 - ✓ **Including the above, total contracts secured since 1 April 2017 exceeds \$200M**
 - ✓ **Order book of \$240m at close of November**
-

SINGAPORE, 7 December 2017 – Mainboard-listed foundation and geotechnical engineering specialist **CSC Holdings Limited's** wholly owned subsidiaries have secured foundation contracts for the Kim Chuan Depot Extension and the underground Keppel MRT Station and its associated tunnels, on the Circle Line 6 ("CCL6").

These latest awards bring the aggregate value of transport infrastructure contracts secured by CSC to more than \$70 million since the start of its financial year on 1 April 2017 ("FY18").

The Kim Chuan Depot Extension project will see CSC lend its geo-technical expertise for the construction of bored piles, contiguous bored piles and installation of king posts at the depot. When completed, the extension will see the fully underground depot nearly doubling its capacity to accommodate 133 trains, from its currently capacity of 70. Along with this, the integrated depot will house 550 buses above ground, which will allow for optimal land use. Work on the Kim Chuan Depot project will commence in December 2017 and is targeted to be completed by mid-2019.

The Keppel MRT Station will be a two-level underground station located south of Keppel Road, next to the Keppel Terminal, and one of three new stations to close the loop for the Circle Line. CSC will carry out the construction of diaphragm walls, bored piles, barrette piles, contiguous bored piles, installation of king posts, as well as pile grouting works. The Group will commence work in December 2017 and deliver the project by early 2019.

Including the two infrastructure projects above, CSC has secured in excess of \$200 million worth of foundation contracts since the start of FY18. As at 30 November 2017, CSC's order book stood at approximately \$240 million.

About CSC Holdings Limited

CSC Holdings Limited (SGX: C06) is Singapore's largest foundation and geotechnical engineering specialist, and one of the region's leading ground engineering solutions providers for private and public sector work, which include residential, commercial, industrial and infrastructure projects.

The Group operates principally as a foundation and geotechnical specialist and offers a full range of capabilities in this field, including the construction and installation of large diameter bored piles, diaphragm walls, driven piles, jack-in piles, micro piles, soil improvement works, soil investigation and instrumentation services, as well as automatic tunnel and structural monitoring survey.
