

SUSTAINABILITY REPORT OF ASIAPHOS LIMITED FOR THE FINANCIAL YEAR ENDED 31 DECEMBER 2020

About this Report

AsiaPhos Limited (hereafter referred to as “AsiaPhos” and collectively with its subsidiaries, the “Group”) has been listed on the Catalist board of the Singapore Exchange Securities Trading Limited (“SGX-ST”) on 7 October 2013.

The Group was organised into product units as follows:

- (a) upstream segment relates to the business of exploration, mining and sale of phosphate rocks; and
- (b) downstream segment relates to the business of manufacturing, sale and trading of phosphate-based chemicals products such as P4, sodium trimetaphosphate/tripolyphosphate and sodium hexametaphosphate; and the sale of P4 by-products, such as slag, sludge and ferrophosphate.

The Board is pleased to present the Group’s annual Sustainability Report (the “Report”) covering the period from 1 January 2020 to 31 December 2020 (the “reporting period”). This Report is set out on a “comply or explain” basis in accordance with [Rule 711B](#) and [Practice Note 7F](#) of the Singapore Exchange Securities Trading Limited (“SGXST”) Listing Manual Section B: Rules of Catalist (the “Catalist Rules”). AsiaPhos has chosen the Global Reporting Initiative (“GRI”) Standards as it is an established international sustainability reporting standard and in respect of the extent to which such framework is applied, this Report has been prepared in accordance with the GRI Standards: Core Option, and should be read in conjunction with AsiaPhos’ [Annual Report for the financial year ended 31 December 2020](#).

Information on our projects can be found on our website: www.asiaphos.com and in AsiaPhos’ [Annual Report](#). This year’s Sustainability Report has removed references to the upstream (mining) segment, following its classification as a discontinued operation in the Group’s financial results; Accordingly, we have also removed mining-related references to the [qualified person’s report \(QPR\)/ technical report](#) prepared by independent geologists Watts Griffis & McQuat (WGM),

where applicable, in compliance with the requirements of Practice Note 4C of the Catalist Rules. However, those mining-related details are available via the company website and SGXNET/previous company announcements.

As announced by AsiaPhos on SGXNet on [27 April 2018](#), with effect from 27 April 2018, the Group will focus on chemical operations and no longer be deemed as a “mineral, oil and gas company” (“MOG”) as defined under the Catalist Rules. As such, the Group did not instruct WGM to prepare a QPR for the financial year ending 31 December 2019.

In June 2018, the Group shut down the furnaces for maintenance and has not resumed production due to the lack of phosphate rocks, as a result of the Chinese government’s actions which deprive the Group of access to its phosphate rocks which is a key raw material for cost efficient production of P4. Due to Government's wrongful action, we are currently not carrying out exploration and mining activity and also not producing P4. Downstream operations have been limited to processing and trading while negotiating with the Chinese Government and the report has to be read in this context. This report excludes the impact of the smaller polyphosphate plant, following the entry into rental and cooperation agreements with Lianyungang Zexin (for further details, please refer to the Group’s SGXNET announcements).

As disclosed in the announcement dated 11 August 2020, the Group has submitted its request for Arbitration to the Chinese Government. As the process for arbitration is now underway, the Group is required to observe confidentiality. However, the Group is mindful of its obligations under the Catalist Listing Rules, and as long as Norwest Chemicals Pte Ltd and its subsidiaries remain part of the Listed Group, the Company will make announcements on SGXNET whenever there are material developments with respect to the arbitration or negotiation with the Chinese Government.

Should the negotiations fail to result in an amicable resolution of the dispute, the Group reserve its rights to submit the dispute to international arbitration under the China-Singapore Bilateral Investment Treaty and the ASEAN-China Investment Agreement. The ongoing negotiations will not prejudice our right to pursue international arbitration proceedings if no settlement is reached.

Trading conditions during FY2020 remained challenging, and were impacted by the COVID global pandemic. Management continues to try to expand the geographical base of the Group's customers of downstream phosphate chemicals (such as STPP and STMP) produced by our tenant and cooperation partner Lianyungang Zexin.

As announced during 4Q2020, the Company has entered into a non-binding term sheet with Mining and Minerals Industries Holdings Pte Ltd to acquire the entire share capital of MMJV Pte Ltd that would constitute a reverse take over. As announced on 13 November 2020, the Company and Mining and Minerals Industries Holdings Pte Ltd (the "Vendor") on 12 November 2020 entered into a sale and purchase agreement (the "SPA") with the Vendor to acquire the entire issued and paid-up share capital of the Target Company subject to the successful completion of terms and conditions of the SPA. As announced on 7 April 2021, the Company has (on 6 April 2021) issued a termination notice to the Vendor to terminate the SPA with immediate effect in accordance with the terms and conditions of the SPA. Management will provide updates as and when there are material developments.

