

PRESS RELEASE

FOR IMMEDIATE RELEASE

Sarine Technologies is Expanding Sarine Profile™ to Include 4Cs Grading and Diamond Verification

Hod Hasharon, Israel, August 28, 2017 – Singapore Exchange Mainboard-listed Sarine Technologies Ltd ("Sarine" U77:SI), and together with its subsidiaries, "the Group"), worldwide leaders in the development, manufacture and sale of precision technology products for the evaluation, planning, processing, finishing, grading and trading of diamonds and gems, is excited to announce that it is expanding its services, adding 4Cs grading and diamond identification to its Sarine Profile™ Report.

The revolutionary automated Sarine Clarity™ and Sarine Color™ grading technologies combined with Sarine's industry-standard DiaMension™ HD Cut grading and Sarine Light™ light performance grading, along with advanced synthetic diamond and treatment detection methods, will allow Sarine to deliver an unmatched level of accurate, repeatable and automated diamond grading with less subjectivity and far fewer human errors. This will induce the entire industry pipeline, as well as the consumer, to have a much higher level of confidence in the diamond's characteristics as detailed in the report.

The enhanced 4Cs Sarine Profile™ report will, optionally, include advanced synthetic diamond and treatment detection. Sarine is closely collaborating with GGTL Laboratories, a prestigious independent Swiss gem lab and a global leader in research of synthetic diamonds and other treatments, who is providing lab services to elite European diamond and gem jewellers and watchmakers. As part of this collaboration, Sarine is benefitting from the advanced knowhow, methods and equipment that GGTL has developed, as well as their decades of experience, which has positioned them as leaders in this area. GGTL will also collaborate with Sarine on further validation of its automated grading technologies, as well as on ongoing research and development of cutting-edge technology-based solutions for diamond testing and grading.

With these significant enhancements, the Sarine Profile™ report can be configured to include either 4Cs grading and diamond verification, or the standard Sarine Profile™ report with light performance, the hearts & arrows pattern and advanced 3D diamond imaging, or an all-inclusive combination provided in one comprehensive report. The Sarine Profile™ report can thus allow retailers to sell their diamonds backed by a technologically accurate digital report that is geared towards the modern, internet-savvy and social media-oriented consumer. The enhanced Sarine Profile™ report can even further support the retailer's brand and strengthen customers' confidence in it, allowing retailers to better differentiate their jewellery lines in an ever more competitive market.

David Block, Chief Executive Officer of Sarine, said, "The days of dry, technical, non-intuitive diamond reports are coming to an end. Sarine's new reports can provide consumers with a more reliable and coherent way to buy diamonds and diamond jewellery, and can support the entire diamond pipeline with a new level of accuracy, objectivity and repeatability. Our new services include the world's first automated measurement and grading of all the 4Cs and light performance, diamond verification, interactive digital reports, and a host of revolutionary new approaches to gemmological research that add layer upon layer of depth and power to the diamond story. By providing added value to the manufacturing, wholesale and retail sales processes for diamonds and jewellery, the ground-breaking Sarine Profile™ service enhances its already new, exciting and effective way for consumers to engage with diamonds and jewellery throughout the purchase process."

About Sarine:

Established in 1988, Sarine Technologies Ltd. is a worldwide leader in the development and manufacturing of advanced evaluation, planning, processing, and finishing systems for diamond and gemstone production. Sarine products include diamond Cut, Clarity, Color and light performance grading tools, the Galaxy™ family of inclusion mapping systems, rough diamond planning optimisation systems, laser cutting and shaping systems, laser-marking and inscription machines and polished diamond visualisation systems. Sarine systems have become standard tools in every properly equipped gemology lab, diamond appraisal business and manufacturing

plant, and are essential aids for both diamond dealers and retailers. For more information about Sarine and its products and services, visit <http://www.sarine.com>.
