dengan suatu definisi jenis nilai melalui konversi pendapatan menjadi estimasi nilai. Proses ini dapat menggunakan metode kapitalisasi langsung atau metode arus kas terdiskonto, atau keduanya.

**3. Pendekatan Biaya**

Pendekatan ini menetapkan nilai properti dengan mengestimasi biaya perolehan tanah dan biaya pengganti pengembangan baru (sesuatu yang dibangun) di atasnya dengan utilitas yang sebanding atau mengadaptasi properti lama dengan penggunaan yang sama, tanpa mempertimbangkan antara lain biaya akibat penundaan waktu pengembangan dan biaya lembur. Untuk properti yang lebih tua, pendekatan biaya memperhitungkan estimasi depresiasi termasuk penyusutan fisik dan keusangan lainnya (fungsional dan eksternal). Biaya konstruksi dan depresiasi seharusnya ditentukan oleh hasil analisis dari perkiraan biaya konstruksi dan depresiasi sesuai dengan kelaziman yang ada di pasar atau dalam praktek penilaian.

Tidak terdapat properti investasi yang digolongkan ke dalam nilai wajar level 1 dan level 3.

Nilai wajar properti investasi diklasifikasikan sebagai level 2 dalam hirarki nilai wajar.

Nilai wajar level 2 dari tanah dihitung dengan menggunakan pendekatan pasar dan pendekatan pendapatan. Input yang diperoleh dari pendekatan pasar yaitu:

- a. Harga jual atau harga sewa per meter persegi
- b. Tingkat hunian
- c. Tingkat pertumbuhan
- d. Tingkat diskonto dan kapitalisasi.

Penyesuaian dilakukan berdasarkan ukuran, lokasi, bentuk dan spesifikasi, hak atas tanah dan elemen perbandingan lainnya.

*the estimated value. This process uses the direct capitalization method or the discounted cash flow method or both.*

**3. Cost Approach**

*This approach establishes the value of the properties by estimating the acquisition of land and the cost of replacing the new development (something built) on it with comparable utility or adapting the old property with the same usage, without considering the costs due to development delays and overtime costs. For an older property, the cost approach includes depreciation estimation including physical depreciation and other obsolescence (functional and external). Construction cost and depreciation should be determined from analysis of the construction cost and estimation of depreciation according to the prevalence in the market or in valuation practice.*

*There were no investment properties which could be classified as the level 1 and level 3 fair value.*

*The fair values of investment properties are within level 2 of the fair value hierarchy.*

*The level 2 fair value of land is calculated using the market approach and income approach. Data inputs were obtained from the market approach that consists of:*

- a. sale or rental price per square meter*
- b. Occupancy rate*
- c. Growth rate*
- d. Discount and capitalization rate.*

*Adjustments were made based on size, location, shapes and specifications, land rights and other comparison elements.*

*Testing dan masa uji coba (commissioning test)* merupakan serangkaian kegiatan pemeriksaan dan pengujian instalasi listrik yang telah selesai dikerjakan dan hendak dioperasikan. Beban dan pendapatan atas penjualan tenaga listrik yang terjadi pada masa uji coba dikapitalisasi ke Pekerjaan Dalam Pelaksanaan konstruksi dikarenakan instalasi listrik belum beroperasi.

*Testing and commissioning (commissioning test)* are series of inspection and testing activities for electrical installations that have been completed and are going to be operated. The costs and revenues from the sale of electricity that occurred during the commissioning test are capitalized into Construction in Progress because the electrical installation not been commercially operated.

BPP tenaga listrik dihitung berdasarkan formula, termasuk tingkat susut jaringan transmisi dan distribusi, yang ditetapkan oleh ESDM c.q Direktorat Jenderal Ketenagalistrikan.

Berdasarkan Surat Pengesahan Daftar Isian Pelaksanaan Anggaran ("DIPA") revisi tanggal 31 Desember 2018 No.SP.DIPA-999.07.1.979321/2019 dan tanggal 29 Desember 2017 No.SP.DIPA-999.07.1.979321/2018, pagu tertinggi subsidi listrik tahun anggaran 2019 dan 2018 ditetapkan masing-masing sebesar Rp59.323.456 dan Rp52.960.000. **38. Government's Electricity Subsidy**

Subsidy revenue represent the revenue from the Government of Indonesia for difference between allowable cost plus 7% margin with actual sales price for each tariff group except for tariff group which received automatic tariff adjustment based on the Minister of ESDM Regulation No. 09 Year 2015 regarding changes on the Minister of ESDM Regulation No. 31 Year 2014 regarding electricity tariff provided by PT PLN (Persero).

The electricity subsidy is calculated from the negative difference between the average sales prices (Rp/kWh) of each tariff group less the cost of electricity supplies (Rp/kWh) on the voltage at each tariff group multiplied by the electricity sales volume (kWh) for each tariff group. The cost of electricity supplies is computed based on the formula, including the rate of transmission and distribution losses which is determined by the Directorate General of Electricity under the Ministry of ESDM.

Based on the Approval Letter of Budget Performance List ("DIPA") revised dated December 31, 2018 No.SP.DIPA-999.07.1.979321/2019 and dated December 29, 2017 No.SP.DIPA-999.07.1.979321/2018, the electricity subsidy plafond for budget year 2019 and 2018 amounted to Rp59,323,456 and Rp52,960,000 respectively. Volatilitas aset

Liabilitas program dihitung menggunakan tingkat diskonto yang merujuk kepada tingkat imbal hasil surat utang negara. Jika imbal hasil aset program lebih rendah, maka akan menghasilkan defisit program.

Asset volatility

The plan liabilities are calculated using a discount rate set with reference to government bond yields. If the yield of plan assets is lower, it will generate a deficit program.

Harapan umur hidup

Sebagian besar dari liabilitas program menyediakan manfaat seumur hidup, sehingga kenaikan harapan umur hidup akan mengakibatkan kenaikan liabilitas program.

Life expectancy

The majority of the plans' obligations are to provide lifetime benefit, so that the increase in life expectancy will result in an increase in the plans' liabilities.

Investasi didiversifikasi dengan baik, sehingga kinerja buruk satu investasi tidak akan memberikan dampak material bagi seluruh kelompok aset. Proporsi terbesar aset investasi ditempatkan pada instrumen utang, meskipun Perusahaan dan entitas anak juga berinvestasi pada properti, obligasi, reksadana dan kas. Perusahaan dan entitas anak meyakini bahwa instrumen ekuitas memberikan imbal hasil yang paling baik dalam jangka panjang pada tingkatan risiko yang dapat diterima.

Investments are well-diversified, such that the failure of any single investment would not have a material impact for the entire class of assets. The largest proportion of assets is invested in debt instruments, although the Company and its subsidiaries also invest in property, bonds, mutual funds and cash. The Company and its subsidiaries believe that equities offer the best returns over the long term with an acceptable level of risk.

**b. Perjanjian Jual Beli Tenaga Listrik dan  
Kontrak Penjualan Energi**

Sebelum tahun 1997, Perusahaan mengadakan PPA dan ESC dengan IPP skala besar. Pada tahun 1999, Perusahaan telah melaksanakan renegotiasi terhadap PPA dan ESC melalui Kelompok Kerja Renegosiasi Kontrak Khusus PT PLN (Persero) dibawah arahan Pemerintah. Renegosiasi tersebut meliputi antara lain keseimbangan kondisi kontrak, kewajiban harga dan disparitas harga jual listrik IPP dan harga jual Perusahaan.

Dalam perjanjian dengan IPP tertentu, disepakati bahwa setiap saat selama perjanjian berlaku, Perusahaan dapat melaksanakan opsi untuk membeli hak penjual, milik, dan kepentingan atas proyek yang bersangkutan.

Pada tanggal 31 Maret 2019, perjanjian signifikan antara Perusahaan dan entitas anak dengan IPP adalah sebagai berikut:

**i. Sudah Beroperasi**

**b. Power Purchase Agreements and  
Energy Sales Contract**

In 1999, the Company entered into renegotiation of the PPA and ESC through a Working Group of PT PLN (Persero) Special Contract Renegotiation under the direction of the Government. Such renegotiation includes, among other subjects, equalization in contract conditions, reasonableness of price and disparity of selling price between the IPP and the Company.

Based on the agreements with certain IPPs, the Company may exercise its option to purchase all of the IPP's rights, title and interest in the projects at any time during the contract period.

As of March 31, 2019 the significant agreements between the Company and its subsidiaries with IPPs are as follows:

**Sensitivitas tingkat suku bunga**

Analisis sensitivitas berikut telah ditentukan berdasarkan eksposur Perusahaan dan entitas anak terhadap tingkat suku bunga untuk saldo instrumen keuangan terutang setelah pajak pada tanggal pelaporan. Analisis ini disusun dengan mengasumsikan jumlah saldo aset dan liabilitas terutang pada akhir periode pelaporan, terutang sepanjang tahun. Analisis sensitivitas ini menggunakan asumsi kenaikan dan penurunan sebesar 50 basis poin ("bp") pada tingkat bunga yang relevan dengan variabel lain dianggap konstan. Kenaikan dan penurunan sebesar 50 bp merupakan penilaian manajemen atas kemungkinan perubahan yang rasional terhadap tingkat bunga setelah mempertimbangkan kondisi ekonomi saat ini.

**Interest rate sensitivity**

The sensitivity analysis below has been determined based on the Company and its subsidiaries' exposure to interest rates for financial instruments after tax outstanding at the reporting date. The analysis is prepared assuming the amount of assets and liabilities outstanding at the end of the reporting period was outstanding for the whole year. The sensitivity analysis uses an assumption of a 50 basis point ("bp") increase and decrease in the relevant interest rates with all other variables held constant. A 50 bp increase or decrease represents management's assessment of the reasonably possible change in interest rates after considering the current economic conditions.

medium and long-term funding and liquidity management requirements. The Company and its subsidiaries manage liquidity risk by maintaining adequate cash, reserves, banking facilities and reserve borrowing facilities by continuously monitoring forecast and actual cash flows and matching the maturity profiles of financial liabilities.

