Key Points of Financial Results

【Revenue】

- **Revenue decreased by 446.2 billion yen (down 21.3%) from the same period last year to 1,651.0 billion yen** mainly due to a decrease of income unit price in electrical energy sales.

【Profit】

- **Profit decreased by 152.3 billion yen from the same period last year 291.2 billion yen to 138.9 billion yen.**
 - The effect of time lag decreased.
(-199.2 billion yen [215.9 billion yen to 16.6 billion yen])
 - Profit excluding time lag increased.
(+46.9 billion yen [75.3 billion yen to 122.2 billion yen])
- Profit excluding the time lag increased mainly due to the improvement of impact on mainly fuel procurement price and the impact of fuel inventory unit prices although the profit from overseas power generation and renewable energy business and fuel business decreased.

Change Factors of Consolidated Profit

- Profit excluding the time lag increased mainly due to the improvement of impact on mainly fuel procurement price and the impact of fuel inventory unit prices although the profit from overseas power generation and renewable energy business and fuel business decreased.

(Reference) : JERA's Value Chain and Segment

- JERA owns the entire supply chains for fuel and thermal power generation, from fuel upstream business (development of gas fields) to transportation and storage (fuel terminal operation) to power generation and wholesaling.
- We have three business segments; "Fuel business" for investment in fuel upstream, transportation and trading business, "Overseas power generation and renewable energy business" for investment in overseas power generation and domestic and overseas renewable energy business, and "Domestic thermal power generation and gas business" for sales of electricity and gas in Japan.

FY2024 Forecast

- Profit excluding the time lag is expected to be around 150 billion yen, while time lag profit is projected to be 50 billion yen, with a total profit of around 200 billion yen. (No change from the previous forecast)
- Results may fluctuate due to changing trends in fuel markets and other factors.

Overview of each segment

Fuel Business: Fuel Upstream / Transportation Business

17

- Demand for LNG has increased in Europe and Asia as low-carbon energy. However, JERA participates in LNG upstream projects by leveraging one of the world's largest LNG transaction volume (FY2022: Approximately 35 million tons*) to achieve stable energy supply. JERA secures stable LNG sources by building portfolio which can diversify procurement risk as well as acquire the information related to procurement and the market trend.
- Additionally, JERA owns fuel carriers that contribute to highly consistent, flexible, and competitive fuel supply.
- In June 2022, a fire incident occurs at the Freeport LNG terminal, shutting down operations at the terminal. In March 2023, regulatory approvals for resumption of production were obtained one by one. And production has resumed at all lines.

*1 JERA Group as a whole

Fuel Upstream Project

Project Name	Country	LNG Production / Liquefaction Capability	Investment Ratio
Darwin LNG Project	Australia	Approx. 3.7 million tons/year	6.132%
Gorgon LNG Project		Approx. 15.6 million tons/year	0.417%
Ichthys LNG Project		Approx. 8.9 million tons/year	0.735%
Wheatstone LNG Project*2		Approx. 8.9 million tons/year	Gas field: 10%, LNG plant: 8%
Barossa gas field Project		LNG production and liquefaction capacity is the same scale as Darwin LNG Project.	12.5%
Scarborough Gas Field Project	United States	Approx. 8.0 million tons/year at maximum (Supply will be planned to start in 2026)	15.1%
Freeport LNG Project (Train1)		Approx. 5.15 million tons/year	25%
Freeport LNG Development, L.P.*3,5		Approx. 15.45 million tons/year*4 for all three lines	21.9%

*2 Ratio of capital contribution through PE Wheatstone, in which JERA invests

*3 Freeport LNG Project Management Company *4 Including 5.15 million tons/year from Train 1

* 5 Ratio of capital contribution through Gulf Coast LNG Holdings LLC, in which JERA invests

Fuel Business: Trading Business

18

- In addition to the Singapore headquarters, JERAGM has offices in the United Kingdom, the United States, and Japan, and holds approximately 300 employees who engage in asset-backed trading.
- Utilizing the global trading network, JERAGM supplies LNG and coal to JERA's domestic power generation business. Leveraging this commercial flow, JERAGM has been able to achieve both supply stability and the expansion of profits by efficiently capturing profit opportunities through transactions with markets and third parties.
- JERAGM trades within the limited volume under the governance of the Board of Directors elected by shareholders.

