PRESS RELEASE

H2G establishes wholly-owned subsidiary to enter international clean energy supply and trading

New business to extend H2G's Energy Business from production and distribution in Singapore to international trading

SINGAPORE, 29 August 2025 – H2G Green Limited (SGX:5AI) ("**H2G**" or the "**Company**", together with its subsidiaries, collectively the "**Group**"), one of the leading sustainable energy solutions providers, is pleased to announce that it has incorporated a wholly-owned subsidiary, H2G Clean Energy Pte Ltd ("**H2G Clean Energy**"), on 28 August 2025. H2G Clean Energy will be principally engaged in the supply and trading of liquefied natural gas ("**LNG**"), hydrogen-related products and other clean energy products to users such as power plants across the region, leveraging on the commercial networks of H2G.

According to Shell's LNG Outlook 2025, global demand for LNG is forecasted to rise by around 60% by 2040, largely driven by economic growth in Asia, emissions reductions in heavy industry and transport as well as the impact of artificial intelligence.¹ H2G Clean Energy will be the Group's dedicated unit to tap international trading and supply opportunities arising from such growing demand. As a start, H2G Clean Energy will target markets that are underserved by the energy majors, addressing supply chain gaps to improve access to LNG in developing countries.

H2G's 52.03%-owned subsidiary Gashubunited Utility Private Limited ("**GasHub**") had earlier in July 2025 entered into two non-binding memoranda of understanding to undertake two LNG projects in the Philippines, including the conversion and upgrading of a diesel-fueled 24 Megawatts ("**MW**") power barge to a natural gas-fueled power barge with an

¹ Shell plc, "Asian economic growth expected to drive 60% rise in LNG demand to 2040" (25 February 2025). <https://www.shell.com/news-and-insights/newsroom/news-and-media-releases/2025/lng-demand-expected-rise-by-sixty-percent-by-2040.html>

increased capacity of 32MW and the provision of an LNG floating storage unit and an onshore facility for the purpose of regasification and cold energy recovery for a 300MW LNG power plant. As the Group's regional business expands, the establishment of H2G Clean Energy will improve managerial resource allocation across the Group's different units within the Energy Business and strengthen the ability to capitalise on downstream energy trading and supply opportunities.

The Group's biomass-to-green hydrogen business, carried out by its 50.10%-owned subsidiary Green Energy Investment Holding Private Limited ("**GEIH**"), remains on track towards full commercialisation of its production facility in Singapore to repurpose and transform waste biomass into green hydrogen, as well as biochar and other high-value, sustainable materials, and to commence generating revenue from the sale of these sustainable products. Other than green hydrogen, GEIH is also studying potential further downstream derivatives such as green methanol and sustainable aviation fuel. H2G Clean Energy will also market GEIH's clean energy products in the future, thus expanding market access for GEIH as well as opening new trading opportunities for the Group.

Mr. Pek Hak Bin, CEO of H2G, remarked: "The establishment of H2G Clean Energy demonstrates our strategy to grow and integrate the Energy Business across multiple domains, not just in technology development, engineering and LNG last-mile distribution, but also in energy trading and supply, to extract synergies and improve operational excellence across the Group."

About H2G Green Limited

H2G focuses on delivering sustainable energy solutions through its two subsidiaries: GasHub for LNG and GEIH for hydrogen, biochar, and other high-value, sustainable materials. In Singapore, the Company is working towards solving the energy trilemma — advancing cost competitiveness of sustainable energies, expanding energy security, and transitioning to net zero. Beyond Singapore, the Company is powering Southeast Asia's transition towards cleaner, sustainable energy solutions. H2G stands out for deep engineering, energy, and sustainability expertise and an unwavering commitment to safety.