In addition, the Company and its subsidiaries maintain an adequate amount of cash and cash equivalents and short-time investments, which may be readily converted to cash upon any unforeseen interruption of their cash collections.

The following table details the remaining contractual maturity for its financial liabilities with an agreed repayment period as of March 31, 2019. The table has been drawn up based on the undiscounted cash flow of financial liabilities based on the earliest date on which the Company and its subsidiaries are required to pay. To the extent that interest flows are floating rate, the undiscounted cash flow is derived from interest rate curves at the end of the reporting period. For foreign currency denominated financial liabilities, the undiscounted amortization is translated using the relevant forward exchange curve at the end of the reporting period.

**d. Nilai wajar instrumen keuangan**

Kecuali dijabarkan pada tabel berikut ini, manajemen berpendapat bahwa nilai tercatat aset dan liabilitas keuangan yang dicatat sebesar biaya perolehan diamortisasi dalam laporan keuangan konsolidasian mendekati nilai wajarnya baik yang jatuh tempo dalam jangka pendek, instrumen tersebut dijamin penuh atau mempunyai tingkat suku bunga pasar:

**d. Fair value of financial instruments**

Except as detailed in the following table, the management considers that the carrying amounts of financial assets and financial liabilities recorded at amortized cost in the consolidated financial statements approximate their fair values either because of their short-term maturities, because the instruments are fully collateralized or because they carry a market interest rate:

Keuangan No.6/POJK.04/2017 tentang  
Perlakuan Akuntansi atas Transaksi  
Berdasarkan Perjanjian Jual Beli Tenaga  
Listrik ("POJK No.6")**

Perusahaan dan entitas anak mengadakan perjanjian jual beli tenaga listrik, yakni Perjanjian Jual Beli Tenaga Listrik ("PPA") dan Kontrak Penjualan Energi ("ESC"), dengan penyedia dan Pengembang Tenaga Listrik Swasta ("IPP"). IPP tersebut merupakan pemegang Izin Usaha Ketenagalistrikan untuk kepentingan umum, yang dapat diserahkan kepada entitas usaha lain dengan tanggung jawab untuk menghasilkan tenaga listrik guna kepentingan umum.

Sebelum 1 Januari 2016, Perusahaan dan entitas anak menerapkan ISAK 8: Penentuan Apakah Suatu Perjanjian Mengandung Suatu Sewa ("ISAK 8") dalam mengevaluasi apakah PPA dan ESC dengan IPP mengandung unsur sewa (Catatan 3.I).

Pada tanggal 1 Maret 2017, Otoritas Jasa Keuangan ("OJK") menerbitkan POJK No.6 yang berlaku bagi Emiten dan Perusahaan Publik. Berdasarkan POJK No.6, transaksi berdasarkan perjanjian jual beli tenaga listrik diperlakukan sebagai transaksi jual beli, meskipun perjanjian jual beli tenaga listrik tersebut mengandung substansi selain jual beli. POJK No.6 berlaku secara prospektif untuk periode tahun buku yang dimulai sejak 1 Januari 2017 dan mengijinkan perlakuan lebih awal sejak 1 Januari 2016. POJK No.6 berlaku sampai akhir periode tahun buku berakhirnya penugasan untuk percepatan pembangunan infrastruktur ketenagalistrikan berdasarkan Peraturan Presiden.

Perusahaan memutuskan untuk menerapkan lebih awal POJK No.6 secara prospektif sejak 1 Januari 2016. Oleh karena itu transaksi berdasarkan perjanjian jual beli tenaga listrik yang mengandung sewa (Catatan 3.I), mulai 1 Januari 2016 disajikan

**a. Implementation of Financial Services  
Authority Regulation No.6/POJK.04/2017  
regarding Accounting Treatment for  
Transactions Based on Power Purchase

Based on POJK No.6, transactions based on a power purchase agreement are treated as sale and purchase transactions, even though the power purchase agreements contain substances other than of a sale and purchase. POJK No.6 applies prospectively for the year beginning on January 1, 2017 and early implementation is allowed for the year beginning on January 1, 2016. POJK No.6 is valid until the end of the assignment on acceleration of electricity infrastructures development in accordance with Presidential Regulation.

The Company decided to early implement POJK No.6 prospectively beginning on January 1, 2016. Therefore, the electricity sale and purchase transactions based on power purchase agreement which contains a lease (Note 3.I), since January 1, 2016 are presented as purchased electricity in

**d. Kombinasi Bisnis**

Kombinasi bisnis adalah suatu transaksi atau peristiwa lain dimana pihak pengakuisisi memperoleh pengendalian atas satu atau lebih bisnis. Kombinasi bisnis dicatat dengan menggunakan metode akuisisi. Imbalan yang dialihkan dalam suatu kombinasi bisnis diukur pada nilai wajar, yang dihitung sebagai hasil penjumlahan dari nilai wajar tanggal akuisisi atas seluruh aset yang dialihkan oleh Perusahaan dan entitas anak, liabilitas yang diakui oleh Perusahaan dan entitas anak kepada pemilik sebelumnya dari pihak yang diakuisisi dan kepentingan ekuitas yang diterbitkan oleh Perusahaan dan entitas anak dalam pertukaran pengendalian dari pihak yang diakuisisi. Biaya-biaya terkait akuisisi diakui di dalam laba rugi pada saat terjadinya.

Pada tanggal akuisisi, aset teridentifikasi yang diperoleh dan liabilitas yang diambil alih diakui pada nilai wajar kecuali untuk aset dan liabilitas tertentu yang diukur sesuai dengan standar yang relevan.

Kepentingan non-pengendali yang menyajikan bagian kepemilikan dan memberikan mereka hak atas bagian proposional dari aset neto entitas dalam hal terjadi likuidasi pada awalnya diukur baik pada nilai wajar ataupun pada bagian proporsional kepemilikan kepentingan non-pengendali atas aset neto teridentifikasi dari pihak yang diakuisisi. Pilihan dasar pengukuran dilakukan atas

- (e) Reclassifies to profit or loss, or directly transfer to retained earnings if required by other Financial Accounting Standards, the amounts recognized in other comprehensive income in relation to the former subsidiary;
- (f) Recognizes any resulting difference as a gain or loss attributable to the owners of the parent.

**d. Business Combinations**

Business combination is a transaction or other events in which an acquirer obtains control of one or more businesses. Business combination is accounted for using the acquisition method. The consideration transferred in a business combination is measured at fair value, which is calculated as the sum of the acquisition-date fair values of the assets transferred by the Company and its subsidiaries, liabilities incurred by the Company and its subsidiaries to the former owners of the acquiree and the equity interests issued by the Company and its subsidiaries in exchange for control of the acquiree. Acquisition-related costs are recognized in profit or loss as incurred.

At the acquisition date, the identifiable assets acquired and the liabilities assumed are recognized at their fair value except for certain assets and liabilities that are measured in accordance with the relevant standards.

Non-controlling interests that are present ownership interests and entitles their holders to a proportionate share of the entity's net assets in the event of liquidation may be initially measured either at fair value or at the non-controlling interests' proportionate share of the acquiree's identifiable net assets. The choice of measurement basis is made on a transaction-by-transaction basis. Other

dasar transaksi. Kepentingan non-pengendali jenis lain diukur pada nilai wajar atau, jika berlaku, pada dasar pengukuran lain yang ditentukan oleh standar akuntansi lain.

Bila imbalan yang dialihkan oleh Perusahaan dan entitas anak dalam suatu kombinasi bisnis termasuk aset atau liabilitas yang berasal dari pengaturan imbalan kontingen (*contingent consideration arrangement*), imbalan kontingen tersebut diukur pada nilai wajar pada tanggal akuisisi dan termasuk sebagai bagian dari imbalan yang dialihkan dalam suatu kombinasi bisnis. Perubahan dalam nilai wajar atas imbalan kontingen yang memenuhi syarat sebagai penyesuaian periode pengukuran disesuaikan secara retrospektif, dengan penyesuaian terkait terhadap *goodwill*. Penyesuaian periode pengukuran adalah penyesuaian yang berasal dari informasi tambahan yang diperoleh selama periode pengukuran (yang tidak melebihi satu tahun sejak tanggal akuisisi) tentang fakta-fakta dan kondisi yang ada pada tanggal akuisisi.

Perubahan selanjutnya dalam nilai wajar atas imbalan kontingen yang tidak memenuhi syarat sebagai penyesuaian periode pengukuran tergantung pada bagaimana imbalan kontingen tersebut diklasifikasikan. Imbalan kontingen yang diklasifikasikan sebagai ekuitas tidak diukur kembali pada tanggal sesudah tanggal pelaporan dan penyelesaian selanjutnya dicatat dalam ekuitas. Imbalan kontingen yang diklasifikasikan sebagai aset atau liabilitas diukur kembali setelah tanggal pelaporan sesuai dengan standar akuntansi yang relevan, dengan diakui keuntungan atau kerugian terkait dalam laba rugi atau dalam pendapatan komprehensif lain.

