SINGAPORE, 3 November 2026 – AI Nova Pte. Ltd. ("**AI Nova**") and HyperEdge Global Pte. Ltd. ("**HyperEdge**"), two wholly-owned subsidiaries of NutryFarm International Limited ("**NutryFarm**" or the "**Company**", and together with its subsidiaries, the "**Group**"), took centrestage at Digital Nex Asia 2026 ("**D:NEXA 2026**"), as the main sponsor and partner of the AI-focused event.

D:NEXA 2026 brought together technology companies, investors, entrepreneurs and industry partners. The programme centred on the trusted digital economy, AI infrastructure and real-world applications, and human-centred AI transformation. The conference drew approximately 1,000 registered participants. About half held director-level or more senior positions, around 28% were

CEOs, founders or board-level executives, and approximately 30% were technology and AI practitioners. The Guest of Honour was Chairman of the National Research Foundation and Singapore's former Deputy Prime Minister, Mr Heng Swee Keat.

Powering a strategic pivot

AI Nova and HyperEdge are central to NutryFarm's transformation from a nutrition and health food company into a provider of AI computing and data centre infrastructure. Together, the two businesses give the Group a presence at both the computing and infrastructure ends of the AI value chain, in a region where, data centre investment is projected to more than double from US$15.72 billion in 2025 to US$35.08 billion by 2031.[1] NutryFarm intends to build on these platforms as it continues to reposition the Group for growth.

AI Nova is NutryFarm's platform for high-performance computing and cloud-based services. Its business covers the supply of cloud, maintenance and support services, and it is positioned around the AI computing resources and enterprise infrastructure that organisations need to move AI from pilot projects to production.

Since its inception in 2024, AI Nova's business has gained traction and in October 2026, NutryFarm announced that a customer of AI Nova had extended its services agreement from 36 months to 60 months until November 2030.[2] In connection with the extension, AI Nova received a payment of approximately US$65.2 million for this service agreement.

HyperEdge develops prefabricated and modular data centre solutions in which functional units are integrated at the factory before being delivered to site for installation and connection. Modules can be added progressively to match customers' computing requirements. HyperEdge's solutions enable customers to speed up on-site deployment.

AI Nova's computing and cloud services and HyperEdge's modular infrastructure address two ends of the same customer need – the capacity to host AI workloads and the computing power to run them. Looking ahead, the Group is exploring how the two can work together to offer customers an integrated proposition, with GPU resources from AI Nova and infrastructure solutions and computing configuration from HyperEdge.
