RESULTS OF OPERATIONS

Net operating income, a non-GAAP⁽¹⁾ financial measure, has been used consistently by Globe Life's management for many years to evaluate the operating performance of the Company, and is a measure commonly used in the life insurance industry. It differs from net income primarily because it excludes certain non-operating items such as realized investment gains and losses and certain significant and unusual items included in net income. Management believes an analysis of net operating income is important in understanding the profitability and operating trends of the Company's business. Net income is the most directly comparable GAAP measure.

MANAGEMENT VS. GAAP MEASURES

Shareholders' equity, excluding AOCI, and book value per share, excluding AOCI, are non-GAAP measures that are utilized by management to view the business without the effect of changes in AOCI, which are primarily attributable to fluctuation in interest rates. Management views the business in this manner because it creates more meaningful and easily identifiable trends, as we exclude fluctuations resulting from changes in interest rates. Shareholders' equity and book value per share are the most directly comparable GAAP measures.

INSURANCE UNDERWRITING INCOME

Insurance underwriting margin is management's measure of profitability of the Company's life, health, and annuity segments' underwriting performance, and consists of premiums less policy obligations (excluding interest on policy liabilities), commissions and other acquisition expenses. Insurance underwriting income is the sum of the insurance underwriting margins of the life, health, and annuity segments, plus other income, less administrative expenses. It excludes the investment segment, interest on debt, Parent Company expense, stock compensation expense and income taxes. Management believes this information helps provide a better understanding of the business and a more meaningful analysis of underwriting results by distribution channel. Insurance underwriting income, a non-GAAP measure, is a component of net operating income, which is reconciled to net income in the Results of Operations section above.

The following table summarizes Globe Life's insurance underwriting income by segment for the three months ended March 31, 2023 and 2022:

INVESTMENTS

Management uses excess investment income as the measure to evaluate the performance of the investment segment. It is defined as net investment income less the required interest attributable to policy liabilities. We also view excess investment income per diluted common share as an important and useful measure to evaluate performance of the investment segment, since it takes into consideration our stock repurchase program.

The following table summarizes Globe Life's investment income, excess investment income, and excess investment income per diluted common share.

	Excess Investment Income

(1) Interest on policy liabilities is a component of total policyholder benefits, a GAAP measure. The amounts presented for 2022 have been retrospectively adjusted to exclude the interest on deferred acquisition costs due to the LDTI standard and the interest on debt.

Net investment income increased 5.0%, and average invested assets increased 3.5%. Required interest on policy liabilities increased 4.0%, and average policy liabilities increased 4.3%.