Bila suatu kombinasi bisnis dilakukan secara bertahap, kepemilikan terdahulu Perusahaan dan entitas anak atas pihak terakuisisi diukur kembali ke nilai wajar pada tanggal akuisisi dan keuntungan atau kerugiannya, jika ada, diakui di dalam laba rugi. Jumlah yang berasal dari kepemilikan sebelum tanggal akuisisi yang sebelumnya telah diakui dalam pendapatan

*types of non-controlling interests are measured at fair value or, when applicable, on the basis specified in another accounting standard.*

*When the consideration transferred by the Company and its subsidiaries in a business combination includes assets or liabilities resulting from a contingent consideration arrangement, the contingent consideration is measured at its acquisition-date fair value and included as part of the consideration transferred in a business combination. Changes in the fair value of the contingent consideration that qualify as measurement period adjustments are adjusted retrospectively, with corresponding adjustments against goodwill. Measurement period adjustments are adjustments that arise from additional information obtained during the measurement period (which cannot exceed one year from the acquisition date) about facts and circumstances that existed at the acquisition date.*

*The subsequent accounting for changes in the fair value of the contingent consideration that do not qualify as measurement period adjustments depends on how the contingent consideration is classified. A contingent consideration that is classified as equity is not remeasured at subsequent reporting dates and its subsequent settlement is accounted for within equity. A contingent consideration that is classified as an asset or liability is remeasured subsequent to the reporting dates in accordance with the relevant accounting standards, as appropriate, with the corresponding gain or loss being recognized in profit or loss or in other comprehensive income.*

*When a business combination is achieved in stages, the Company and its subsidiaries' previously held equity interest in the acquiree is remeasured to fair value at the acquisition date and the resulting gain or loss, if any, is recognized in profit or loss. Pembukuan Perusahaan dan entitas anak, kecuali Majapahit Holding B.V. ("MH") dan Majapahit Finance B.V. ("MF") diselenggarakan dalam mata uang Rupiah, mata uang dari lingkungan ekonomi utama dimana entitas beroperasi (mata uang fungsionalnya). Transaksi-transaksi selama periode berjalan dalam mata uang asing dicatat dengan kurs yang berlaku pada saat terjadinya transaksi. Pada tanggal pelaporan, aset dan kewajiban moneter dalam mata uang asing disesuaikan untuk mencerminkan kurs yang berlaku pada tanggal tersebut. Keuntungan atau kerugian kurs yang timbul dikreditkan atau dibebankan dalam laporan laba rugi komprehensif, kecuali selisih kurs mata uang asing yang dikapitalisasi sebagai biaya pinjaman.

**e. Foreign Currency Transactions and Translation**

*The accounts of the Company and its subsidiaries, except for Majapahit Holding B.V. ("MH") and Majapahit Finance B.V. ("MF"), are maintained in Indonesian Rupiah, the currency of the primary economic environment in which the entity operates (its functional currency). Transactions during the period involving foreign currencies are recorded at the rates of exchange prevailing at the time the transactions are made. At the reporting date, monetary assets and liabilities denominated in foreign currencies are adjusted to reflect the rates of exchange prevailing at that date. The resulting gains or losses are credited or charged to profit or loss, except those foreign exchange differences which are capitalized as borrowing costs.*

Kegiatan usaha MH dan MF merupakan bagian integral dari kegiatan usaha Perusahaan, dengan demikian pembukuan MH dan MF yang diselenggarakan dalam mata uang asing dijabarkan dalam mata uang Rupiah dengan menggunakan kebijakan akuntansi yang sama dengan Perusahaan.

**g. Aset Keuangan**

**Pengakuan dan Pengukuran Awal**

Seluruh aset keuangan diakui dan dihentikan pengakuannya pada tanggal diperdagangkan dimana pembelian dan penjualan aset keuangan berdasarkan kontrak yang mensyaratkan penyerahan aset keuangan dalam kurun waktu yang ditetapkan oleh kebiasaan pasar yang berlaku dan awalnya diukur sebesar nilai wajar ditambah biaya transaksi, kecuali untuk aset keuangan yang diukur pada nilai wajar melalui laba rugi, yang awalnya diukur sebesar nilai wajar.

**Pengukuran Selanjutnya Aset Keuangan**

Aset keuangan Perusahaan dan entitas anak diklasifikasikan sebagai berikut: aset keuangan yang diukur pada nilai wajar melalui laba rugi, pinjaman yang diberikan dan piutang, dan yang tersedia untuk dijual.

**i. Aset Keuangan yang Diukur pada Nilai Wajar Melalui Laba Rugi ("FVTPL")**

Aset keuangan yang diukur pada FVTPL adalah aset keuangan yang dimiliki untuk diperdagangkan atau yang pada saat pengakuan awal telah ditetapkan untuk diukur pada nilai wajar melalui laba rugi. Aset keuangan diklasifikasikan dalam kelompok diperdagangkan jika diperoleh atau dimiliki terutama untuk tujuan dijual atau dibeli kembali dalam waktu dekat, atau bagian dari portfolio instrumen keuangan tertentu yang dikelola bersama dan terdapat bukti mengenai pola ambil untung dalam jangka pendek aktual saat ini, atau merupakan derivatif, kecuali derivatif yang ditetapkan dan efektif sebagai instrumen lindung nilai.

Setelah pengakuan awal, aset keuangan yang diukur pada FVTPL diukur pada nilai wajarnya. Keuntungan atau kerugian yang timbul dari perubahan nilai wajar aset keuangan diakui dalam laba rugi.

**ii. Pinjaman yang Diberikan dan Piutang**

Pinjaman yang diberikan dan piutang adalah aset keuangan non-derivatif

**g. Financial Assets**

**Initial Recognition and Measurement**

All financial assets are recognized and derecognized on the trade date where the purchase or sale of a financial asset is under a contract whose terms require delivery of the financial asset within the time frame established by the market concerned and are initially measured at fair value plus transaction costs, except for those financial assets classified as a fair value through profit or loss, which are initially measured at fair value.

**Subsequent Measurement of Financial Assets**

The Company and its subsidiaries' financial assets are classified into the following specified categories: financial assets at fair value through profit or loss, loans and receivables, and available-for-sale.

**i. Financial Assets at Fair Value Through Profit or Loss ("FVTPL")**

After initial recognition, financial assets at FVTPL are measured at its fair value. Gains or losses arising from a change in the fair value of financial assets are recognized in profit or loss.

dengan pembayaran tetap atau telah ditentukan dan tidak mempunyai kuotasi di pasar aktif, kecuali:

- (a) pinjaman yang diberikan dan piutang yang dimaksudkan untuk dijual dalam waktu dekat dan yang pada saat pengakuan awal ditetapkan sebagai aset keuangan yang diukur pada nilai wajar melalui laba rugi;
- (b) pinjaman yang diberikan dan piutang yang pada saat pengakuan awal ditetapkan sebagai tersedia untuk dijual;
- (c) atau pinjaman yang diberikan dan piutang dalam hal pemilik mungkin tidak akan memperoleh kembali investasi awal secara substansial kecuali yang disebabkan oleh penurunan kualitas pinjaman.

Setelah pengakuan awal, pinjaman yang diberikan dan piutang diukur pada biaya perolehan diamortisasi dengan menggunakan metode suku bunga efektif.

**iii. Aset Keuangan Tersedia untuk Dijual  
("AFS")**

AFS aset keuangan adalah aset keuangan non-derivatif yang ditetapkan baik sebagai AFS atau yang tidak diklasifikasikan sebagai pinjaman yang diberikan dan piutang, dimiliki hingga jatuh tempo atau aset keuangan pada FVTPL.

Setelah pengakuan awal, aset keuangan tersebut diukur sebesar nilai wajar, dimana keuntungan atau kerugian diakui dalam penghasilan komprehensif lain, kecuali untuk kerugian akibat penurunan nilai dan keuntungan atau kerugian akibat perubahan kurs, sampai aset keuangan tersebut dihentikan pengakuannya. Pada saat itu, keuntungan atau kerugian kumulatif yang sebelumnya diakui dalam penghasilan komprehensif lain direklasifikasi dari ekuitas ke laba rugi sebagai penyesuaian reklasifikasi.

Perusahaan mengukur nilai wajar instrumen ekuitas yang tidak tercatat di pasar aktif dengan menggunakan teknik

*determinable payments that are not quoted in an active market, other than:*

- (a) those that intends to sell immediately or in the near term and upon initial recognition designated as at fair value through profit or loss;*
- (b) those that upon initial recognition designated as available for sale;*
- (c) or those for which the holder may not recover substantially all of its initial investment, other than because of credit deterioration.*

*After initial recognition, loans and receivables are measured at amortized cost using the effective interest method.*

**iii. Available-for-Sale Financial Assets

*AFS financial assets are non-derivative financial assets that are either designated as AFS or are not classified as loans and receivables, held to maturity investments or financial assets at FVTPL.*

penilaian berdasarkan asumsi yang wajar. Dalam keadaan tertentu dimana kisaran estimasi nilai wajar yang realistis cukup signifikan dan probabilitas berbagai estimasi tidak dapat dinilai secara wajar, maka Perusahaan mengukur nilai wajar instrumen AFS tersebut pada biaya perolehan dikurangi penurunan nilai.

Dividen atas instrumen ekuitas AFS, jika ada, diakui pada laba rugi pada saat hak Perusahaan dan entitas anak untuk memperoleh pembayaran dividen ditetapkan.

**Metode Suku Bunga Efektif**

Metode suku bunga efektif adalah metode yang digunakan untuk menghitung biaya perolehan diamortisasi dari instrumen keuangan dan metode untuk mengalokasikan pendapatan bunga selama periode yang relevan. Suku bunga efektif adalah suku bunga yang secara tepat mendiskontokan estimasi penerimaan kas di masa datang (mencakup seluruh komisi dan bentuk lain yang dibayarkan dan diterima yang merupakan bagian yang tak terpisahkan dari suku bunga efektif, biaya transaksi dan premium dan diskonto lainnya) selama perkiraan umur instrumen keuangan, atau, jika lebih tepat, digunakan periode yang lebih singkat untuk memperoleh nilai tercatat bersih dari aset keuangan pada saat pengakuan awal.

Pendapatan diakui berdasarkan suku bunga efektif untuk instrumen keuangan.

**Penurunan Nilai Aset Keuangan**

Aset keuangan dievaluasi terhadap indikator penurunan nilai pada setiap akhir tanggal pelaporan. Aset keuangan diturunkan nilainya bila terdapat bukti objektif, sebagai akibat dari satu atau lebih peristiwa yang terjadi setelah pengakuan awal aset keuangan dan peristiwa yang merugikan tersebut berdampak pada estimasi arus kas masa depan atas aset keuangan yang dapat diestimasi secara handal.

