

RESPONSES TO THE SGX REGCO'S QUERIES

Indofood Agri Resources Ltd. (the "Company") refers to the list of queries received from the Singapore Exchange Regulation ("SGX RegCo") on 15 October 2026 concerning forest and peatland fires in Indonesia and the resulting transboundary haze.

The Company wishes to provide the following clarifications to the SGX RegCo's queries:

- (a) Whether any of the Group's operations, concessions or other assets in Indonesia have been affected by the recent forest and peatland fires. If so, please provide details.**

***Response:** The Company's operations in Indonesia are primarily carried out through its listed subsidiary in Indonesia, PT Salim Ivomas Pratama Tbk. and its subsidiaries ("SIMP Group"). The Company has been in close contact with the management of SIMP since hotspots and fires were first reported in Indonesia. As highlighted in SIMP's announcement dated 15 October 2026: In addition to enforcing its zero-burning policy for land clearing, the SIMP Group continuously monitors and identifies hotspots across the SIMP Group's plantation areas and immediate vicinity, as hotspots that are not addressed promptly could potentially lead to fires. The SIMP Group proactively uses satellite data from the U.S. National Oceanic and Atmospheric Administration ("NOAA") and the U.S. National Aeronautics and Space Administration ("NASA"), which is then cross-checked against SIMP's official concession maps. Through these activities, hotspots were observed to appear randomly and on a small scale within the SIMP Group's plantation areas, allowing them to be addressed immediately to prevent fires.*

- (b) The Group's assessment of whether any of its operations, concessions or activities in Indonesia have contributed, or may have contributed, to the recent haze, and the basis for that assessment.**

***Response:** As mentioned above, SIMP Group monitors and identifies hotspots across the SIMP Group's plantation areas from time to time continuously to address and handle the hotspots immediately to prevent fires so that they may not contribute the haze.*

- (c) Whether the Group has received any enquiries, allegations, notices or requests for information from government authorities, the media or other stakeholders in relation to the recent fires or haze. If so, please provide:**
- (i) details of the matters raised;**
 - (ii) whether the Group has reviewed any allegations, claims or findings contained in the relevant reports and, if so, its views on those allegations, claims or findings and the basis for those views;**
 - (iii) the Group's response to the matters raised; and**
 - (iv) details of any ongoing investigations or follow-up actions.**

***Response:** Until to-date, the Group has not received any other allegations, notices or requests for information from government authorities or the media in relation to the recent forest and land fires or the resulting haze, save for the queries received by SIMP from the Indonesia Stock Exchange in relation to forest and land fires, to which SIMP has responded as set out in SIMP's announcement dated 15 October 2026.*

- (d) The measures currently in place to prevent, monitor and respond to fires within the Group's operations and concessions in Indonesia, including any relevant no-burning policies, hotspot monitoring and firefighting arrangements, where applicable.

Response: As set out in the Company's [2025 Sustainability Report](#) and [Sustainable Agriculture Policy](#), both available on the Company's website, the Group enforces a strict zero-burning policy across all its operations and requires the same of its suppliers. The Group requires mechanised land clearing, particularly for non-productive oil palm areas, and actively shares best practices with local communities.

The Group takes a proactive approach to fire prevention through hotspot monitoring and stakeholder education. The framework for addressing fire risks and associated scenarios is set by the Group's Enterprise Risk Management ("ERM") team. It incorporates the daily monitoring and identification of hotspots using satellite data from NOAA and NASA, which is then cross-referenced against the Group's official concession maps. Estate managers and specialised fire teams verify potential hotspots on the ground and maintain constant communication to enable a rapid response. Since 2022, the Group has improved efficiency by partially automating satellite image monitoring, enabling employees to focus on analysis and investigation. Building on this progress, the Group completed the roll-out of a mobile hotspot mapping system across all estates in 2024 and, in 2025, integrated fire incident reporting into the same application, reducing manual reporting and accelerating response times.

The Group's fire prevention training programme was developed with Indonesia's Ministry of Environment and Forestry, the military, the police and local governments. To ensure readiness, the Group's estates are equipped with firefighting vehicles and equipment, and its fire specialists receive regular training in both fire prevention and emergency response. In 2025, the Group conducted 56 fire control training days across 75 estates and mills.

Educating field workers, smallholders and local communities is also critical to the Group's fire risk management strategy. Without a clear understanding of the risks and consequences for both the environment and plantations, other measures such as the Group's digital notification system would be far less effective. The Group has implemented community collaboration programmes to enhance local capacity and knowledge of fire prevention, engaging a total of 130 local villages.

In March 2025, Indonesian regulations on fire prevention in plantations were tightened, requiring formal fire management plans, dedicated fire brigades and the integration of modern monitoring technologies. The Group has implemented the required measures and, to the best of its knowledge, complies with the updated standards.

In view of the recent haze, the Group remains committed to the safety and well-being of its workers, their families and the communities in which it operates.

- (e) Whether the matters described above have resulted, or are expected to result, in any material operational, financial, legal, regulatory or reputational impact on the Group.

Response: For the matters described in (a) to (c) above, until to-date there has been no material impact on the Group's business activities or business continuity.

BY ORDER OF THE BOARD
