## **Press Release**

### **MIT LAUNCHES NEW VISION INSPECTION EQUIPMENT UNDER ITS SMART FLEX SERIES AT SEMICON TAIWAN 2014 SHOW**

### **IT SECURES NEW ORDERS WORTH \$8.2m, LEADING TO TOTAL ORDER BOOK OF \$34.2m**

Singapore, 3 September 2014 - The Board of Directors of Manufacturing Integration Technology Ltd ("MIT" or "Company") is pleased to announce that the Company has launched a new generation of vision inspection equipment under its Smart Flex series at the Semicon Taiwan 2014 Show in Taipei today.

Pre-marketing of this new series of equipment had been on-going and market reception has been encouraging. In this respect, we are pleased to announce that we have received an initial order for 11 new Smart Flex machines from an existing customer. Together with other die sorter and laser marker sales, the Company has secured a total of \$8.2m new orders since our last disclosure in the Company's Half-year results announcement on 6 Aug 2014.

With these latest wins, the Company's total order book as at 1 Sept 2014 stands at \$34.2m, reflecting a recovering market from 2013 when the Company recorded total full-year sales of \$31m. The Company had also earlier announced sales of \$22m for 1H FY 2014.

The Company's participation at this year's Semicon Taiwan Show reflects our aggressive push to widen the customer base for our range of die sorting, inspection and marking products. Having bagged a strong order backlog for 2H2014, we are now beefing up our sales and marketing channels and developing new customer leads for 2015.

These orders are expected to contribute positively to MIT's financial results for the financial year ending 31 December 2014. None of the Directors or controlling shareholders has any direct or indirect interest in the sales contracts.

### **About Manufacturing Integration Technology Ltd ("MIT")**

Incorporated in 1992 and listed on the Singapore Exchange's Mainboard since 1999, MIT is a leading provider of integrated automation solutions to the semiconductor industry worldwide. Its range of high-end equipment include wafer level die marking, sorting and inspection systems. It has also entered into the renewable energy market by producing its proprietary range of solar panel manufacturing equipment for the PV market. The Group has furthermore diversified its business to provide contract equipment manufacturing and precision engineering services to the broader markets with a manufacturing footprint in Shanghai, China.