Untuk investasi ekuitas AFS yang tercatat dan tidak tercatat di bursa, penurunan yang signifikan atau jangka panjang pada nilai

*Dividends on AFS equity instruments, if any, are recognized in profit or loss when the Company and its subsidiaries' rights to receive the dividends are established.*

**Effective Interest Method**

*The effective interest method is a method of calculating the amortized cost of a financial instrument and of allocating interest income over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash receipts (including all fees and other forms paid or received that form an integral part of the effective interest rate, transaction costs and other premiums or discounts) through the expected life of the financial instrument, or, where appropriate, a shorter period to the net carrying amount on initial recognition.*

*Income is recognized on an effective interest basis for financial instruments.*

**Impairment of Financial Assets**

*Financial assets are assessed for indicators of impairment at the end of each reporting date. Financial assets are impaired where there is objective evidence that, as a result of one or more events that occurred after the initial recognition of the financial asset and the estimated future cash flows of the investment have been affected.*

wajar dari investasi ekuitas di bawah biaya perolehannya dianggap sebagai bukti objektif penurunan nilai.

Untuk aset keuangan lainnya, bukti objektif penurunan nilai termasuk sebagai berikut:

- kesulitan keuangan signifikan yang dialami penerbit atau pihak peminjam; atau
- pelanggaran kontrak, seperti terjadinya wanprestasi atau tunggakan pembayaran pokok atau bunga; atau
- terdapat kemungkinan bahwa pihak peminjam akan dinyatakan pailit atau melakukan reorganisasi keuangan.
- terdapat data yang dapat diobservasi yang mengindikasikan adanya penurunan yang dapat diukur atas estimasi arus kas masa depan dari kelompok aset keuangan sejak pengakuan awal aset, seperti memburuknya status pembayaran pihak peminjam atau kondisi ekonomi yang berkorelasi dengan gagal bayar.

Untuk kelompok aset keuangan tertentu, seperti piutang, aset yang dinilai tidak akan diturunkan secara individual tetapi penurunan secara kolektif. Bukti objektif dari penurunan nilai portofolio piutang dapat termasuk pengalaman Perusahaan dan entitas anak atas tertagihnya piutang di masa lalu, peningkatan keterlambatan penerimaan pembayaran piutang dari rata-rata periode kredit, dan juga pengamatan atas perubahan kondisi ekonomi nasional atau lokal yang berkorelasi dengan *default* atas piutang.

Untuk aset keuangan yang diukur pada biaya perolehan diamortisasi, jumlah kerugian penurunan nilai merupakan selisih antara nilai tercatat aset keuangan dengan nilai kini dari estimasi arus kas masa datang yang didiskontokan menggunakan tingkat suku bunga efektif awal dari aset keuangan.

Nilai tercatat aset keuangan tersebut dikurangi dengan kerugian penurunan nilai secara langsung atas aset keuangan, kecuali piutang yang nilai tercatatnya dikurangi melalui penggunaan akun cadangan kerugian penurunan nilai

- *observable data indicating that there is a measurable decrease in the estimated future cash flows from a group of financial assets since the initial recognition, such as adverse changes in the payment status of borrowers or economic condition that correlate with defaults.*

*For certain categories of financial asset, such as receivables, assets that are assessed not to be impaired individually are, in addition, assessed for impairment on a collective basis. Objective evidence of impairment for a portfolio of receivables could include the Company and its subsidiaries' past experiences of collecting payments, an increase in the number of delayed payments in the portfolio past the average credit period, as well as observable changes in national or local economic conditions that correlate with default on receivables.*

Pemulihan kemudian dari jumlah yang sebelumnya telah dihapuskan dikreditkan terhadap akun cadangan kerugian penurunan nilai piutang. Perubahan nilai tercatat akun cadangan kerugian penurunan nilai piutang diakui dalam laba rugi.

Jika aset keuangan AFS dianggap menurun nilainya, keuntungan kumulatif yang sebelumnya telah diakui dalam ekuitas dicatat ke laba rugi.

Pengecualian dari instrumen ekuitas AFS, jika, pada periode berikutnya, jumlah penurunan nilai berkurang dan penurunan dapat dikaitkan secara objektif dengan sebuah peristiwa yang terjadi setelah penurunan nilai tersebut diakui, kerugian penurunan nilai yang sebelumnya diakui dipulihkan melalui laba rugi hingga nilai tercatat investasi pada tanggal pemulihan penurunan nilai tidak melebihi biaya perolehan diamortisasi sebelum pengakuan kerugian penurunan nilai dilakukan.

Dalam hal efek ekuitas AFS, kerugian penurunan nilai yang sebelumnya diakui dalam laba rugi tidak boleh dipulihkan melalui laba rugi. Setiap kenaikan nilai wajar setelah penurunan nilai diakui secara langsung ke penghasilan komprehensif lain.

**Penghentian Pengakuan Aset Keuangan**

Perusahaan dan entitas anak menghentikan pengakuan aset keuangan jika dan hanya jika hak kontraktual atas arus kas yang berasal dari aset berakhir, atau Perusahaan dan entitas anak mentransfer aset keuangan dan secara substansial mentransfer seluruh risiko dan manfaat atas kepemilikan aset kepada entitas lain. Jika Perusahaan dan entitas anak tidak mentransfer serta tidak memiliki secara substansial atas seluruh risiko dan manfaat kepemilikan serta masih mengendalikan aset yang ditransfer, maka Perusahaan dan entitas anak mengakui keterlibatan berkelanjutan atas aset yang

*When an AFS financial asset is considered to be impaired, cumulative gains previously recognized in equity are recognized in profit or loss.*

*With the exception of AFS equity instruments, if in a subsequent period, the amount of the impairment loss decreases and the decrease can be related objectively to an event occurring after the impairment was recognized, the previously recognized impairment loss is reversed through profit or loss to the extent that the carrying amount of the investment at the date the impairment is reversed does not exceed what the amortized cost would have been had the impairment not been recognized.*

pengukuran dapat diobservasi dan signifikansi input terhadap keseluruhan pengukuran nilai wajar:

- (i) Harga kuotasian (tanpa penyesuaian) di pasar aktif untuk aset atau liabilitas yang identik yang dapat diakses pada tanggal pengukuran (Level 1);
- (ii) Input selain harga kuotasian yang termasuk dalam Level 1 yang dapat diobservasi untuk aset atau liabilitas, baik secara langsung maupun tidak langsung (Level 2);
- (iii) Input yang tidak dapat diobservasi untuk aset atau liabilitas (Level 3).

Dalam mengukur nilai wajar aset atau liabilitas, Perusahaan dan entitas anak sebisa mungkin menggunakan data pasar yang dapat diobservasi. Apabila nilai wajar aset atau liabilitas tidak dapat diobservasi secara langsung, Perusahaan dan entitas anak menggunakan teknik penilaian yang sesuai dengan keadaannya dan memaksimalkan penggunaan input yang dapat diobservasi yang relevan dan meminimalkan penggunaan input yang tidak dapat diobservasi.

Perpindahan antara level hierarki nilai wajar diakui oleh Perusahaan dan entitas anak pada akhir periode pelaporan dimana perpindahan terjadi.

**Lindung nilai**

Dalam bisnis normal, Perusahaan dan entitas anak terekspos risiko nilai tukar dan tingkat bunga. Untuk melindungi dari risiko-risiko ini sesuai dengan kebijakan treasury tertulis dari manajemen, Perusahaan dan entitas anak menggunakan derivatif dan instrumen lindung nilai lainnya. PSAK 55 memperbolehkan tiga jenis hubungan lindung nilai:

- Lindung nilai atas nilai wajar;
- Lindung nilai atas arus kas;
- Lindung nilai atas investasi neto pada kegiatan usaha luar negeri.

Perusahaan dan entitas anak menggunakan akuntansi lindung nilai hanya jika seluruh kondisi berikut ini terpenuhi pada saat dimulainya lindung nilai:

*measurement are observable and the significance of the inputs to the fair value measurement in its entirety:*

- (i) Quoted prices (unadjusted) in active markets for identical assets or liabilities that can be accessed at the measurement date (Level 1);*
- (ii) Inputs other than quoted prices included in Level 1 that are observable for the assets or liabilities, either directly or indirectly (Level 2);*
- (iii) Unobservable inputs for the assets or liabilities (Level 3).*

*When measuring the fair value of an asset or a liability, the Company and its subsidiaries use market observable data to the extent possible. If the fair value of an asset or a liability is not directly observable, the Company and its subsidiaries use valuation techniques that are appropriate in the circumstances and maximizes the use of relevant observable inputs and minimizes the use of unobservable inputs.*

*Transfers between levels of the fair value hierarchy are recognized by the Company and its subsidiaries at the end of the reporting period during which the change occurred.*

**Hedging**

*In the normal course of business, the Company and its subsidiaries are exposed to currency and interest rate risks. In order to hedge these risks in accordance with the management's written treasury policies, the Company and its subsidiaries use derivatives and other hedging instruments. PSAK 55 allows three types of hedging relationships:*

- Fair value hedge;*
- Cash flow hedge;*
- Hedge of a net investment in a foreign operation.*

*The Company and its subsidiaries use hedge accounting only when the following conditions at the inception of the hedge are satisfied:*

- Terdapat penetapan dan pendokumentasian formal atas hubungan lindung nilai. Dokumentasi lindung nilai mencakup strategi lindung nilai dan metode yang digunakan untuk menilai efektivitas lindung nilai; dan
- Efektivitas hubungan lindung nilai diperkirakan sangat tinggi di sepanjang masa dari lindung nilai.

Dokumentasi di atas selanjutnya dimutakhirkan pada setiap periode pelaporan untuk menilai apakah lindung nilai tetap diperkirakan akan sangat efektif di sepanjang sisa masa lindung nilai.

**Lindung nilai atas arus kas**

Bagian dari keuntungan atau kerugian atas instrumen lindung nilai yang ditetapkan sebagai lindung nilai yang efektif diakui (setelah pajak) dalam penghasilan komprehensif lain dan diakumulasi dalam cadangan lindung nilai, dan bagian yang tidak efektif atas keuntungan atau kerugian dari instrumen lindung nilai tersebut diakui dalam laba rugi.

Tidak dilakukan penyesuaian atas item yang dilindung nilai.

