CNA Group to enlarge recurrent income pool

- Phase I of Dongying Industrial Water Treatment Plant completed
- Recurring tariffs to be collected from June 2014

Singapore, 12 May 2014: Singapore Mainboard-listed Master Systems Integrator (“MSI”), CNA Group Ltd. (“CNA” or “the Group”) is pleased to announce that the civil construction and equipment installation for Phase I of the industrial waste water treatment plant (the “Dongying Plant”) at Dongying City, Shandong Province PRC¹, has been fully completed. The plant is expected to contribute a monthly recurring tariff from commercial operations by June 2014.

Mr Michael Ong, CNA’s Group CEO and President commented: ***“I am thrilled that the Dongying Plant will be in operation very soon. The tariffs that we will be getting will contribute favourably to our pool of recurrent income and help smoothen the lumpy nature of our project-based revenue.”***

The Dongying Plant started its trial run in June 2013 and commenced full scale testing and commissioning in March 2014. It has successfully fulfilled the specified regulatory environmental discharge requirements in mid-April 2014. The Industrial Zone Administrative Office has since allowed the plant to commence its commercial operation with the immediate priority to treat accumulated industrial waste water in the lake within the industrial zone that was discharged by factories without proper treatment in the past.

Dedicated piping systems that will carry waste water directly from various factories into the treatment plant are currently in the final stages of construction and installation by the industrial zone administrative office.

The Dongying Plant has a full treatment capacity of 30,000 tons per day.

¹ CNA Group and the Administrative Committee of the Dongying Economic and Technological Development Zone of Dongying City, Shandong Province, China had entered into a Thirty Years Concession Agreement on 23rd August 2010 for the Fund Raising, Investment, Design, Construction, Operation and Maintenance of a Comprehensive Industrial Waste Water Treatment Plant at Binhai New Materials Industrial Estate of the Zone
