Company Name	TSH RESOURCES BERHAD
Stock Name	TSH
Date Announced	22 Oct 2026
Category	General Announcement for PLC
Reference Number	GA1-20102026-00074

TSH RESOURCES BERHAD (“TSH” OR “COMPANY”)

• RESPONSE TO THE ENQUIRY FROM THE SINGAPORE EXCHANGE SECURITIES TRADING LIMITED (“SGX”) REGARDING THE FOREST AND PEATLAND FIRES IN INDONESIA

1. Introduction

We are issuing this statement to set out how we prevent and manage fires across our Indonesian estates. TSH has not been named or issued any notice by any environmental agency(ies) in connection with the recent transboundary haze. This statement follows a general information request from SGX, which TSH is now answering in full on Bursa Malaysia Securities Berhad and SGX.

2. Zero-Burning Policy

Under the Group’s strictly enforced Zero-Burning Policy, the use of fire for any field operation purpose, including land preparation, new planting and replanting, is prohibited across the Group. The policy reflects our commitment in prohibition on land clearing by burning, consistent with Malaysian and Indonesian laws. It has been formalised in the Group Sustainability Policy since May 2009; applies to all companies within the Group and extends to the Group's contractors and suppliers.

3. No New Planting on Peat Policy

In line with its ‘No New Planting on Peat’ commitment, the Group has not developed any new plantings on peat after the cut-off date of 31 December 2015.

4. Fire prevention and response measures

The Group has the following measures in place:

- (a) the Landscape Inspection & Tracking Unified Platform (LiTUP), which uses NASA FIRMS satellite fire alerts (VIIRS and MODIS sensors) to detect hotspots and Copernicus Sentinel-1 and Sentinel-2 imagery to detect land clearing and encroachment. Alerts are sent automatically to designated estate managers and field teams, enabling an immediate response on the ground;
- (b) 28 trained firefighting squads comprising 425 firefighters, equipped in accordance with the Minister of Agriculture Regulation (Permentan) No. 6 of 2025;
- (c) daily ground patrols in three shifts, including at night, intensified during the dry season, with satellite alerts verified on the ground by trained teams;
- (d) 123 fire towers and 11 drones with trained GIS personnel for additional surveillance; and monitoring of, and response to, hotspots within a buffer zone of up to 2 km beyond the Group’s concession boundaries, carried out together with local communities through collective fire-prevention and response efforts; and
- (e) coordination with the Ministry of Forestry’s fire brigade (Manggala Agni), regional disaster agencies and neighbouring companies.

The Group spends in average, an estimated amount of RM 2.0 million per annum for the above measures.

5. Hotspot monitoring and response in 2026

Between January and 21 October 2026, no fire was detected within the Group's planted or operational areas, and there has been no report or any claim of any fire having been started by the Group's employees.

During the period, 274 hotspots were detected within the Group's estate boundaries and were all in community enclave areas, outside the Group's operational areas. The Group's field teams responded to and extinguished these fires, and police reports have been lodged in respect of these incidents.

For completeness, on 17 August 2026, a localised fire occurred within the Hak Guna Usaha area of the Group's subsidiary, PT Bulungan Citra Agro Persada ("BCAP"). The fire originated from a community enclave area outside BCAP's operational area. BCAP extinguished the fire on the same day, lodged a police report and continues to cooperate with the relevant authorities.

6. Certification

All of the Group's estates in Indonesia are certified under the Indonesian Sustainable Palm Oil (ISPO) scheme, which is subject to regular third-party audits.

7. Response to SGX's enquiry

Our responses to SGX's questions raised are set out below:

Question (a)

Whether any of the Group's operations, concessions or other assets in Indonesia have been affected by the recent forest and peatland fires. If so, please provide details.

Our Response

The Group's operations, concessions and other assets in Indonesia have not been affected by the recent forest and peatland fires.

Question (b)

The Group's assessment of whether any of its operations, concessions or activities in Indonesia have contributed, or may have contributed, to the recent haze, and the basis for that assessment.

Our Response

The Group's operations and activities within our concessions in Indonesia have not contributed to the recent haze.

Question (c)

Whether the Group has received any enquiries, allegations, notices or requests for information from government authorities, the media or other stakeholders in relation to the recent fires or haze. If so, please provide:

- (i) details of the matters raised;
- (ii) whether the Group has reviewed any allegations, claims or findings contained in the relevant reports and, if so, its views on those allegations, claims or findings and the basis for those views;
- (iii) the Group's response to the matters raised; and
- (iv) details of any ongoing investigations or follow-up actions.

Our Response

- We received an enquiry from one of our customers, Apical Group's Sustainability Department on 1 September 2026, with regards to the hotspots in PT Farinda Bersaudara. We have clarified that these hotspot incidents occurred within the community enclaves which are outside our operational area and Apical was satisfied with our clarification.
- These incidents have not been followed by any other official enquiries.
- No media highlights on TSH Resources and group of companies as of 15 October 2026.

Question (d)

The measures currently in place to prevent, monitor and respond to fires within the Group's operations and concessions in Indonesia, including any relevant no-burning policies, hotspot monitoring and firefighting arrangements, where applicable.

Our Response

- **Policy Commitment:** TSH's Group Sustainability Policy includes a zero burning policy that prohibits open burning across all operations and requires appropriate fire prevention measures and emergency preparedness programmes.
- **Fire Prevention and Response Procedures:** Established SOPs cover fire prevention, risk identification, firefighting, equipment inspections, emergency response and readiness, evacuation procedures and personnel training.
- **Hotspot Monitoring:** TSH's in-house LiTUP system integrates multiple satellite data sources to monitor hotspots within concession boundaries and a 2km-buffer zone, providing updates approximately every 3 hours to support early detection and timely response.
- **Firefighting Readiness and Community Engagement:** Firefighting infrastructure, equipment and trained squads are maintained in accordance with *Permentan No. 6 Tahun 2025*. Regular community engagement or Focus Group Discussion (FGD) sessions are also held to promote fire prevention awareness, and protection of HCV/HCS areas.

Question (e)

Whether the matters described above have resulted, or are expected to result, in any material operational, financial, legal, regulatory or reputational impact on the Group.

Our Response

The matters described above should not have any material impact on the Group.

Question (f)

Whether any information relating to the above matters is required to be disclosed via SGXNet. If the Company considers that no disclosure is required, please provide the basis for that assessment.

Our Response

Disclosure is not necessary because there has been no incident that might have a material impact on the Group. Furthermore, as stated under our response (d) above, we have instituted all necessary predictive, preventive and mitigation measures.

This announcement is dated 22 October 2026.