Jika suatu lindung nilai atas prakiraan transaksi yang kemudian menimbulkan pengakuan suatu aset keuangan atau liabilitas keuangan, maka keuntungan atau kerugian terkait yang sebelumnya diakui dalam penghasilan komprehensif lain direklasifikasi dari ekuitas ke laba rugi sebagai penyesuaian reklasifikasi pada periode yang sama pada saat lindung nilai atas prakiraan arus kas mempengaruhi laba rugi.

Jika suatu lindung nilai atas prakiraan transaksi yang kemudian menimbulkan pengakuan aset non-keuangan atau liabilitas non-keuangan, atau jika suatu lindung nilai atas prakiraan transaksi atas aset non-keuangan atau liabilitas non-keuangan menjadi komitmen pasti dimana akuntansi lindung nilai atas nilai wajar diterapkan, maka Perusahaan

- The hedging instrument and the hedged item are clearly identified;
- Formal designation and documentation of the hedging relationship is in place. Such hedge documentation includes the hedge strategy and the method used to assess the hedge's effectiveness; and
- The hedge relationship is expected to be highly effective throughout the life of the hedge.

The above documentation is subsequently updated at each reporting date in order to assess whether the hedge is still expected to be highly effective over its remaining life.

**Cash flow hedge**

The portion of the gain or loss on the hedging instrument that is determined to be an effective hedge is recognized (net after tax) in other comprehensive income and accumulated under hedging reserve, and the ineffective portion of the gain or loss on the hedging instrument is recognized in profit or loss.

No adjustment is made to the hedged item.

If a hedge of a forecast transaction subsequently results in the recognition of a financial asset or a financial liability, the associated gains or losses that were recognized in other comprehensive income are reclassified from equity to profit or loss as a reclassification adjustment in the same period or periods during which the hedged forecast cash flows affects profit or loss.

If a hedge of a forecast transaction subsequently results in the recognition of a non-financial asset or a non-financial liability, or a forecast transaction for a non-financial asset or non-financial liability becomes a firm commitment for which fair value hedge accounting is applied, then the Company reclassifies the associated gains and losses that were previously

Selisih antara hasil emisi (setelah dikurangi biaya transaksi) dan penyelesaian atau pelunasan pinjaman diakui selama jangka waktu pinjaman menggunakan metode suku bunga efektif.

*Any difference between the proceeds (net of transaction costs) and the settlement or redemption of borrowings is recognized over the term of the borrowings using the effective interest rate method.*

Sukuk ijarah diakui pada saat entitas menjadi pihak yang terikat dengan ketentuan penerbitan sukuk ijarah. Sukuk ijarah diakui sebesar nilai nominal disesuaikan dengan premium atau diskonto dan biaya transaksi terkait dengan penerbitannya.

*After initial recognition, if the carrying amount is different from the nominal value caused by the premium or discount, then the difference is amortized on straight-line basis over the period of the sukuk ijarah.*

**Penghentian Pengakuan Liabilitas Keuangan**

**Derecognition of Financial Liabilities**

*The Company and its subsidiaries derecognize financial liabilities, when and only when the Company and its subsidiaries' obligations are discharged, cancelled or expired. The difference between the carrying amount of the financial liability derecognized and the considerations paid and payable is recognized in profit or loss.*

Perubahan kebijakan akuntansi tersebut diterapkan secara prospektif sesuai dengan PSAK 25 (Revisi 2015).

Kelas aset di atas, disajikan sebesar nilai wajar dikurangi penyusutan dan penurunan nilai. Tanah tidak disusutkan. Penilaian terhadap aset-aset tersebut dilakukan oleh penilai independen eksternal yang terdaftar di OJK. Penilaian atas aset tersebut dilakukan secara berkala untuk memastikan bahwa nilai wajar aset yang direvaluasi tidak berbeda secara material dengan nilai tercatatnya. Aset yang tidak mengalami perubahan nilai wajar secara signifikan wajib direvaluasi paling kurang setiap 3 (tiga) tahun. Akumulasi penyusutan pada tanggal revaluasi dieliminasi terhadap nilai tercatat bruto aset, dan nilai netonya disajikan kembali sebesar nilai revaluasian aset tetap.

Aset tetap lainnya disajikan sebesar harga perolehan dikurangi dengan penyusutan dan kerugian penurunan nilai. Harga perolehan termasuk pengeluaran yang dapat diatribusikan secara langsung atas perolehan aset tersebut.

Kenaikan nilai tercatat yang timbul dari revaluasi aset tetap yang menggunakan model revaluasi dikreditkan pada "surplus revaluasi aset" sebagai bagian dari penghasilan komprehensif lain. Penurunan yang menghapus nilai kenaikan sebelumnya atas aset yang sama dibebankan terhadap "surplus revaluasi aset" sebagai bagian dari penghasilan komprehensif lain; penurunan lainnya dibebankan pada laba rugi.

Biaya awal untuk mendapatkan hak atas tanah diakui sebagai bagian biaya akuisisi tanah dan biaya-biaya tersebut tidak disusutkan. Aset, kecuali tanah, disusutkan hingga mencapai estimasi nilai sisa dengan menggunakan metode garis lurus hingga mencapai estimasi nilai sisa selama masa manfaatnya sebagai berikut:

*That change in accounting policy is applied prospectively in accordance with SFAS 25 (Revised 2015).*

*The classes of asset above, are shown at fair value less subsequent depreciation and impairment losses. Land is not depreciated. Valuation of those assets is performed by external independent valuers which are registered with the FSA. Valuations are performed with sufficient regularity to ensure that the fair value of a revalued asset does not differ materially from its carrying amount. Assets that do not change significantly in fair value are mandatory to be re-evaluate at least every 3 (three) years. Any accumulated depreciation at the date of revaluation is eliminated against the gross carrying amount of the asset and the net amount is restated to the revalued amount of the property, plant and equipment.*

*All other property, plant and equipment are stated at historical cost less depreciation and impairment losses. Historical cost includes expenditure that is directly attributable to the acquisition of the items.*

*Increases in the carrying amount arising on revaluation of property, plant and equipment that use revaluation model are credited to "asset revaluation surplus" as part of other comprehensive income. Decreases that offset previous increases of the same asset are debited against "asset revaluation surplus" as part of other comprehensive income; all other decreases are charged to profit or loss.*

*Initial costs incurred to obtain land are recognized as part of the acquisition cost of the land and these costs are not depreciated. Assets, except land, are depreciated to their residual value using the straight-line method to their residual values over their expected useful life as follows:*

**k. Penurunan Nilai Aset Non-keuangan**

Aset yang diamortisasi atau disusutkan dikaji untuk penurunan nilai jika terdapat kejadian atau perubahan keadaan yang mengindikasikan bahwa jumlah tercatat kemungkinan tidak dapat dipulihkan. Kerugian penurunan nilai diakui sebesar kelebihan jumlah tercatat aset atas jumlah terpulihkannya. Jumlah terpulihkan merupakan jumlah yang lebih tinggi antara nilai wajar aset dikurangi biaya untuk menjual dan nilai pakainya. Dalam rangka menguji penurunan nilai, aset dikelompokkan hingga unit terkecil yang menghasilkan arus kas terpisah (unit penghasil kas). Aset non-keuangan yang mengalami penurunan nilai, ditelaah untuk menentukan apakah terdapat kemungkinan pembalikan penurunan nilai, pada setiap tanggal pelaporan.

**k. Impairment of Non-Financial Assets**

*Assets that are subject to amortization or depreciation are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss is recognized for the amount by which the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of an asset's fair value less cost to sell and its value-in-use. For the purposes of assessing impairment, assets are grouped at the lowest level for which there are separately identifiable cash flows (cash generating units). Non-financial assets that have suffered an impairment are reviewed for possible reversal of the impairment at each reporting date.*

Pembalikan rugi penurunan nilai, diakui jika, dan hanya jika, terdapat perubahan estimasi yang digunakan dalam menentukan jumlah terpulihkan aset sejak pengujian penurunan nilai terakhir kali. Pembalikan rugi penurunan nilai tersebut diakui segera dalam laba rugi. Pembalikan tersebut tidak boleh mengakibatkan nilai tercatat aset melebihi biaya perolehan didepresiasi sebelum adanya pengakuan penurunan nilai pada tanggal pembalikan dilakukan.

*Reversal on impairment loss for assets would be recognized if, and only if, there has been a change in the estimates used to determine the asset's recoverable amount since the last impairment test was carried out. Reversal on impairment losses will be immediately recognized in profit or loss. The reversal will not result in the carrying amount of an asset that exceeds what the depreciated cost would have been had the impairment not been recognized at the date at which the impairment was reversed.*

Penyelenggaraan usaha tenaga listrik di Indonesia dikendalikan oleh Pemerintah dan dilaksanakan oleh Perusahaan sebagai BUMN selaku Pemegang Kuasa Usaha Ketenagalistrikan. Pemegang Kuasa Usaha Ketenagalistrikan dan setiap pemegang Izin Usaha Ketenagalistrikan untuk kepentingan umum harus memastikan ketersediaan tenaga listrik di setiap wilayah operasinya.

Perusahaan dan entitas anak mengadakan perjanjian jual beli tenaga listrik, yakni PPA dan ESC, dengan IPP. IPP tersebut merupakan pemegang Izin Usaha Ketenagalistrikan untuk kepentingan umum, yang dapat diserahkan kepada entitas usaha lain dengan tanggung jawab untuk menghasilkan tenaga listrik guna kepentingan umum.

Berdasarkan surat Ketua Bapepam-LK yang kemudian bergabung menjadi bagian dari OJK, No. S-2366/BL/2009 tertanggal 30 Maret 2009, perjanjian penyediaan tenaga listrik oleh IPP kepada Perusahaan dan entitas anak yang termasuk dalam kategori perjanjian pelaksanaan jasa publik ke swasta, dikecualikan dari penerapan ISAK 8 sampai DSAK-IAI menerbitkan interpretasi standar akuntansi yang spesifik mengatur transaksi tersebut.

