

PRESS RELEASE

FOR IMMEDIATE RELEASE

Sarine Technologies Releases Meteor™ System for Inclusion Mapping of Smaller Stones Segment

Kfar Saba, Israel, 01 October 2015 – Singapore Exchange Mainboard-listed Sarine Technologies Ltd ("Sarine") (U77:SI), a worldwide leader in the development, manufacture and sale of precision technology products for the evaluation, planning, processing, finishing, grading and trade of diamonds and gemstones, is pleased to announce the official release of its new Meteor™ system for inclusion mapping of smaller stones, following a successful beta phase.

Based on Sarine's renowned Galaxy™ solution, the Meteor™ system is designed to provide faster, cost effective inclusion mapping for the much broader 0.25-0.85ct segment of rough diamonds. Beta trials of the Meteor™ device were undertaken at three large diamond manufacturers, with the Meteor™ demonstrating outstanding success, scanning more than 220 stones per day, thereby substantially accelerating the scanning throughput for manufacturers, further reducing the cost of ownership and use of the system.

Uzi Levami, Chief Executive Officer of Sarine, stated, "The release of the Meteor™ system to the market is an important step in making Sarine's advanced inclusion mapping technology accessible to a significantly wider range of stone sizes. The proven Galaxy™ technology is now implemented in a system specifically targeted at the smaller stone segment, enabling a fast, efficient inclusion mapping solution for manufacturers of smaller goods. Sarine is proud to have made our leading Galaxy™ inclusion mapping technology efficient and cost effective for manufacturers focusing on smaller rough diamonds, thus helping to create additional value for their business."

About Sarine Technologies:

Established in 1988, Sarine Technologies Ltd. is a worldwide leader in the development and manufacturing of advanced evaluation, planning, processing, and finishing systems for diamond and gemstone production. Sarine products include diamond Cut, Color and light performance grading tools, the Galaxy™ family of inclusion mapping systems, rough diamond

planning optimisation systems, laser cutting and shaping systems, laser-marking and inscription machines and polished diamond visualisation systems. Sarine systems have become an essential gemology tool in every properly equipped gem lab, diamond appraisal business and manufacturing plant, and are today considered essential items by both diamond dealers and retailers. For more information about Sarine and its products and services, visit <http://www.sarine.com>.
