Proven track record of financial conservatism and strong management committed to the long term

Macroeconomic Outlook

Trade Tensions Cloud China's Outlook but Low Risk of Hard Landing

- The Chinese economy has its underlying momentum, supported by rebalancing reforms and steady jobs market.
- Low central government debt underpins China's fiscal capacity, which could help mitigate "black swan" events.
- Base case scenario: 2018 GDP to remain in line with the official target of "about 6.5%" growth, trade tensions with US to pose more downside risk in 2019, this together with US monetary tightening would result in more volatility in capital flows and RMB. PBoC has eased credit conditions and used its fiscal levers to provide targeted support.

- Our steeper Fed rate trajectory in 2018 is still intact. After the June rate hike, we expect two more 25bp-hikes in 2H18 (Sep and Dec), bringing the FFTR to 2.50% by end-2018. Balance-sheet reduction – which began in October 2017 – is set to continue in 2018 and reach its equilibrium level in 2019. A higher degree of convergence in global rates with the US is expected in 2H18, with the exception of Japan.
- Growth in regional economies remains generally firm in 1H18. US-China trade tensions could increase downside risks to growth from 2H18 but our base case remains that parties are likely to work to prevent an all-out trade war. Even as inflation is still very benign, the monetary policy bias remains tilted towards normalisation in 2018, in line with the tightening signals from the G10 central banks. Tariffs and elevated oil prices could add to inflationary pressure ahead.
- Capital flight remains a risk for Asia as the currencies are likely to weaken further in 2H18, and could be worsen if trade tensions escalate. Economies with current account and fiscal deficits could be pressured to tighten their monetary policy.
- Short-term interest rates in Singapore are expected to increase further in 2H18 alongside our expectations for higher Fed rates.

Singapore GDP Growth to Moderate in 2H18

- 2Q18 GDP grew at a slower pace of 3.8% yoy (1Q18: +4.3%), due to a slower expansion in the services and manufacturing sectors. But these sectors are still growing at a healthy clip, leading to positive spillovers into non-trade sectors. Going forward, the slowdown in the tech cycle and global trade tensions may result in slower growth in 2H18.
- Domestically, the MAS had started normalising the SGD NEER policy (exp: 0.5% pa) in Apr'18, due to higher core inflation. The MAS is likely to keep this stance in the upcoming Oct'18 meeting.
- We maintain 2018 GDP growth forecast at 2.8%.

- Each regulator determines its own level of countercyclical capital buffer.
- According to the regulations, Indonesia D-SIBs will initially be subject to a D-SIB buffer of up to 2.5%.
- In China, G-SIBs are only subject to the higher of G-SIB and D-SIB buffer
- Minimum ratios on fully-loaded basis, including capital conservation buffer and D-SIB surcharge, but excluding countercyclical capital buffer and G-SIB surcharge

Banking Regulations Still Evolving

“ Banks need to be profitable in order to be strong. Retained earnings are one of the major sources of equity – which is the highest quality capital that banks hold. Banks also need to be profitable to be able to support the real economy. They have to earn a decent return for intermediating credit, otherwise they will do less of it. ”

– Mr Ravi Menon, Managing Director, Monetary Authority of Singapore, 20 April 2017

“ ...certain liabilities should be excluded from the scope of bail-in because their repayment is necessary to ensure the continuity of essential services and to avoid widespread and disruptive contagion to other parts of the financial system. The proposed scope of bail-in would hence exclude liabilities such as ... senior debt and all deposits. ”