Manajemen mengevaluasi dampak dari ISAK 16: Perjanjian Konsesi Jasa ("ISAK 16") (efektif berlaku tanggal 1 Januari 2012) terhadap Perjanjian Jual Beli Tenaga Listrik Perusahaan dan entitas anak dengan IPP dan menetapkan bahwa transaksi tersebut tidak termasuk dalam ruang lingkup Interpretasi, yang berisi perlakuan akuntansi untuk operator atas perjanjian konsesi jasa publik ke swasta. Selanjutnya, sesuai dengan surat manajemen tanggal 22 Desember 2011 kepada Ketua Bapepam-LK, manajemen memutuskan untuk menerapkan ketentuan ISAK 8, sesuai dengan PSAK 30, terhadap Perjanjian Jual Beli Tenaga Listrik mulai tanggal 1 Januari 2012.

*The electric power business in Indonesia is controlled by the Government and carried out by the Company as a BUMN, which serves as the holder of an Electricity Business Proxy. The holder of an Electricity Business Proxy and each holder of an Electricity Business License for public use must ensure the adequacy of electric power supply in each of their operating areas.*

*The Company and its subsidiaries entered into power purchase agreements namely PPA and ESC, with IPPs. Those IPPs are holders of Electricity Business License for public use, which may be granted to other business entities with responsibility to generate electricity for public use.*

*Based on letter No. S-2366/BL/2009 dated March 30, 2009 from the Chairman of CM-FISB, which has subsequently been merged into the FSA, power supply arrangements by IPPs to the Company and its subsidiaries that are categorized as public-to-private concession arrangements, are exempted from the application of ISFAS 8, until DSAK-IAI has issued an accounting interpretation that can specifically address such transactions.*

*Management assessed the impact of ISFAS 16: Service Concession Arrangements ("ISFAS 16") (effective January 1, 2012) on the Company's and its subsidiaries' Power Supply Contracts with IPPs and determined that such transactions do not qualify under the scope of the Interpretation, which addresses the accounting of the operators of public-to-private concession arrangements. Subsequently, on its letter dated December 22, 2011 to the Chairman of CM-FISB, management decided to apply the provisions of ISFAS 8, in accordance with SFAS 30, on its Power Supply Contracts since January 1, 2012.*

**Perlakuan akuntansi sejak  
1 Januari 2016**

Pada tanggal 1 Maret 2017 OJK menerbitkan POJK No.6/POJK.04/2017 tentang Perlakuan Akuntansi atas Transaksi Berdasarkan Perjanjian Jual Beli Tenaga Listrik ("POJK No.6") yang diterapkan secara prospektif. Penerapan POJK tersebut mengakibatkan seluruh transaksi berdasarkan PPA dan ESC dengan IPP diperlakukan sebagai transaksi jual beli, meskipun dalam transaksi tersebut mengandung substansi selain jual beli, sehingga evaluasi apakah PPA dan ESC dengan IPP mengandung sewa tidak dilakukan (Catatan 2.a).

Klasifikasi Sewa

Sewa diklasifikasikan sebagai sewa pembiayaan jika sewa tersebut mengalihkan secara substansial seluruh risiko dan manfaat yang terkait dengan kepemilikan aset kepada lessee. Sewa lainnya, yang tidak memenuhi kriteria tersebut diklasifikasikan sebagai sewa operasi.

Pembayaran sewa harus dipisahkan antara bagian yang merupakan beban keuangan dan bagian yang merupakan pengurangan dari liabilitas sewa sehingga mencapai suatu tingkat bunga konstan atas saldo liabilitas. Rental kontinjen dibebankan pada periode terjadinya.

Pembayaran sewa operasi (dikurangi dengan insentif yang diterima dari lessor) diakui sebagai beban dengan dasar garis lurus (*straight-line basis*) selama masa sewa, kecuali terdapat dasar sistematis lain yang lebih mencerminkan pola waktu dari manfaat aset yang dinikmati pengguna. Rental kontinjen diakui dalam sewa operasi sebagai beban di dalam periode terjadinya.

Di tahun 2015 Perusahaan dan entitas anak menetapkan bahwa beberapa perjanjian pembelian tenaga listrik dan perjanjian pembelian energi dengan Penghasil Listrik Independen IPP memenuhi persyaratan sebagai sewa dengan dasar bahwa Perusahaan dan entitas anak dan IPP memiliki perjanjian *take or pay*, dimana Perusahaan dan

**Accounting treatment since  
January 1, 2016**

On March 1, 2017, FSA issued POJK No.6/POJK.04/2017 regarding Accounting Treatment on Transactions based on Power Purchase Agreement ("POJK No.6") which is applied prospectively. The application of the POJK resulted in all transactions based on PPAs and ESCs with IPPs are treated as sale and purchase transactions, regardless those transactions contain substances other than sale and purchase, therefore evaluation on whether PPAs and ESCs with IPPs contain a lease is not performed (Note 2.a).

Lease Classification

Leases are classified as finance leases whenever the terms of the lease transfer substantially all the risks and rewards related to ownership of an asset to the lessee. All other leases are classified as operating leases.

Lease payments are apportioned between finance charges and reduction of the lease liability so as to achieve a constant rate of interest on the remaining balance of the liability. Contingent rents are recognized as expenses in the periods in which they are incurred.

Operating lease payments (net of any incentives received from the lessor) are recognized as expenses on a straight-line basis over the lease term, except where another systematic basis is more representative of the time pattern in which economic benefits from the leased asset are consumed. Contingent rents arising under operating leases are recognized as expenses in the period in which they are incurred.

In 2015, the Company and its subsidiaries determined that certain power purchase agreements and energy sales contracts with IPPs qualify as leases on the basis that the Company and its subsidiaries and the IPPs have take or pay arrangements where the Company and its subsidiaries are taking substantially all electricity and energy output from the power plants. entitas anak mengambil hampir seluruh listrik dan energi yang dihasilkan oleh pembangkit listrik. Jenis perjanjian ini ditetapkan sebagai sewa pembiayaan dimana porsi signifikan dari risiko dan manfaat atas sejumlah pembangkit listrik telah dialihkan ke Perusahaan dan entitas anak dengan dasar bahwa masa sewa adalah untuk sebagian besar umur ekonomis aset dan terdapat opsi beli pada akhir masa sewa.

**m. Pekerjaan Dalam Pelaksanaan**

Pekerjaan dalam pelaksanaan merupakan biaya-biaya yang berhubungan langsung dengan pembangunan aset tetap. Pekerjaan dalam pelaksanaan dinyatakan sebesar biaya perolehan, termasuk biaya pinjaman selama masa pembangunan dari pinjaman yang digunakan untuk pembangunan, beban penyusutan aset tetap yang digunakan dalam pekerjaan pembangunan dan biaya pengujian ketika aset dapat berfungsi setelah dikurangi penjualan listrik ketika masa uji coba. Pekerjaan dalam pelaksanaan akan dipindahkan ke masing-masing aset tetap yang bersangkutan pada saat selesai dan siap digunakan.

**n. Biaya Pinjaman**

Biaya pinjaman yang dapat diatribusikan secara langsung dengan perolehan, konstruksi atau pembuatan aset kualifikasian, merupakan aset yang membutuhkan waktu yang cukup lama agar siap untuk digunakan atau dijual, ditambahkan pada biaya perolehan aset tersebut, sampai dengan saat selesainya aset secara substansial siap untuk digunakan atau dijual.

Untuk pinjaman yang tidak dapat diatribusikan secara langsung pada suatu aset kualifikasian, jumlah yang dikapitalisasi ditentukan dengan mengalikan tingkat kapitalisasi terhadap jumlah yang dikeluarkan untuk memperoleh aset kualifikasian. Tingkat kapitalisasi dihitung berdasarkan rata-rata tertimbang biaya pinjaman yang dibagi dengan jumlah pinjaman yang tersedia selama periode, selain pinjaman yang secara spesifik diambil untuk tujuan memperoleh suatu aset kualifikasian.

*type of arrangement is determined to be a finance lease where a significant portion of the risks and rewards of ownership of certain power plants have been transferred to the Company and its subsidiaries on the basis that the lease term is for the major part of the economic life of the assets and there is a bargain purchase option at the end of the lease term.*

**m. Construction in Progress**

*Construction in progress represents costs directly related to the construction of property, plant and equipment. Construction in progress is stated at cost, which includes borrowing costs during construction on debts incurred to finance the construction, depreciation of property, plant and equipment that were used in the construction and cost of testing whether the asset is functioning properly after deducting sales of electricity during commissioning period. Construction in progress is transferred to the respective property, plant and equipment account when completed and ready for use.*

**n. Borrowing Costs**

*Borrowing costs directly attributable to the acquisition, construction or production of qualifying assets, are assets that necessarily take a substantial period of time to get ready for their intended use or sale, to be added to the cost of those assets, until such time as the assets are substantially ready for their intended use or sale.*

*For borrowings that are not directly attributable to a qualifying asset, the amount to be capitalized is determined by applying a capitalization rate to the amount expensed on the qualifying assets. The capitalization rate is the weighted average of the total borrowings cost applicable to the total borrowings outstanding during the period, other than borrowings made specifically for the purpose of obtaining a qualifying asset.*

*Investment income is earned from the temporary investment of specific borrowings pending their expenditure on qualifying assets is deducted from the borrowing costs eligible for capitalization.*

**o. Properti Investasi**

Properti investasi adalah properti (tanah atau bangunan atau bagian dari suatu bangunan atau kedua-duanya) yang dikuasai oleh pemilik atau penyewa melalui sewa pembiayaan untuk menghasilkan sewa atau untuk kenaikan nilai atau kedua-duanya, dan tidak untuk digunakan dalam produksi atau penyediaan barang atau jasa atau untuk tujuan administratif; atau dijual dalam kegiatan usaha sehari-hari.

Properti investasi diakui sebagai aset jika dan hanya jika besar kemungkinan manfaat ekonomis masa depan yang terkait dengan properti investasi akan mengalir ke entitas; dan biaya perolehan properti investasi dapat diukur dengan andal.

