

FOR IMMEDIATE RELEASE

Secura Awarded Contract to Deploy iLOQ Battery-Free Smart Locking System at the Institute of Mental Health

SINGAPORE - 13 April 2026 - Secura Group Limited (“**Secura**”) is pleased to announce that its subsidiary, Soverus Kingdom Systems Pte Ltd, has been awarded a contract for the deployment of 802 units of iLOQ battery-free smart locking system at the Institute of Mental Health (“**IMH**”), marking the first project awarded under its partnership with iLOQ, a global provider of battery-free smart locking solutions.

The deployment forms part of Secura’s ongoing work with iLOQ to provide secure, sustainable and digitally enabled access control solutions for public sector and critical infrastructure clients in Singapore. It also demonstrates the practical application of the collaboration in a healthcare environment with stringent operational and security requirements.

Secura will be responsible for the implementation and integration of the digital locking solution, working closely with stakeholders to ensure smooth deployment and alignment with site-specific security and compliance needs.

“This contract with IMH reflects the progress of our collaboration with iLOQ and our ability to translate technology partnerships into tangible outcomes for our clients,” said Barry Kan, CEO of Secura. “Digital access solutions such as iLOQ allow large healthcare institutions to strengthen security while improving operational efficiency and sustainability.”

The iLOQ smart locking system will utilise iLOQ’s patented energy harvesting technology, eliminating the need for batteries or wired power while enabling, secure, centrally managed access control. The solution supports improved operational efficiency, reduced maintenance requirements, and enhanced security oversight of lockers located across IMH’s facilities.

The system also enables flexible access rights management and auditability, allowing access permissions to be updated securely without the need for physical key changes. Its battery-free design also contributes to lower lifecycle costs and reduced environmental impact, supporting long-term sustainability objectives.

This contract builds on Secura's track record of delivering technology-enabled security solutions across government, healthcare, and mission-critical environments, reinforcing its role as a trusted security and integration partner.

ABOUT SECURA GROUP LIMITED

Secura Group Limited (“**Secura**”) is one of Singapore’s leading providers of an integrated suite of security products, services and solutions. Its security guarding business, **Soverus Pte Ltd**, provides unarmed manned security guarding services and operates a state-of-the-art 24-hour command centre equipped with remote CCTV surveillance and video analytics for round-the-clock monitoring of premises. Alongside this, **Soverus Kingdom Systems Pte Ltd**, specialises in the delivery and integration of digital security and access control solutions. With close to a decade of industry experience, Soverus Kingdom supports clients with technology-enabled systems that enhance security, operational efficiency and compliance requirements.

The Group also operates one of Singapore’s most established security printing businesses, **Secura Singapore Pte Ltd** founded in 1976 and commemorating its 50th anniversary this year. Leveraging decades of specialised expertise, the business produces a wide range of secure, high-quality documents incorporating anti-counterfeit features, including bank cheques, passbooks, educational certificates and other value documents, serving institutions that require trusted and reliable document security.

Complementing its physical and document security capabilities, Secura provides a comprehensive suite of cybersecurity services through **OneSecure Asia Pte. Ltd**. These services include 24/7 security operations centre (SOC) monitoring, detection of web spoofing and site defacement, and mitigation of Distributed Denial-of-Service (DDoS) attacks, enabling organisations to strengthen their digital defences with continuous threat detection and expert technical support.