This report will be available via SGXNET and the company website.

(Date of Report = 7 May 2021)

Board Statement / Sustainability Statement of Management

On behalf of the Board of Directors (the “Board”) and the management, we are pleased to present AsiaPhos’ Sustainability Report.

‘Confirmation Statement’: “The Board has considered sustainability issues as part of its strategic formulation, determined the material ESG factors and overseen the management and monitoring of the material ESG factors.”

As mentioned in the Annual Report / SGXNET announcements, it has been an extremely challenging few years for the Group since 2017, as our mining operations in Mines One and Two were interrupted, following requests from the Mianzhu City Government to vacate and rehabilitate Mine 2 and the Fengtai Mine, in addition to the non-renewal of the Mine 1 mining licence. This government action has also deprived our P4 operations of locally mined phosphate rocks and resulted in the suspension of P4 processing. Please refer to our recent corporate announcements on SGXNET and/or our website, for updated information relating to these negotiations and our operations. The report which follows describes our policies and procedures which were in place before the actions of the Mianzhu Government and is presented to comply with [Rule 711B](#) and [Practice Note 7F](#) of the Singapore Exchange Securities Trading Limited (“SGXST”) Listing Manual Section B: Rules of Catalist and may not be representative of the situation prevailing now because of the reduction of the Group’s activities.

We have a sustainability workgroup (the “Workgroup”) which reports to the Board. This Workgroup reviews the environmental, social and governance factors (the “ESG Factors”) identified as material to AsiaPhos. The Board recognises the importance of sustainability practices and how it can benefit our Group’s business operations and performance. Working closely with the management, the Board oversees the management and monitoring of the ESG Factors that have been determined to be material to our business and our stakeholders, and takes them into account when formulating strategic policies and initiatives for AsiaPhos.

The COVID pandemic has also impacted our operations and trading conditions remain challenging. We would like to record our appreciation to our stakeholders (including employees, customers, suppliers and other partners), for your continued efforts and support for Asiaphos. For our employees, these changes include reinforcing safe distancing measures and implementing flexible 'work from home' arrangements to the extent possible (post-lockdown/ 'circuit breaker' periods).

Likewise, for our customers and suppliers, there have been challenges with regards to supply chain management and logistics planning. Significant efforts (and mutual understanding) from all parties to manage these risks and minimise disruption has helped us to fulfil contractual obligations whilst also strengthening these partnerships.

Corporate Social Responsibility

As a resource-based chemical operations business, we are always aware of our responsibility towards the environment, our employees and the local community. While focusing on creating wealth through our chemical operations, we strive to make good use of and conserve resources, protect our environment, improve the welfare of our employees, and facilitate social and economic development of the neighbouring areas. While we expand our business operations, we continuously strive to ensure that the requirements of a responsible corporate citizen are embedded within our daily operations.

Environmental and safety

The Group is committed to protecting the natural environment of the vicinity where we conduct our operations.

In planning our operations, we are always conscious of the safety requirements and have always challenged ourselves to surpass the requirements and continuously strived to improve the existing operating environment. Currently, the company's operations are focused on sales and trading of phosphate products.

Targets: Our infrastructure has been constructed to comply with the applicable environmental laws, rules and regulations of the People's Republic of China ("PRC"). Our environmental management strategies and objectives also include effective air and water recycling measures as well as proper handling and disposal of waste.

We also conduct regular monitoring exercises to ensure that we comply with the environmental regulations in relation to our operations. We intend to continue to take progressive steps to further improve our PRC operations and facilities beyond the requirements of applicable PRC environmental laws, rules and regulations. For example, instead of releasing the flue gas produced during P₄ production into the environment, we collect and used the gas for drying phosphate rocks, coke and silica as well as our other downstream operations so as to reduce the impact on the environment (with the benefit of potentially lowering production costs for downstream chemicals).

Since we started our business operations, we have been cultivating a "Safety is Priority" culture, which focuses on building essential safety and eco-friendly processes, resulting in continued improvement and general awareness of safety and environmental protection amongst our employees.

We have implemented safety management system, which includes safety management plans, rules, codes of practice, manuals and procedures which our employees are required to comply with. We take active steps to ensure that our employees understand and familiarise themselves with our safety rules. Briefings on safety awareness and procedures are conducted regularly and training on basic safety skills and procedures are conducted for our employees. We ensure that our workers possess safety permits obtained after attending training organised by the relevant local safety and inspection authorities before they undertake any work at our premises. All our employees have a mandate to target zero injuries and fatalities (target met in FY2020).

