Overview of UOB Group

Founding

Founded in August 1935 by a group of Chinese businessmen and Datuk Wee Kheng Chiang, grandfather of the present UOB Group CEO, Mr. Wee Ee Cheong

Expansion

UOB has grown over the decades organically and through a series of strategic acquisitions. It is today a leading bank in Asia with an established presence in the Southeast Asia region. The Group has a global network of more than 500 branches and offices in 19 countries and territories.

Note: Financial statistics as at 30 June 2017.

Macroeconomic Outlook

China's Growth Slower but Low Risk of Hard Landing

- While China's GDP growth rate is slowing, the annual increase in absolute GDP has been stable.
- The Chinese economy has its underlying momentum, supported by rebalancing reforms and steady job market.
- Low central government debt underpins China's fiscal capacity, which could help mitigate "black swan" events.
- Base case scenario for China: slow and unexciting growth; sideways movements in RMB; global economy continues to recover at gradual pace, led by the US.

Brexit Impact on Asian Markets via Trade and Investment Channels

- It is a challenge to quantify Brexit effects with certainty at this stage.
- The immediate impact on Asian economies is likely to be limited and shallow, considering the low export reliance.
- If adverse impact of Brexit spreads to the broader European Union, however, this could have a more significant impact on Asia given the trade and investment links. As a bloc, EU represented 10.3% of ASEAN's total exports and 16% of FDIs in 2015.

- Recovery in inflation and growth in regional economies turned out to be more gradual than expected. However, the monetary policy bias remains tilted towards tightening in 2018, in line with the tightening signals from G10 central banks. In all, monetary convergence is more likely than further divergence.
- The US Fed Reserve is poised to further normalise interest rates (where 2017 should see 3 rate hikes, including the March and June hikes) and start balance-sheet reduction (BSR) in late 2017. A higher degree of convergence in rates is expected in 2018.
- Moderately stronger USD and further US Fed rate hikes with BSR implementation will gradually raise SGD rates over the long-term.
- Capital flight risk for Asia has seemingly receded as Asian currencies maintained strength amid policy uncertainties in the US. This is anchored by improved economic fundamentals and enhanced confidence in regional central banks.

Manufacturing Sector to Continue To Lead Singapore GDP in 2017

- Advance 2Q17 GDP growth was at 2.5% yoy (1Q17: +2.5%), supported mainly by robust expansion in the electronics and precision engineering clusters, and further improvement in the services sector. Positive spillover from the trade to non-trade sectors, improvement in global demand, but slowdown in the tech cycle and strength in the SGD pose headwinds to sustained growth in 2H17.
- We keep GDP growth forecast at 2.4% in 2017 compared with 2.0% in 2016.
- Core inflation will rise to an average 1.3% in 2017 (2016: 1.0%), as the base effects of lower commodity prices and government subsidies wear off.

Southeast Asia Banking Sector: Strong Fundamentals Remain Intact

Key Banking Trends

- Southeast Asian banks have healthy capital and funding levels
 - Singapore banks have among the highest capital ratios in the region
 - As solvency is not generally an issue, focus would be on putting the excess capital to productive uses
- Policy changes in regulation, liquidity, rates and sector consolidation are shaping the Southeast Asian banking business models going forward

1. Includes 2% for D-SIB buffer for the three Singapore banks.
2. Each regulator determines its own level of countercyclical capital buffer. This requirement is currently set at 0%, except for Hong Kong.
3. HKMA has set a CCyB of 2.5% to be phased in over a period of 3 years. In 2017, the CCyB requirement is 1.25% of RWA.
4. According to the regulations, Indonesia D-SIBs will initially be subject to a D-SIB buffer of up to 2.5%.
5. In China, G-SIBs are only subject to the higher of G-SIB and D-SIB buffer
6. Minimum ratios on fully-loaded basis, including capital conservation buffer and D-SIB surcharge, but excluding countercyclical capital buffer and G-SIB surcharge

Banking Regulations Still Evolving

“ Banks need to be profitable in order to be strong. Retained earnings are one of the major sources of equity – which is the highest quality capital that banks hold. Banks also need to be profitable to be able to support the real economy. They have to earn a decent return for intermediating credit, otherwise they will do less of it.

– Mr Ravi Menon, Managing Director, Monetary Authority of Singapore, 20 April 2017

“ ...certain liabilities should be excluded from the scope of bail-in because their repayment is necessary to ensure the continuity of essential services and to avoid widespread and disruptive contagion to other parts of the financial system. The proposed scope of bail-in would hence exclude liabilities such as ... senior debt and all deposits. ”