Properti investasi pada awalnya diukur sebesar biaya perolehan, meliputi harga pembelian dan setiap pengeluaran yang dapat diatribusikan secara langsung (biaya jasa hukum, pajak pengalihan properti, dan biaya transaksi lain). Biaya transaksi termasuk dalam pengukuran awal tersebut.

Setelah pengakuan awal, Perusahaan dan entitas anak memilih menggunakan model nilai wajar dan mengukur seluruh properti investasi berdasarkan nilai wajar. Keuntungan atau kerugian yang timbul dari perubahan nilai wajar properti investasi diakui dalam laba rugi pada periode terjadinya.

**o. Investment Properties**

*Investment properties are properties (land or a building or part of a building or both) held by the owner or the lessee under a finance lease to earn rentals or for capital appreciation or both, rather than for use in the production or supply of goods or services or for administrative purposes; or sale in the daily business activities.*

*Investment property is recognized as an asset when, and only when it is probable that the future economic benefits that are associated with the investment property will flow to the entity; and the cost of the investment property can be measured reliably.*

*An investment property shall be measured initially at its cost, comprises its purchase price and any directly attributable expenditure (professional fees for legal services, property transfer taxes and other transaction costs). Transaction costs are included in the initial measurement.*

*After initial recognition, the Company and its subsidiaries choose to use fair value model and measure all of its investment property at fair value. Any gain or loss arising from a change in the fair value of investment property is recognized in profit or loss for the period in which it arises.*

**p. Investasi pada Entitas Asosiasi dan Ventura Bersama**

Investasi pada Entitas Asosiasi

Entitas asosiasi adalah seluruh entitas dimana Perusahaan dan entitas anak memiliki pengaruh signifikan namun bukan pengendalian, biasanya melalui kepemilikan hak suara antara 20% dan 50%. Investasi entitas asosiasi dicatat dengan metode ekuitas. Sesuai metode ekuitas, investasi pada awalnya dicatat pada biaya, dan nilai tercatat akan meningkat atau menurun untuk mengakui bagian investor atas laba rugi. Di dalam investasi Perusahaan dan entitas anak atas entitas asosiasi termasuk *goodwill* yang diidentifikasi ketika akuisisi.

**p. Investments in Associates and Joint Ventures**

Investments in Associates

Associates are all entities over which the Company and its subsidiaries have significant influence but not control, generally accompanying a shareholding of between 20% and 50% of the voting rights. Investments in associates are accounted for using the equity method of accounting. Under the equity method, the investment is initially recognized at cost and the carrying amount is increased or decreased to recognize the investor's share of the profit or the loss of the investee after the date of acquisition. The Company and its subsidiaries investment in associates includes goodwill identified on acquisition.

Perubahan dan penerimaan distribusi dari entitas asosiasi setelah tanggal perolehan disesuaikan terhadap nilai tercatat investasi. Bagian Perusahaan dan entitas anak atas kerugian entitas asosiasi yang melebihi nilai tercatat dari investasi (yang mencakup semua kepentingan jangka panjang, secara substansi, merupakan bagian dari Perusahaan dan nilai investasi bersih entitas anak dalam entitas asosiasi) diakui hanya sebatas bahwa Perusahaan dan entitas anak telah mempunyai kewajiban hukum atau kewajiban konstruktif atau melakukan pembayaran atas kewajiban entitas asosiasi.

Keuntungan yang belum direalisasi atas transaksi antara Perusahaan dan entitas anak dengan entitas asosiasi dieliminasi sebesar bagian Perusahaan dan entitas anak dalam entitas asosiasi. Kerugian yang belum direalisasi juga dieliminasi kecuali transaksi tersebut memberikan bukti penurunan nilai atas aset yang ditransfer. Kebijakan akuntansi entitas asosiasi akan disesuaikan, apabila diperlukan, agar konsisten dengan kebijakan akuntansi Perusahaan dan entitas anak.

These post-acquisition movements and distributions received from an associate are adjusted against the carrying amounts of the investment. Losses of the associates in excess of the Company and its subsidiaries' interests in those associates (which includes any long-term interests that, in substance, form part of the Company and its subsidiaries' net investment in the associate) are recognized only to the extent that the Company and its subsidiaries have incurred legal or constructive obligations or made payments on behalf of the associate.*

**dd. Informasi Segmen**

Segmen operasi diidentifikasi berdasarkan laporan internal mengenai komponen dari Perusahaan dan entitas anak yang secara regular direviu oleh "pengambil keputusan operasional" dalam rangka mengalokasikan sumber daya dan menilai kinerja segmen operasi.

Segmen yang dilaporkan adalah segmen operasi individual atau suatu grup segmen operasi yang informasi segmennya harus dilaporkan secara terpisah. Penggabungan satu atau lebih segmen operasi diperbolehkan ketika memenuhi kriteria tertentu, kriteria utama yang harus dipenuhi adalah segmen operasi harus memiliki karakteristik ekonomis yang sejenis (contoh margin keuntungan, persebaran, tingkat pertumbuhan penjualan, dll). Pertimbangan signifikan diperlukan ketika menentukan penggabungan segmen operasi.

Wilayah Jawa Bagian Barat, Jawa Bagian Tengah dan Jawa Bagian Timur digabungkan sebagai satu segmen operasi dikarenakan memiliki karakteristik konsumen yang sejenis.

Informasi yang digunakan oleh pengambil keputusan operasional dalam rangka alokasi sumber daya dan penilaian kinerja mereka dikategorikan berdasarkan lokasi geografis di mana penjualan tenaga listrik dilakukan.

**dd. Segment Information**

Operating segments are identified on the basis of internal reports about components of the Company and its subsidiaries and are regularly reviewed by the "chief operating decision maker" in order to allocate resources to the segments and to assess their performances.

Reportable segments are individual operating segments or a group of operating segments for which segment information must be separately reported. Aggregation of one or more operating segments into a single reportable segment is permitted (but not required) where certain conditions are met, the principal condition being that the operating segments should have similar economic characteristics (for example profit margin, spreads, sales growth rates, etc). Whether multiple operating segments can be aggregated into a single reportable segment is a matter of significant judgement.

West Part of Java Area, Central Part of Java Area and East Part of Java Area is aggregated as a single reportable segment due to similarity the consumer's characteristic.

Information reported to the chief operating decision maker for the purposes of resource allocation and assessment of their performance is grouped based on the geographical location of where electricity sales are made.

**4. Pertimbangan Kritis Akuntansi dan Estimasi Akuntansi yang Signifikan**

Dalam rangka penerapan kebijakan akuntansi Perusahaan dan entitas anak, sebagaimana dijelaskan dalam Catatan 3, manajemen diharuskan untuk membuat pertimbangan, estimasi dan asumsi tentang nilai aset dan liabilitas yang tidak tersedia dari sumber lain. Estimasi dan asumsi berdasarkan pengalaman historis dan faktor lain yang dianggap relevan. Hasil aktual dapat berbeda dari estimasi tersebut.

**4. Critical Accounting Judgments and Significant Accounting Estimates**

In the application of the Company and its subsidiaries' accounting policies, which are described in Note 3, the management is required to make judgments, estimates and assumptions about the carrying amounts of assets and liabilities that are not readily apparent from other sources. The estimates and associated assumptions are based on historical experience and other factors that are considered to be relevant. Actual results may differ from these estimates.

Estimasi dan asumsi yang mendasari direviu secara berkelanjutan. Revisi terhadap estimasi akuntansi akan diakui pada periode dimana estimasi tersebut direvisi, jika revisi tersebut hanya berpengaruh terhadap periode tersebut, atau pada periode revisi dan periode berikutnya jika revisi tersebut mempengaruhi periode tersebut.

**Pertimbangan Kritis dalam Penerapan Kebijakan Akuntansi**

Dalam proses penerapan kebijakan akuntansi yang dijelaskan dalam Catatan 3, Perusahaan dan entitas anak telah menentukan hal-hal berikut yang memerlukan pertimbangan signifikan:

Nilai Wajar Pembangkit Listrik Di Dalam Sewa Pembiayaan

Sejumlah aset tetap dicatat berdasarkan sewa pembiayaan menurut PSAK 30. Pada saat dimulainya sewa, Perusahaan mengakui aset dan liabilitas sewa pembiayaan sebesar nilai wajar pembangkit listrik yang disewa atau, jika lebih rendah, nilai kini dari pembayaran sewa minimum, yang ditentukan pada awal masa sewa.

Perusahaan menetapkan nilai wajar dari pembangkit listrik yang disewa dengan menerapkan teknik penilaian yang sesuai dan asumsi-asumsi yang memadai, termasuk estimasi biaya yang perlu dikeluarkan untuk membangun pembangkit listrik terkait, suku bunga implisit dalam sewa dan nilai sisa aset pada masa akhir kontrak. Perubahan-perubahan selanjutnya atas asumsi yang digunakan untuk menentukan nilai wajar pada awal masa sewa tidak akan merubah nilai aset pembiayaan di masa mendatang.

Biaya Penyambungan Pelanggan

Perusahaan dan entitas anak mempertimbangkan semua fakta dan kondisi yang relevan untuk menentukan pengakuan pendapatan terkait biaya penyambungan pelanggan. Untuk itu, Perusahaan perlu menentukan kewajiban yang timbul sehubungan dengan penerimaan biaya penyambungan dari pelanggan.

