Keppel Data Centres Selects Epsilon for Enhanced Connectivity

Customers will benefit from network IaaS offering which offers enhanced connectivity across Singapore and around the world.

SINGAPORE, 18 January 2016 – Keppel Data Centres Holdings Pte Ltd (Keppel Data Centres), a subsidiary of Keppel Telecommunications & Transportation Limited (Keppel T&T), has selected Epsilon, a privately owned global communications service provider, to deliver local access networks in Singapore, IP Transit services and global connectivity.

Keppel Data Centres will be able to support the networking needs of its customers using Epsilon's flexible network Infrastructure as a Service (network IaaS) offering, enabling them to scale their cloud services globally.

Mr Thomas Pang, Chief Executive Officer of Keppel T&T said, "Beyond providing just data centre colocation services, we are exploring more ways to add value and further support our customers' businesses. Organisations today need flexible, proven and secure infrastructure to run their enterprise applications and solutions. By offering Network Infrastructure as a Service, our clients will enjoy enhanced connectivity and flexibility when they need to incorporate cloud infrastructure to scale up quickly.

"We will continue to explore new opportunities with customers and support their growth in the long term," he added.

Epsilon has local fibre infrastructure connecting data centre sites and enterprise locations in Singapore to its global network spanning Europe, the Middle East, North America and Asia-Pacific.

"Singapore is one of the world's largest cloud hubs and we are proud to support the local and international growth of Keppel Data Centres' customers. Our network IaaS is an ideal match for data centre providers who want to efficiently expand their network footprint with a model that is as flexible and agile as the cloud services they support. This deal demonstrates our ability to serve local needs while scaling globally to enable the success of our customers," said Jerzy Szlosarek, Chief Executive Officer at Epsilon.

Epsilon's terabit global optical backbone connects 70 points of presence (PoPs) and is supported by over 500 carrier relationships with Epsilon's end-to-end 24/7 Network Operating Centre. Near real-time on demand provisioning through pre-connected on-net sites are possible on Epsilon's network to meet customer's needs, including short term contracts as needed.

About Epsilon

Epsilon is an award-winning enabler of connectivity services to communications service providers around the world. It operates the world's largest Global Network Exchange with 500+ network operators pre-connected and ready for its networks to be used to create tailor-made solutions for service providers globally. Epsilon's services portfolio includes managed networks, co-location, system integration, first line maintenance and access solutions for voice service aggregation. As a carrier neutral infrastructure provider, Epsilon operates and sources the highest quality networks and services in more than 170 countries and build flexible network solutions for national, regional and international communications companies.

With the support of bespoke intelligent networking technology, Epsilon's Cloud Link eXchange (CLOUDLX) was developed to ensure the network mirrors the simplicity, agility and efficiency of the cloud so customers can connect their clouds anywhere in the world. CLOUDLX is recognised by the industry as the "Best Cloud Innovation" during the recent Global Carrier Awards in Paris.