We have a safety and environmental team which implements and promotes applicable legal and internal safety regulations, including i) conducting periodic safety audits and ensuring safety requirements are met; ii) conducting in-house or outsourced safety training for all our employees as well as outsourced workers; iii) conducting investigations and

handling all incident reports and implementing pre-emptive measures to prevent repeat occurrence of such incidents; iv) liaising with all external safety authorities and implementing new safety regulations and initiatives; and v) reviewing and improving our safety management system in accordance with the applicable legal regulations.

We have invested a substantial amount of the capital expenditure for our P₄ plant in environmental and safety features, ensuring that we have control over monitoring every aspect of the entire production process. Fire drills are an important part of our fire safety procedures. In addition, emergency evacuation drills for the entire factory are also conducted. In the event of an accident or natural disaster, we are able to activate emergency response measures and limit the potential damage.

We are subject to regular and ad hoc inspections by the local safety authorities to ensure that the requisite safety requirements are met before we are allowed to continue with our operations.

We recognise that environmental monitoring is an ongoing obligation. We will continue to improve our safety and environmental protection efforts. We will continue to invest in safety features for our operations.

Employees

The Group strives to further improve on human resource recruitment, training, appraisal and remuneration management.

The Group has standardised its form of employment, so as to ensure that the basic rights and interests of employees are protected, and to maintain good labour relations. We have purchased all necessary insurance for the employees in accordance with the relevant labour laws. We ensure that our employees and our outsourced workers pass the relevant health checks, possess social and commercial insurance before they undertake any work at our premises.

The Group is committed to staff upgrading. Where necessary for the scope of work, the Group sends employees to attend training, courses and seminars relevant to their scope of work, including orientation training for new employees, training for middle and senior management, professional training on geological exploration and safety training.

Social

We strive to make a positive impact on the lives of people who live in the areas where we have a presence. We, as far as possible, employ local workers and provide these workers with relevant training and skills development.

The Group is committed to be in strict compliance with the laws, responding positively to government policies, paying taxes in due course, and helping to improve local employment, thus making significant contribution to the local fiscal revenue.

We seek to support and promote local businesses and economic activities by engaging them as suppliers. [ACA: please confirm that the Company still participate in community projects in Mianzhu and support local business in FY2020] Whenever possible, we procure our raw materials from local suppliers within the vicinity of our operations.

Figure 1(Photo): (Sign board at entrance of our downstream chemical operations factory premises): "Safety is at our Core" and "Focus on Environment: Everyone's responsibility"

“安全在心中 追求安全生产是企业发展的基础；
环保在手中 参与环保行动是你我他的责任”

Our Sustainability Achievements

P₄ Flue Gas Integrated Utilisation Technology Improvement Project

- Objectives: To re-use flue gas to save energy and reduce gas emissions (CO) discharge
- Uses of flue gas: raw material drying, steam generation from flue gas boilers, heating source for separate polyphosphate plant (e.g. STPP)
- Received grant under 2015 Mianzhu City industrial development reward program

Sustainable Practices at various stages of P₄ production

- P₄ plant designed to comply with PRC environmental law
- Practices water recycling, off gas collection and slag disposal at a nearby cement operation
- Practices lauded in Sichuan newspaper report

Monetary Contribution to Forest Recovery

- Contributions to Deyang Forestry Bureau for timberland compensation and forest recovery
- Further monetary provision for rehabilitation and reforestation upon closure of mine

Implementation of Efficiency Initiatives

- P₄ production process reviewed to reduce electricity consumption

ASIAPHOS

Identifying and prioritizing the Material ESG Factors / 'Material Topics and Boundaries'

We have three levels of disclosure based on the importance of the issues to the Group and its stakeholders.

