AJJ Healthcare Secures Long-Term Contract for Biodegradable Medical Consumables with Singapore Healthcare Institutions

The Board of Directors (the "**Board**") of AJJ Medtech Holdings Limited (the "**Company**", and together with its subsidiaries, the "**Group**") is pleased to announce that its wholly-owned subsidiary, AJJ Healthcare Management Pte. Ltd. ("**AJJ Healthcare**"), has secured a significant long-term supply contract with a network of Singapore healthcare institutions.

The contract, with an aggregate contract value of approximately S\$3 million, involves the supply of biodegradable medical consumables over a tenure of two (2) years commencing on 1 June 2026, with an option to extend for a further two (2) years, subject to the terms of the award. This award supports the Group's strategy to expand its portfolio of sustainable healthcare solutions and represents a meaningful milestone in the Group's Environmental, Social and Governance ("**ESG**") initiatives.

Institutional Contract Milestone

This contract follows a series of institutional awards secured by AJJ Healthcare. Together with recent multi-year agreements to supply medical and laboratory consumables to healthcare institutions and academic partners in Singapore, these contracts form a growing institutional revenue pipeline, with total contracted value exceeding S\$8 million, to be recognised over their respective contract tenures of between three (3) to five (5) years.

These developments reflect the Group's expanding footprint within the institutional healthcare segment and strengthen its position as a long-term supply partner within the national healthcare ecosystem.

Business Impact

The Board is of the view that this contract award:

- provides recurring revenue visibility over the contract period;
- further strengthens the Group's institutional customer base; and
- is aligned with the Group's long-term sustainability strategy.

This contract is not expected to have a material impact on the Group's Net Tangible Assets or Earnings Per Share for the current financial year, but is expected to contribute positively to the Group's financial performance over the duration of the contract.

ESG-Related Disclosure (Environmental Impact)

Based on the Group's internal lifecycle carbon accounting model, the contract is expected to avoid more than 600 tonnes of fossil-based CO₂ emissions per annum, equivalent to removing more than 100 passenger vehicles from the road each year. Further details on the methodology and assumptions will be disclosed in the Group's upcoming ESG report, scheduled for publication in April 2026.

Calculation Framework

The estimated emission reduction is derived using the following framework:

$$\text{Emission Reduction} = \text{Substituted Material Mass} \times \text{Fossil Carbon Content Ratio} \times \text{CO}_2 \text{ Conversion Factor}$$

Key assumptions applied for this contract:

- Substituted material mass: approximately 252 tonnes per annum
- Fossil carbon content ratio: 0.75
- CO₂ conversion factor: 3.67

These estimates are subject to variations based on actual usage patterns, product mix, and operational conditions.

The Board will make further announcements as and when there are material developments.

BY ORDER OF THE BOARD

Zhao Xin
Chief Executive Officer and Executive Director
