Gold Supply and Demand

Finding gold is becoming more difficult and mine production is expected to plateau. Meanwhile, sources of demand for gold are mixed with jewelry demand slowing and investment demand setting new records in the first half (H1) of 2016. Despite a slowdown in consumer demand, investment demand is at record highs with Central Banks being net purchasers of gold six years in a row.

ONLY 1

NEW GOLD FIND

New discoveries of gold peaked in 1983 at 12 and dipped in 2009 to their lowest level since 1977 at just 1 find.

1%

MINE PRODUCTION GROWTH

There has been a flattening out of growth in mine production. Output rose just 1% in 2015 to 3,211.4 tonnes but Q4 2015's production of 846.4 tonnes marked the first quarterly decline since 2008.

1,064

DECREASED DEMAND IN INDIA & CHINA

Jewelry demand has struggled with a surge in the gold price and economic slowdowns in these countries.

RECORD INVESTMENT DEMAND

Investment in gold bars, coins and ETFs was the largest component of gold demand for two consecutive quarters (Q1 and Q2 2016) – the first time on record this has ever happened. Demand of 1,064 tonnes, as a result of market uncertainty, negative interest rates, and pent up demand, was 16% higher than the previous H1 high from 2009, which was in the midst of the financial crisis.

What does this mean for investors?

Supply and demand dynamics reveal the complexity involved in decisions to produce and invest in gold. It also highlights the variables that influences gold's price that have made it have historically low correlations to other asset classes.¹ Pro-cyclical consumption and counter-cyclical investment are driven by different market forces but interact to contribute to overall gold demand.

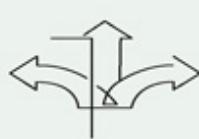

RETHINK VOLATILITY

Investors should consider volatility strategies that have the potential to limit downside but allow them to potentially participate in upside.

PLAY BOTH SIDES

Consider an investment, such as gold, with demand drivers in pro-cyclical and counter-cyclical business cycles.

DIVERSIFY

Adding a strategic allocation to gold within a portfolio can potentially improve diversification and risk-adjusted returns given its historical low correlation to traditional asset classes and other commodities.²

^{1,2} The correlation coefficient measures the strength and direction of a linear relationship between two variables. It measures the degree to which the deviations of one variable from its mean are related to those of a different variable from its respective mean. Gold's correlation to the S&P 500 Index, the Barclays US Aggregate Index and Bloomberg Commodity Index is -0.01, 0.19 and 0.44, respectively. Diversification does not ensure a profit or guarantee against loss. Source: Bloomberg and SSGA, as of 12/31/2015. Over the 10-year period ending 6/30/2016 gold's correlation with the S&P 500[®] has been 0.038 with 0 being uncorrelated and 1 being perfectly correlated (Sources: StyleADVISOR, SSGA).

More About GLD[®]

Gold ETFs can provide investors with the potential benefits of owning gold without the added costs and logistics of physical ownership. SPDR Gold Shares (GLD[®]) seeks to offer investors an innovative, relatively cost efficient and secure way to access the gold market.

THE LARGEST PHYSICALLY BACKED GOLD ETF

GLD had \$40.3B in assets under management while the second largest gold ETF had \$9.6B.

Important Risk Information

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs' net asset value. Brokerage commissions and ETF expenses will reduce returns.

Commodities and commodity-index linked securities may be affected by changes in overall market movements, changes in interest rates, and other factors such as weather, disease, embargoes, or political and regulatory developments, as well as trading activity of speculators and arbitrageurs in the underlying commodities.

Frequent trading of ETFs could significantly increase commissions and other costs such that they may offset any savings from low fees or costs.

Diversification does not ensure a profit or guarantee against loss.

The information provided does not constitute investment advice and it should not be relied upon as such. It should only be considered a solicitation to buy or sell, or offer to sell or buy, securities. It does not take into account any investor's particular investment objectives, strategies, tax status or investment horizon. You should consult your tax and financial advisor. All material has been obtained from sources believed to be reliable. There can be no assurance that the active trading market for GLD shares will be maintained.

The funds presented herein have different investment objectives, costs and expenses. Each fund is managed by a different investment firm, and the performance of each fund will necessarily depend on the ability of that fund to manage its assets to select portfolio investments. These differences, among others, may result in significant disparity in the funds' portfolio assets and performance. For further information on the funds, please review their respective prospectuses.

Investing in commodities entails significant risk and is not appropriate for all investors.

Important Information Relating to SPDR Gold Trust ("GLD[®]):

The SPDR Gold Trust ("GLD") has filed a registration statement (including a prospectus) with the Securities and Exchange Commission ("SEC") for the offering to which this communication relates. Before you invest, you should read the prospectus in that registration statement and other documents GLD has filed with the SEC for more complete

information about GLD and this offering. You may get these documents for free by visiting EDGAR on the SEC website at sec.gov or by visiting spdrgoldshares.com. Alternatively, the SPDR Gold Trust will arrange to send you the prospectus if you request it by calling 866.320.4059.

GLD is not an investment company registered under the Investment Company Act of 1940 ("1940 Act"). GLD is not subject to regulation under the Commodity Exchange Act of 1936 ("the CEA"). As a result, shareholders of the Trust do not have the protections associated with ownership of shares in an investment company registered under the 1940 Act or the protections afforded by the CEA.

GLD shares trade like stocks, are subject to investment risk and will fluctuate in value. The value of GLD shares relates directly to the value of the gold held by GLD (less its expenses), and fluctuations in the price of gold could materially and adversely affect an investment in the shares. The price received upon the sale of the shares, which trade at market price, may be more or less than the value of the gold represented by them. GLD does not generate any income, and as GLD regularly sells gold to pay for its ongoing expenses, the amount of gold represented by each share will decline over time. Investors involved with GLD should keep in mind that GLD is not a bank. See the GLD prospectus for a detailed discussion of the risks of investing in GLD shares. The GLD prospectus is available [here](#).