Domestic Thermal Power and Gas Business: Progress of Replacement of Thermal Power Plants in Japan

19

- JERA has been replacing with the latest high-efficiency thermal power generation facilities. Following Taketoyo and Anegasaki New Unit 1, Anegasaki New Unit 2 began commercial operation in April, Yokosuka Unit 1 in June, Anegasaki New Unit 3 in August 2023, and Yokosuka Unit 2 in December 2023.
- Construction and commissioning of Goi Unit 1 to 3 are well underway. Unit 1 began commercial operation in August 2024.
- Unit 1 to 4 of Chita were abolished in FY2021. Unit 5 is planned to be abolished in FY2026 and is being considered for replacement with the latest high-efficiency thermal power generation (environmental impact assessment has been conducted).

*As of September 30, 2024

Development Point	Status of Development
Goi	Full-scale construction started in April 2021. Construction progress: 99%

Domestic Thermal Power and Gas Business: Composition of Power Sources

- 79% of our power source is LNG, which has low CO₂ emissions.
- In coal, ultra super critical power generation system (USC), which emits comparatively small amount of CO₂, accounts for a large proportion. JERA will shut down all inefficient coal power plants by 2030*¹.

Composition of Power Sources*²

Overseas Power Generation and Renewable Energy Business: Portfolio of Overseas Power Generation and Renewable Energy Business

22

- JERA is expanding its businesses through the experience gained from projects around the world. Total capacity of power generation in overseas projects is 13.86 GW (including under construction).
- JERA aims to secure funds and expand earnings by replacing its portfolio through the sale and reinvestment of assets to achieve an optimal asset structure in line with changes in the business.

Progress of JERA Zero CO₂ Emissions 2050

JERA Zero CO₂ Emissions 2050: Roadmap for its Business in Japan

25

- JERA established “JERA Zero CO₂ Emissions 2050 Roadmap for its Business in Japan”, including four initiatives.

*Reduce carbon emission intensity of thermal power plants by 20% based on the long-term energy supply-demand outlook for FY2030 as set by the government

Efforts to Achieve Zero CO2 Emissions in JERA's Value Chain

- JERA is participating in business throughout the value chains, from fuel upstream development, transportation, and storage and to the power generation and electricity sales. JERA is working with many countries and companies around the world to achieve zero emissions at each stage.

Field	Business Partners	Contents	Release Date
Upstream Development /Production	ADNOC (UAE)	Consideration of cooperation in the fields of clean hydrogen and ammonia	2023/7
	PIF (Saudi Arabia)	Consideration of opportunities for the development including green hydrogen production	2023/7
	TAQA (UAE)	Consideration of project development in the area of decarbonization, including green hydrogen and ammonia production	2023/2
	CF Industries (United States)	Joint Development Agreement for Low Carbon Ammonia Project	2024/4
	Yara (Norway)	Consideration of project development for blue ammonia production and sales & purchase of clean ammonia	2023/1
	Chevron (United States)	Consideration of collaboration on multiple lower carbon opportunities in Asia Pacific region (Australia) and the United States	2022/11
	Exxon Mobil (United States)	The Joint Study to Develop Low Carbon Hydrogen and Ammonia Production Project	2024/3

JERA Zero CO2 Emissions 2050:

JERA's decarbonization technologies development timeline

- The demonstration test of ammonia 20% conversion rate (by calorie) concluded in June 2024 in Hekinan power plant Unit 4 and planning to start commercial operation in the 2020s.
- For over 50% conversion rate, demonstration tests using the Green Innovation Fund Program will be conducted by FY 2028. Based on the results, development for 100% ammonia usage will be promoted.
- Demonstration test of hydrogen 30% conversion rate (by volume) using JERA's gas turbine CC unit will be conducted by FY2020s.

Initiatives for Ammonia Conversion

Project	Development of Technologies for Carbon Recycling and Next-Generation Thermal Power Generation / Research, Development, and Demonstration of Technologies for Ammonia Co-Firing Thermal Power Generation *Implemented as a granted project by NEDO	Green Innovation Fund Program / Establishment of Fuel Ammonia Supply Chains project / Demonstration project to develop technology to increase the ammonia co-firing rate at coal-fired boilers
Overview	At Hekinan Thermal Power Station Unit 4 (power output: 1 million kW), JERA started electricity generation of 20% ammonia conversion.  Hekinan Thermal Power Station	- JERA aims to increase the ammonia conversion rate to 50% or more. - JERA will plan to develop a burner capable of 50% or more ammonia conversion, and to start 50% or more ammonia conversion in actual equipment by FY2028. - JERA will plan to develop an ammonia-fired burner suitable for coal boilers and verify that two units of different boiler types can convert to ammonia more than 50% by FY2028.