Critical Factors / Focus Areas	Monitored Activities	Positions
<p>We share our views, we measure and evaluate performance, and <u>we have set or plan to set goals or quantitative targets</u> on the most important issues</p>	<p>We share our views, we measure and evaluate performance on these issues to sustain the trust and confidence of our stakeholders, and for us to be a responsible business</p>	<p>We share our views on the issues that engage public interest and have a bearing on our business</p>
<ul style="list-style-type: none"> • Energy consumption • Emissions (GHG/etc) • Waste/ water management • Health & Safety <p>Targets: For these material factors, our policies and procedures are designed to ensure compliance with the applicable laws, rules and regulations in the jurisdictions in which we operate.</p>	<ul style="list-style-type: none"> • Corporate conduct / Anti-corruption • Corporate governance • Environmental compliance • Product responsibility • Forestry / Biodiversity • Key Stakeholders Engagement / Labour relations • Local communities / supporting local employment / economy • Customer Satisfaction • Physical & Cyber security • Work outsourced to third parties (e.g., freight and logistics) 	<ul style="list-style-type: none"> • Recycling/Recovery: P4 flue gas (and other waste/ by-products) integrated utilisation technology improvement • Training & education • Responsible usage of scarce natural resources

Environmental Governance:

- . Internal and external environmental monitoring are conducted to ensure compliance with the policies of the Group and regulatory requirements
- . Licenced third-party environmental consultants assist with detailed environmental impact assessments for new projects and as part of the licence applications process

Energy Consumption / Emissions

Chemical operations are energy-intensive. Efforts are made towards continuous improvement of our operations and facilities, i.e. beyond the requirements of applicable PRC environmental laws, rules and regulations. For example, instead of releasing the flue gas produced during P4 production into the environment, we collect and used the gas for our other downstream operations so as to reduce the impact on the environment (with the benefit of potentially lowering production costs for downstream chemicals).

“The phosphate ore, coke and silica are each dried using the thermal energy from the recycled waste flue gas and then stored in appropriate silos from which they are then conveyed in their appropriate rations into the feed bin for the P4 furnaces.” (WGM QPR, 2018-3-16, Page 20)

In June 2018, the Group shut down the furnaces for maintenance and has not resumed production due to the lack of phosphate rocks, as a result of the Chinese government’s actions which deprive the Group of access to its phosphate rocks which is a key raw material for cost efficient production of P4. Our P4 Plant is designed to operate in compliance with applicable PRC environmental laws, rules and regulations, and practises water recycling and off gas collection as well as slag disposal at a nearby cement operation. Environmental monitoring and sampling conducted confirmed that groundwater/wastewater, emissions/exhaust gas and noise remained within the required national standards.

Waste / water management

(WGM QPR, 2018-3-16, Page 20 onwards): [Downstream operations] *“All the water used in the cooling towers and other processes is collected and stored in a waste water pool, from where it is treated and then recycled. The waste gasses from the cooling tower, which contain about 80-90% CO are captured and used as energy for the drying of the raw materials and steam boilers after being cleaned and alkali rinsed. The slag is sold for other industrial processes including cement manufacture.”*

(WGM QPR, 2018-3-16, Page 53 onwards): *“The Plant includes gas scrubbers and water treatment facilities to better control environmental issues. The quality of construction at the Plant location, the site layout with more extensive gas scrubbing, and water containment and treatment has proven that the Plant provides Mianzhu Norwest with a substantial improvement in their operation and better control of any environmental impacts.”*

(WGM QPR, 2018-3-16, Page 124 onwards): *“The processing plant also has a closed circuit water recycling system, which is compliant to Chinese national standard for water treatment for chemical factories. The recycled water is a source of supply to daily operations in the processing plant. A back-up diesel generator has also been installed to mitigate any disruptions to electricity supply.”*

Health & Safety

Our processing plants were designed to comply with applicable PRC environmental laws, rules and regulations.

We are subject to regular and ad hoc inspections by the local safety authorities to ensure that the requisite safety requirements are met in order to be allowed to continue with our operations.

The training that we provide can be divided into basic training, compulsory training and supplementary training, and may be conducted in-house or outsourced to external trainers.

Basic training includes orientation training and occupational safety training. Orientation training is conducted to educate our new employees on company policies and basic skills and knowledge which would be relevant to their respective job functions, such as the operation of relevant machinery and equipment. Occupational safety training is conducted to equip our employees on occupational safety and to educate them on safety standards and precautions to be undertaken in the course of their work.

Compulsory training: As required by applicable PRC laws, rules and regulations, including continual professional education on an annual basis, in particular for engineers and employees engaged in our chemical production operations. Such training is typically organised by the relevant accrediting organisations, governmental bodies and quality assurance associations.

Supplementary training: Conducted to enhance the skills of our employees, including training to update them on the latest development trends and technologies and personal improvement. Selected employees may be sent for external short term training courses. For example, our finance staff may attend courses and seminars conducted by external organisations to keep abreast with changes in accounting requirements.

Key Stakeholders Engagement

These disclosures give an overview of our Group's approach to stakeholder engagement.

Stakeholder consultation is undertaken through formal and informal communication on an ongoing basis.

