

FOR IMMEDIATE RELEASE

QT Vascular's Key Technologies Featured In Major International Conferences

- China Endovascular Course (CEC) and Innovations Cardiovascular Interventions (ICI) attended by vascular interventional experts from around the world
- Increasing recognition and adoption of QT Vascular's technologies from thought-leaders and distribution partners

Singapore, 17 December 2014 – Catalyst-listed QT Vascular Ltd. ("QT Vascular" or together with its subsidiaries, "the Group"), a developer and manufacturer of minimally invasive medical devices for the treatment of vascular diseases, is pleased to announce that several of its key technologies were recently featured in the scientific programs at two major international meetings, the China Endovascular Course (CEC) in Beijing and the Innovations in Cardiovascular Interventions (ICI) conference in Tel Aviv.

Speaking on behalf of the Group at CEC on 29 November 2014, Mr. Christopher Haig, Vice President of Corporate Development, delivered three presentations titled *Overview of a New PTA Balloon: GliderXtreme™*, *A New Treatment Paradigm for Peripheral Disease: The Chocolate® PTA Balloon* and *View to the Future: Drug-Coated Chocolate® Touch*. These presentations were closely followed on 15 December 2014, where Dr. Michael Jaff of Massachusetts General Hospital spoke in a highly attended session at ICI on *The Chocolate® Balloon: Does This Redefine Peripheral PTA?*

"The unique clinical value of our technology is being proven through clinical studies and increased market adoption," commented Dr. Eitan Konstantino, the Group's Chief Executive Officer. "Whether it is through our partnership with WEGO* in China or through collaboration with eminent physicians such as Dr. Jaff, the Group's products are receiving increasing recognition from thought leaders around the world."

About Peripheral Arterial Disease

Peripheral artery disease (PAD) is caused by the build-up of fatty substances that collect and adhere to the linings of the arteries, in a process known as atherosclerosis. The build-up causes the internal lining of the artery to thicken, narrowing the artery and limiting blood flow to vital tissues and organs. Commonly affected arteries include those located in the legs, arms, neck and kidneys. The vast majority of patients with PAD also have significant concomitant coronary artery disease (CAD) and a high proportion of morbidity and mortality in these patients is related to myocardial infarction, ischemic stroke or cardiovascular death. PAD is estimated to affect 202 million people worldwide ⁽¹⁾.

About Coronary Artery Disease

Coronary artery disease occurs when the coronary arteries (the arteries surrounding the heart) become narrowed by a buildup of plaque, including cholesterol, fatty deposits, calcium, and other substances. As plaque accumulates over time, the diameter of the arterial lumen, or inner channel, narrows, resulting in reduced or stopped blood flow. When this occurs in arteries supplying blood to the heart, it can cause chest pain, a heart attack, or even death.

About QT Vascular Ltd.

QT Vascular Ltd. (QT Vascular) is an emerging leader in the development and commercialization of next generation minimally invasive products for the treatment of complex vascular disease. The Company works closely with leading physicians and scientists from around the world to create differentiated devices that improve procedural and clinical outcomes. QT Vascular is based in Singapore with a US subsidiary, TriReme Medical LLC, in Pleasanton, California. The Company was listed on the Catalist Board of the Singapore Exchange Securities Trading Limited on 29 April 2014.
