### 9. Where a forecast, or a prospect statement, has been previously disclosed to shareholders, any variance between it and the actual results.

#### Not applicable.

## 10. A commentary at the date of the announcement of the significant trends and competitive conditions of the industry in which the group operates and any known factors or events that may affect the group in the next reporting period and the next 12 months.

Global consumption of petroleum and liquid fuels averaged 96.9 million b/d in 2021, up by 5.0 million b/d from 2020, it is expected that global liquid fuels consumption will grow by 3.6 million b/d in 2022 and 1.8 million b/d in 2023. Oil prices have increased over the past year (2021) as a result of steady draws on global oil inventories and high GDP growth. Notably, the Omicron variant of COVID-19 raises questions about global energy consumption but to date few if any impacts are evident as the increase in economic activity and easing of the COVID-19 related restrictions have contributed to rising energy use and prices.

Brent crude oil spot prices averaged \$71 per barrel in 2021. Brent spot prices have risen to more than \$93/b in early February 2022. As per EIA, Brent prices will remain high, averaging \$75/b during 2022. The higher forecast reflects expectation that global oil inventories will fall at a faster rate than previously expected owing largely to lower global oil supply in late 2021 across a range of producers. In 2022, EIA expects that growth in production from OPEC+, U.S. tight oil, and other non-OPEC countries will outpace slowing growth in global oil consumption and contribute to Brent prices declining from current levels to an annual average of USD75/b (\$4/b higher than 2021). This healthy price level will have a very positive impact on Subsea Business.

Global growth is expected to moderate from 5.9 percent in 2021 to 4.4 percent in 2022—half a percentage point lower for 2022 than in the October World Economic Outlook (WEO), largely reflecting forecast markdowns in the two largest economies (USA & China).

(Registered in the Kingdom of Thailand) (Company Registration No. 0107550000017)

Elevated inflation is expected to persist for longer than envisioned in the October WEO report, with ongoing supply chain disruptions and high energy prices continuing in 2022. Assuming inflation expectations stay well anchored, inflation should gradually decrease as supply/demand imbalances wane in 2022 and monetary policy in major economies responds. The question remains as to the tolerance levels of major Central Banks (Fed, ECB, BOJ, BOE) to accept an uptick of inflationary pressure. We will monitor inflationary pressures closely to position ourselves in the best possible way to counter concerns about rising inflation.

The outlook for subsea service providers remains very positive from a medium to longer term perspective. Capital investments by oil exporting nations is expected to continue, and these remain core markets to Mermaid. The shift towards natural gas and renewable sources of energy outside of Europe are expected to peak over the next decade and provide a definite increase in the number of work opportunities and scopes for the Group, as well as to soak up tonnage in the intermediate space.

An increase in total number of global projects, both in renewables and traditional Oil and Gas, is keeping the active vessel fleet occupied. This should support utilization, and is expected to continue supporting rate levels over the longer term horizon. Incremental increases are already a fact, and this is expected to continue for the intermediate term.
