- (A) Gross revenue and NPI have increased mainly due to contribution from one nursing home acquired in Japan in August 2024, and 11 nursing homes acquired in France in December 2024. In addition, the Singapore properties with step-up lease arrangements⁵ contributed to higher distributable income in 2025.
- (B) Higher trust expenses due to one-off professional fees incurred to restructure the holding structure of 4 France assets.
- (C) Finance costs have increased mainly due to funding of capital expenditure and Japan acquisition in 2024 and higher interest costs from Japanese Yen debts. Notwithstanding, interest cost on loans drawn down to fund Capex has no distribution impact as they are not subject to deduction when computing distributable income⁴ to Unitholders.
- (D) At the reporting date, the Group has outstanding forward exchange contracts with aggregate notional amounts of approximately \$115.0 million. A change in fair value of \$1.6 million gain in 2H 2025 was charged to the statement of total return.
- (E) The gain on disposal relates to the divestment of strata units and lots at MOB Specialist Clinics in Malaysia⁷ completed on 12 August 2025.

2. Net off interest income

3. Includes effect of recognising rental income on a straight-line basis over the lease term of the investment properties i.e. effective rent. There is no distribution impact arising from effective rent treatment

4. Distribution income is net of amount retained for capital expenditure (\$3m p.a.). Distribution adjustments are largely on net change in fair value of financial derivatives & investment properties, financing costs incurred for Capex, effects of recognising rental income on a straight-line basis and temporary differences

5. Referring to the new 20.4-year master lease agreements for its three Singapore hospitals

6. DPU for 2H 2024 includes an advanced distribution of 5.00 cents for the period 1 July 2024 to 31 October 2024 which was distributed to eligible unitholders on 26 November 2024. A total of 47,369,000 units were issued on 1 November 2024 pursuant to the equity fund raising exercise.

- (A) The increase in investment properties was largely due to the valuation gain (net of Capex) on the property portfolio. This was partially offset by the depreciation of the Japanese Yen and divestment of the Malaysia portfolio which was completed on 12 August 2025.
- (B) The increase in cash and cash equivalents was mainly contributed by net cash from operating activities (enlarged portfolio) offset by cash outflow on capital expenditure.
- (C) Apart from depreciation of the JPY, the overall decrease in total loans and borrowings was also attributed to a new 7-year committed and unsecured loan facility drawn down by the Group amounting to JPY6,250 million (approximately \$51.5 million) to pre-emptively take out a maturing \$81.8 million loan that had an accompanying SGD/JPY cross currency interest rate swap which matured in September 2025, partially offset by the net drawdown of \$59.4 million for funding of capital expenditure and working capital purposes. With that, there is no long-term debt refinancing needs till October 2026.

Capital & Financial Management

ParkwayLife REIT

Capital & Financial Management Strategy

5 Key Principles

Acquisition financing has to be long-term: at least 3 years or more

- Mitigates refinancing risk post acquisition

Diversify funding sources

- Traditional funding sources via bank loans and capital market financing products.
- May explore other non-traditional funding sources (e.g. perpetual bonds, convertible bonds, equity etc.)

Maintain an unencumbered portfolio for financing flexibility

- All new and existing banks will be ranked *pari passu*.
- May consider asset-level financing if tax and pricing considerations are optimal

Adopt natural hedge financing strategy to achieve stable net asset value

- Match asset currency with financing currency to mitigate principal forex risks arising from overseas acquisitions
- Aim to achieve at least 50% natural hedge on the portfolio basis; remaining 50% depending on the interest rate differential and nature of the currency involved

Prudent financial risk management strategy for distribution stability

- Mitigates risks from adverse interest rate and forex fluctuations
- Hedge at least 50% of interest rate and forex exposures on the net income from foreign investments.
- Aim to have no more than 30% of the total debts due in a single year, to avoid bunching effect and concentration risk
- Constantly monitoring the market to extend the debt maturity period

Debt Maturity Profile¹ – As at 31 December 2025

- Current weighted average term to maturity of 3.0 years

1. Excludes lease liabilities, if any.

2. As at 31 December 2025, short term loan amounted to JPY2,947 million (\$24.3m) was drawn down for working capital purposes.

Debt Headroom

- Healthy gearing¹ of 33.4% as at 31 December 2025
- Ample debt headroom of \$557.6 million and \$878.5 million before reaching 45% and 50%² gearing respectively.

1. Total Debts (exclude lease liabilities, if any) before transaction costs ÷ Total Assets

2. With effect from 28 November 2024, the gearing limit for S-REITs shall be 50% with a minimum ICR of 1.5x.