Stakeholders	How we engage	Key Topics Raised	Refer to Sections
Employees	.Annual performance reviews .Workplace health and safety	.Employment prospects/ continuity of business / career advancement / health & safety	'Our People'
Communities	.Providing employment/ support local economy .Participate in local community projects .EIA (Environmental Impact Assessments) /Projects & Public Consultation	.Financial support to the community	.Corporate Social Responsibility: Social/ Procurement Practices; WGM QPR (Chapter 20)
Government and Regulatory Bodies	.Meetings/ Reports/ Applications .Site visits .Reports from 3 rd -party independent consultants (e.g. QPR)	.Environmental matters .Compliance with PRC laws & regulations .Applications for conversion/ renewal of licences	.Overall report (SR/AR); . WGM QPR ; .Corporate website ('Announcements' section)
Suppliers/ Contractors	.Meetings	.Procurement to support local economy . Business continuity .Compliance with applicable PRC laws, rules & regulations	.Social/ Procurement Practices

Our People

As at 31 December 2020, the Group employed a total of 10 employees. The Group strives to further improve on human resource recruitment, training, appraisal and remuneration management.

The Group has standardised its form of employment, so as to ensure that the basic rights and interests of its employees are protected, and to maintain good labour relations. We purchased all necessary insurance for the employees in accordance with the relevant labour laws. We ensure that our workers pass the relevant health checks, possess social and commercial insurance before they undertake any work at our premises.

The Group is committed to staff upgrading. Each year, the Group sends employees to attend training, courses and seminars relevant to their scope of work, including orientation training for new employees, training for middle and senior management, professional training on geological exploration and safety training.

The employees of Sichuan Mianzhu Norwest Phosphate Chemical Co., Ltd ('SMNPC'), a subsidiary of the Group that was incorporated in the PRC, are organised under a trade union formed to protect the legal interests of such employees. The relationship and level of co-operation between our management and the trade union have been strong. There have not been any incidences of work stoppages or labour disputes arising from trade union disputes which have affected our operations in any material respect.

Social / Procurement Practices

We strive to make a positive impact on the lives of people who live in the areas where we have a presence. We, as far as possible, employ local workers and provide these workers with relevant training and skills development.

The Group is committed to be in strict compliance with the laws, responding positively to government policies, paying taxes in due course, and helping to improve local employment, thus making significant contribution to the local fiscal revenue.

We also participate in local community projects in the vicinity of our business operations in Mianzhu City, Sichuan Province, PRC. [ACA: as per previous comments, does this sentence remain valid for FY2020?]

We seek to support and promote local businesses and economic activities by engaging them as suppliers. Whenever possible, we procure our raw materials from local suppliers within the vicinity of our operations.

SGX 'Primary Components for Sustainability Reporting' Index (Source: SGX [Practice Note 7E](#))

#	Primary Component	Section Reference
1	Material ESG Factors	.Identifying and prioritizing the Material ESG Factors / 'Material Topics and Boundaries'
2	Policies, Practices and Performance	Board Statement / Sustainability Statement of Management
3	Board Statement	Board Statement / Sustainability Statement of Management
4	Targets	.Board Statement / Sustainability Statement of Management . Identifying and prioritizing the Material ESG Factors / 'Material Topics and Boundaries' (Targets = "to ensure compliance with the applicable laws, rules and regulations in the jurisdictions in which we operate. ")
5	Framework	'About This Report'

4. Contents of Sustainability Reporting

Primary components

4.1 The sustainability report should comprise the following primary components:

- (i) Material ESG factors.** The sustainability report should identify the material ESG factors, and describe both the reasons for and the process of selection, taking into considering their relevance to the business, strategy, business model and key stakeholders.
- (ii) Policies, practices and performance.** The sustainability report should set out the issuer's policies, practices and performance in relation to the material ESG factors identified, providing descriptive and quantitative information on each of the identified material ESG factors for the reporting period. Performance should be described in the context of previously disclosed targets.
- (iii) Targets.** The sustainability report should set out the issuer's targets for the forthcoming year in relation to each material ESG factor identified.
- (iv) Sustainability reporting framework.** The issuer should select a sustainability reporting framework (or frameworks) to guide its reporting and disclosure. The sustainability reporting framework(s) selected should be appropriate for and suited to its industry and business model. The issuer should state the name of the framework(s), explain its reasons for choosing the framework(s) and provide a general description of the extent of the issuer's application of the framework(s).
- (v) Board statement.** The sustainability report should contain a statement of the Board on the Board having considered sustainability issues as part of its strategic formulation, determined the material ESG factors and overseen the management and monitoring of the material ESG factors.
