the Fund.	
	Product-Specific Risks	
•	There is no guarantee that the Fund will achieve a high degree of correlation to the Index and therefore achieve its investment objective. Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure	

<ul> <li>to the required levels in order to track the Index.</li> <li>The tracking error of the Fund may be increased due to the costs of maintaining the IAPs and spread and foreign exchange costs. The value of the IAPs represented by a Unit may differ from the price of the shares to which the IAPs are linked leading to an increased tracking error.</li> <li>Indian law imposes limits on the ability of foreign portfolio investors to acquire shares in certain Indian issuers from time to time, which may force the Manager to use a more representative sampling strategy and in turn increase tracking error.</li> <li>As the Manager does not intend to hedge the foreign currency exposure of the Fund, the Fund is exposed to foreign exchange risk between the US Dollar and the Rupee. Further, there can be no assurance that the Indian Government will not impose restrictions on foreign exchange and in relation to the repatriation of capital.</li> <li>There may be difficulty in obtaining information on Indian</li> </ul>

companies as Indian disclosure and regulatory standards are less	
stringent than those in certain OECD (Organisation for Economic	
Co-operation and Development) countries.	
• The Fund may invest in financial derivatives, which compared	
to securities can be more sensitive to changes in interest rates or	
sudden fluctuations in market prices due to both the low margin	
deposits required and the higher degree of leverage. Thus, if the	
Fund invests in financial derivatives, there is a risk that its losses	
may be greater than if it had invested only in securities.	
• The Fund may invest in an issuer that could face potentially reduced revenues or increased expenditures from physical	
climate risk (e.g. decreased production capacity due to supply	
chain perturbations, lower sales due to demand shocks or higher	
operating or capital costs) or transition risk (e.g. decreased	
demand for carbon-intensive products and services or increased	
production costs due to changing input prices).