Initiatives for Hydrogen Conversion

- Started joint development of high-efficiency hydrogen generation technology utilizing waste heat using SOEC* developed by Denso. Joint demonstration tests are scheduled to start in FY 2025 at a thermal power plant in our company.
- * SOEC(Solid Oxide Electrolysis Cell):SOECs operate at high temperatures using a ceramic membrane as an electrolyte to electrolyze water vapor and produce hydrogen.
- Received notice of acceptance of “Technology development project aimed at building a competitive hydrogen supply chain”, JERA is developing a catalyst to extract hydrogen from ammonia and evaluating the catalyst and process from the perspective of a power generation company.

Conclusion of 20% Fuel Ammonia Substitution Demonstration Testing

- The world's first demonstration testing of 20% ammonia substitution at a large-scale commercial coal-fired thermal power plant in Hekinan thermal power station unit 4 concluded in June 2024.
- Results were positive, confirming that the level of nitrogen oxides (NOx) generated was no higher than before fuel ammonia substitution (than when firing coal alone), a 20% reduction in sulfur oxides (SOx), and that generation of N2O was below the threshold for detection.

Schedule for Construction of Demonstration Facility and Demonstration Test

JERA Zero CO2 Emissions 2050: Establishment of JERA Nex

- The UK-based subsidiary specialized in renewable energy, “JERA Green” changed its name to “JERA Nex” to introduce and develop renewable energy business and start its operation in April 2024.
- A range of our renewable energy assets will be collected to JERA Nex, which will construct a platform to develop our renewable energy business swiftly.
- The new target to develop renewable capacity: 20GW in FY2035

Summary	
Name	JERA Nex Limited
CEO	Nathalie Oosterlinck Head of Global Renewables at JERA
Investor	JERA: 100%
Registration date	March 26, 2024
Location	UK, London
Business	Investment and development for a range of renewable energy assets, including offshore and onshore wind, solar and battery storage in the world. Operation of renewable energy assets by taking advantage of O&M.

*1 Assumed average net share of 50%. Analysis based on benchmarking average capacity additions targets and market share of global competitors

Efforts towards Zero CO2 Emission(Renewable Energy Development)

- JERA has set a target of 20GW renewable energy development by FY2035, and is widely promoting wind power, solar power, battery storage, etc.

Renewable Energy Development

*1 Parkwind's equity generation capacity is 0.54GW.

*2 JERA's equity generation capacity is approximately 0.11GW.

JERA Zero CO2 Emissions 2050: Actions for Domestic Offshore Wind Power Generation

- JERA selected as the business operator for an offshore wind power project off Oga city, Katagami city, and Akita city in Akita prefecture on December 13, 2023.

Oga, Katagami, and Akita Offshore Green Energy Consortium

Interconnection Capacity	315MW
Number of Units	21 units
Turbine Model	Vestas V236-15MW
Planned Start of Commercial Operation	June 2028

<Map of Business Areas>

- JERA acquired shares of Green Power Investment Corporation on August 3, 2023. On January 1, 2024, Ishikari Bay New Port Offshore Wind Farm held by JERA and GPI began in its operation.

Ishikari Bay New Port Offshore Wind Farm

Interconnection Capacity	112 MW
Number of Units	14 units
Turbine Model	Siemens Gamesa 8MW
Start of Commercial Operation	1st January 2024

JERA Zero CO2 Emissions 2050: JERA Cross business launch

- JERA has established JERA Cross with the aim of combining its energy, digital, and business transformation capabilities to accelerate corporate “green transformation” (GX) in June.
- Integrated support for companies from designing their future vision and strategy for the GX, to the development and supply of renewable energy and other energy sources needed to decarbonize electricity will be provided for the realization of decarbonized society.
- JERA Cross will also provide a stable supply of “24/7 carbon free electric power” that emits no CO2 twenty-four hours a day, 365 days a year*, contribute to solving client issues, transforming client businesses, and reducing CO2 emissions.

Overview of JERA Cross

Company name	JERA Cross Co., Inc.
Investor	JERA Co., Inc. : 100%
Location	Nihonbashi Takashimaya Mitsui Building 25F, 2-5-1 Nihonbashi, Chuo-ku, Tokyo
Business Description	Provisions of services that support GX projects and solutions for electricity decarbonation
Website	https://www.jera-cross.com/en/

*In accordance with the Ministry of Economy, Trade and Industry's "Guidelines for Retail Sales of Electricity," this means providing 100% of the electricity supply from CO2 zero-emission sources, including the environmental value derived from the use of non-fossil certificates. This does not mean that no CO2 is emitted during the entire life cycle of the fuel, including its production, transportation, etc.
