[FOR IMMEDIATE RELEASE]

HEALTHWAY MEDICAL GROUP STRENGTHENS PATIENT CARE ECOSYSTEM THROUGH INTEGRATION OF SPECIALIST AND PRIMARY CLINICS ON TELECONSULTATION APP

- Teleconsultation app is the next step in Healthway Medical's digitisation journey
- Following SBCC Baby & Child Clinic, more specialist units will be integrated on the app in phases for greater patient accessibility and convenience

The new Healthway Medical app offers telemedicine services complementing its network of GP and specialist clinics in Singapore.

SINGAPORE, 22 OCTOBER 2020 - Healthway Medical Corporation Limited ("HMC" or the "Company"), one of Singapore's largest private healthcare providers, has announced that its paediatric unit, Singapore Baby and Child Clinic ("SBCC") has been onboarded onto its proprietary teleconsultation app. The Company will also integrate further specialist clinics into the app in the months ahead.

Since its official launch on 15 August 2020, the Healthway Medical app has onboarded 47 of its General Practitioner ("GP") clinics located islandwide. To provide patients with a full spectrum of holistic services, from primary to specialist and preventive care, HMC will continue to consolidate its vast network of primary and specialist clinics, with more than 100 doctors under the Healthway Medical app over a series of phases.

Empowering Healthier Lives

The Company will onboard Island Orthopaedics and the Nobel Group of clinics in the coming months. The Nobel Group encompasses specialist services such as Psychological Wellness, Gastroenterology and Cardiology.

Mr Abram Suhardiman, Deputy Chief Executive Officer of HMC, said, "The healthcare landscape continues to evolve as technology reshapes the way patients and healthcare providers interact, but patients remain at the core of this ecosystem. Moving away from a traditional acute care system to one of preventive care and disease management, patients will need timely access to a spectrum of medical assistance and advice to better understand the drivers that impact their health. With the launch of the Healthway Medical app, we have embarked on a omni-channel, technologically-enabled approach to unify our services and empower patients to better manage and address their individual healthcare concerns in collaboration with our team of healthcare professionals."

Dr Nelson Wee, Deputy Head of Primary Care of HMC, said, "The COVID-19 pandemic has accelerated the adoption and acceptance of telehealth services, particularly catering to those seeking medical assistance for non-COVID related concerns. While teleconsultations cannot replace the necessity of in-clinic care for a range of medical conditions, the provision of teleconsultation services facilitates more efficient doctor-patient interactions, especially when it comes to early diagnosis and preventive care. The ongoing digital transformation of traditional healthcare services will continue to play an important role in providing complementary holistic care for patients in tandem with in-clinic consultations."

In-home outpatient services with your regular doctor

With the app, patients can arrange a video consultation with a doctor up till 1030pm daily, with medication delivered to their doorstep. Beyond remote consultations, the app will also enhance the in-clinic experience of patients. With the app, patients can scan a QR code displayed at the registration counter of their regular GP clinic to confirm their details automatically. This provides regular patients with a seamless and hassle-free registration process during in-clinic consultations.

Comprehensive and holistic healthcare

HMC's integration of both primary and specialist clinics into the app is anchored on its vision of delivering comprehensive care by leveraging on innovative digital solutions. In line with the Company's ongoing digital transformation, onboarding its specialist doctors to the online platform will allow its diverse range of patients to safely and conveniently access teleconsultation across a broad spectrum of healthcare services, ranging from primary care to specialist services like paediatrics to gastroenterology.
