

Press Release

DoMo Farm Breaks Ground as Singapore's Smartest Egg Farm

**Designed to produce more than 500 million eggs annually,
strengthening Singapore's food resilience**

SINGAPORE, 29 September 2026 – DoMo Farm, Singapore's fourth and smartest egg farm, breaks ground today in Lim Chu Kang, marking a new chapter in the Singapore Food Story.

DoMo Farm is owned by ISE Foods Holdings Pte Ltd ("IFH"), a subsidiary of Ellipsiz Ltd, with Unicore Agri and Vertex Holdings (via Vertex Exploratory Fund) as co-investors. Designed as a high-technology egg farm, DoMo Farm will have the capacity to produce more than 500 million high-quality, nutritious eggs annually. Construction of the first phase of the Farm will take under two years to complete, and DoMo Farm's eggs are expected to hit store shelves in 2028.

In a market that consumed more than 2.2 billion eggs in 2025, Singapore's existing local egg farms supplied about one-third of domestic consumption, with imports providing the balance. Against this backdrop, DoMo Farm is poised to make a meaningful and lasting contribution to Singapore's local egg supply and food resilience.

"Today marks an important milestone for DoMo Farm and Singapore's local egg production. The name DoMo reflects our pursuit of excellence and our ambition to do more with less: to produce more food while making better use of our limited resources. We are proud to play our part in Singapore's Grow Local pillar of the Singapore Food Story 2, bringing us closer to the nation's food security road map," said Mr David Ong, Chairman of IFH. The groundbreaking ceremony will be officiated by Ms Grace Fu, Minister for Sustainability and Environment and Minister-in-charge of Trade Relations.

Integrated approach to smart farming

Purpose-built from the ground up, DoMo Farm will house 1.8 million egg-laying hens when fully operational. At the heart of this highly automated Farm will be DoMo Farm's integrated operating model built around one clear principle: ***One Farm, One Central Command and One Intelligent Control System.***

The Three-Ones model brings the Farm's suite of advanced farming technologies and modern farming operations together, using real-time operational data, artificial intelligence (AI), smart sensors, and the Internet of Things (IoT) to improve productivity, workforce efficiency, climate resilience, and sustainability.

Timeline

In the initial phase, DoMo Farm plans to build nine layer houses and three pullet houses for 1.35 million layers¹ and 450,000 pullets², respectively, with an annual production capacity of about 380 million eggs.

When fully developed, the Farm will have twelve layer houses and four pullet houses for 1.8 million layers and 600,000 pullets, respectively, supporting a designed capacity of more than 500 million eggs annually. Production capacity will be progressively ramped up in tandem with market conditions.

Strengthening our local egg supply chain

DoMo Farm is also committed to strengthening its egg production supply chain by moving upstream and establishing Parent Stock and Hatchery capabilities in the next phase. This will help reduce the Farm's reliance on imported Day-Old Chicks and provide greater resilience in the supply of egg-laying hens.

Together, these initiatives underscore DoMo Farm's commitment and long-term investment in Singapore's food future.

The development of DoMo Farm is partially financed by Maybank through a term loan facility of up to S\$65 million, with the bank serving as the Farm's sole financing partner for this project, in alignment with its sustainability mandate.

===== End =====

¹ Layers are female egg-laying chickens.

² Pullets are young, female chickens less than a year old that have not yet started laying eggs.

About Ellipsiz Ltd

Founded in 1992 and listed on the SGX Mainboard since July 2000, Ellipsiz is a leading provider of integrated solutions in the semiconductor and electronics manufacturing industries, headquartered in Singapore. The Group's principal activities today span distribution and services solutions, property investment and development, and sports, recreational and lifestyle. Ellipsiz has also expanded into the agri-food sector, leveraging smart agri-technologies to develop sustainable egg farming solutions in Singapore. For more information, visit www.ellipsiz.com.

About Unicare Agri

Unicare Agri Pte Ltd, incorporated in Singapore on 7 March 2025, is the agri-food arm of Unicare Resources Pte Ltd, established to develop the Group's investments in sustainable agriculture. Founded in March 2013 and headquartered in Singapore, Unicare Resources is an international commodities trading and investment group. Its core business is the trading of iron ore, pellets, manganese ore, coal and steel, serving steel mills across China and Southeast Asia, alongside metals and energy products, and the Group has in recent years diversified into shipping assets and long-term investments.