*The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized in the period which the estimate is revised if the revision affects only that period, or in the period of the revision and future periods if the revision affects both current and future periods.*

**Critical Judgments in Applying Accounting Policies**

*In the process of applying the accounting policies described in Note 3, the Company and its subsidiaries have identified the following matters under which significant judgments are made:*

Fair Value of Power Plants Held Under Finance Leases

*A number of property, plant and equipment are recorded based on finance lease arrangement, in accordance with SFAS 30. At the commencement of the lease, the Company recognizes the finance leased asset and liability at an amount equal to the fair value of the power plant or, if lower, the present value of the minimum lease payments, determined at the inception of the lease.*

*The Company determined the fair value of the finance leased power plant by applying the appropriate valuation techniques and assumptions, including the expected cost to build the power plant, the implicit interest rate of the lease and the residual value of the asset at the end of the contract. Any subsequent changes to the assumptions used to measure fair value at inception do not affect the subsequent measurement amount of the leased asset.*

Revenues from Customers' Connection Fees

*The Company and its subsidiaries have considered all relevant facts and circumstances to determine the exact timing of revenue recognition pertaining to connection fees paid by customers. To do so, the Company needs to determine what performance obligations it has as a result of receiving connection fees.*

Perusahaan dan entitas anak mempertimbangkan fakta bahwa kewajiban untuk menyediakan tenaga listrik secara berkelanjutan diatur dalam Undang-Undang Ketenagalistrikan tahun 2009 dan semua pelanggan dikenakan tarif listrik yang telah ditentukan oleh Pemerintah Republik Indonesia untuk penggunaan tenaga listrik (terlepas dari jumlah biaya penyambungan yang dibayarkan). Oleh karena itu, penerimaan biaya penyambungan tidak menimbulkan kewajiban terpisah bagi Perusahaan dan entitas anak untuk menyediakan akses listrik secara berkelanjutan kepada pelanggan.

Perusahaan dan entitas anak menyimpulkan bahwa menghubungkan pelanggan ke jaringan listrik Perusahaan merupakan jasa yang diberikan untuk mendapatkan biaya penyambungan dari pelanggan. Jasa koneksi diserahkan kepada pelanggan dan merepresentasikan nilai yang berdiri sendiri (*stand-alone value*) untuk pelanggan tersebut. Sebagai hasilnya, Perusahaan dan entitas anak mencatat biaya penyambungan yang diterima dari pelanggan untuk memperoleh atau membangun aset tetap yang digunakan untuk menghubungkan pelanggan ke jaringan listrik Perusahaan sebagai pendapatan pada saat Perusahaan menyelesaikan kewajiban atas jasa koneksi terkait.

Kepentingan dalam Pengaturan Bersama

Pertimbangan diperlukan untuk menentukan ketika Perusahaan dan entitas anak memiliki pengendalian bersama, yang membutuhkan penilaian mengenai aktivitas yang relevan dan ketika keputusan yang berkaitan dengan aktivitas tersebut membutuhkan persetujuan dengan suara bulat. Perusahaan dan entitas anak menentukan bahwa aktivitas yang relevan untuk pengaturan bersama adalah aktivitas yang berkaitan dengan operasi dan pengambilan keputusan dalam pengaturan tersebut.

Pertimbangan juga diperlukan untuk mengklasifikasikan pengaturan bersama sebagai pengendalian bersama atau ventura bersama. Pengklasifikasian pengaturan tersebut mengharuskan Perusahaan dan entitas anak untuk menilai hak dan kewajiban yang timbul dari pengaturan tersebut. Secara khusus, Perusahaan dan entitas anak mempertimbangkan:

*The Company and its subsidiaries considered the facts that the obligation to provide ongoing supply of electricity is regulated by the 2009 Electricity Law and that the Company charges all customers the same regulated tariff for electricity usage prescribed by the Government of Republic of Indonesia (regardless of the amount of connection fees paid by the customers). Therefore, the receipt of connection fees does not create a separate performance obligation for the Company and its subsidiaries to provide ongoing electricity supply to its customers.*

*The Company and its subsidiaries conclude that connecting the customers to its network is the only service to be delivered in exchange for the connection fees. A service connection is delivered to the customer and represents stand-alone value for that customer. Consequently, the Company and its subsidiaries recognize connection fees received from customers that are used to construct or acquire property, plant and equipment to connect the customers to its network as revenues when the Company completes the connection services.*

Interest in Joint Arrangements

*Judgement is required to determine when the Company and its subsidiaries have joint control, which requires an assessment of the relevant activities and when the decisions in relation to those activities require unanimous consent. The Company and its subsidiaries' have determined that the relevant activities for its joint arrangements are those relating to the operating and capital decisions of the arrangement.*

*Judgement is also required to classify a joint arrangement as either a joint operation or a joint venture. Classifying the arrangement requires the Company and its subsidiaries to assess its rights and obligations arising from the arrangement. Specifically, it considers:*

- Struktur dari pengaturan bersama - apakah dibentuk melalui kendaraan terpisah
- Ketika pengaturan tersebut terstruktur melalui kendaraan terpisah, Perusahaan dan entitas anak juga mempertimbangkan hak dan kewajiban yang timbul dari:
  - Bentuk legal dari kendaraan terpisah;
  - Persyaratan dari perjanjian kontraktual; dan
  - Fakta dan kondisi lain (ketika relevan).

Penilaian ini sering membutuhkan pertimbangan yang signifikan dan kesimpulan yang berbeda mengenai pengendalian bersama dan apakah pengaturan tersebut merupakan operasi bersama atau ventura bersama, dapat memiliki dampak material terhadap akuntansi.

Perusahaan dan entitas anak memiliki pengaturan bersama yang terstruktur melalui ventura bersama, yaitu PT Rajamandala Electric Power, PT Perta Daya Gas, PT Bajradaya Sentranusa, PT Komipo Pembangkitan Jawa Bali, PT Bukit Pembangkit Innovative, PT Rekind Daya Mamuju, PT Unelec Indonesia, PT Crompton Prima Switchgear Indonesia, PT Shenhua Guohua Pembangkitan Jawa Bali, PT Guohua Taidian Pembangkitan Jawa Bali, PT GCL Indotenaga, PT North Sumatera Hydro Energy dan PT Indo Raya Tenaga. Struktur dan persyaratan dari perjanjian kontraktual mengindikasikan bahwa Perusahaan dan entitas anak memiliki hak atas aset bersih dari pengaturan bersama tersebut. Perusahaan dan entitas anak menilai fakta dan kondisi lain yang berkaitan dengan pengaturan ini dan kesimpulan final dari penilaian yang dilakukan adalah pengaturan tersebut merupakan ventura bersama (Catatan 8).

**Sumber Ketidakpastian Estimasi**

Asumsi utama mengenai masa depan dan sumber estimasi lainnya pada akhir periode pelaporan, yang memiliki risiko signifikan yang mengakibatkan penyesuaian material terhadap jumlah tercatat aset dan liabilitas dalam periode pelaporan berikutnya dijelaskan dibawah ini:

- *The structure of the joint arrangement - whether it is structured through a separate vehicle*
- *When the arrangement is structured through a separate vehicle, the Company and its subsidiaries also consider the rights and obligations arising from:*
  - *The legal form of the separate vehicle;*
  - *The terms of the contractual arrangement; and*
  - *Other facts and circumstances (when relevant).*

*This assessment often requires significant judgement and a different conclusion on joint control and also whether the arrangement is a joint operation or a joint venture, may materially impact the accounting.*

*The Company and its subsidiaries have joint arrangements which are structured through joint ventures, namely PT Rajamandala Electric Power, PT Perta Daya Gas, PT Bajradaya Sentranusa, PT Komipo Pembangkitan Jawa Bali, PT Bukit Pembangkit Innovative, PT Rekind Daya Mamuju, PT Unelec Indonesia, PT Crompton Prima Switchgear Indonesia, PT Shenhua Guohua Pembangkitan Jawa Bali, PT Guohua Taidian Pembangkitan Jawa Bali, PT GCL Indotenaga, PT North Sumatera Hydro Energy and PT Indo Raya Tenaga. These structure and the terms of the contractual arrangement indicate that the Company and its subsidiaries have rights to the net assets of the arrangements. The Company and its subsidiaries also assessed the other facts and circumstances relating to these arrangements and the final conclusions were that the arrangement was joint ventures (Note 8).*

**Sources of Estimation Uncertainty**

*The key assumptions concerning future and other key sources of estimation at the end of the reporting period, which have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year, are discussed below:*

Rugi Penurunan Nilai Pinjaman Diberikan dan Piutang

Perusahaan dan entitas anak menilai penurunan nilai pinjaman diberikan dan piutang pada setiap tanggal pelaporan. Dalam menentukan apakah rugi penurunan nilai harus dicatat dalam laba rugi, manajemen membuat penilaian, apakah terdapat bukti objektif bahwa kerugian telah terjadi. Manajemen juga membuat penilaian atas metodologi dan asumsi untuk memperkirakan jumlah dan waktu arus kas masa depan yang direviu secara berkala untuk mengurangi perbedaan antara estimasi kerugian dan kerugian aktualnya. Nilai tercatat pinjaman diberikan dan piutang diungkapkan dalam Catatan 14 dan 17.

Taksiran Masa Manfaat Ekonomis Aset Tetap dan Properti Investasi

Nilai tercatat aset tetap dan properti investasi diungkapkan dalam Catatan 6 dan 7.

Perubahan masa manfaat aset tetap dapat mempengaruhi jumlah biaya penyusutan yang diakui dan nilai tercatat aset tetap.

Nilai Wajar Aset Tetap dan Properti Investasi yang Menggunakan Model Revaluasi

Pada tanggal 31 Desember 2015, Perusahaan dan entitas anak melakukan perubahan kebijakan akuntansi dari model biaya menjadi model revaluasi untuk kelas aset tertentu. Pelaksanaan revaluasi aset tetap tersebut dilakukan oleh penilai publik independen.

Dalam proses penilaian, manajemen, dengan bantuan penilai publik independen, menentukan data dan asumsi, menelaah metode penilaian serta berdiskusi dengan penilai. Pendekatan dan metode yang digunakan dalam melakukan revaluasi tergantung pada kelas aset. Walaupun data dan asumsi Perusahaan dan entitas anak dianggap tepat dan wajar, namun perubahan signifikan pada data input atau asumsi yang digunakan dapat berpengaruh secara signifikan terhadap nilai aset yang menggunakan model revaluasi.

Impairment Loss on Loans and Receivables

The Company and its subsidiaries assess their loans and receivables for impairment at each reporting date. In determining whether an impairment loss should be recorded in profit or loss, management makes a judgement as to whether there is an objective evidence that the loss event has occurred. Management also makes judgement as to the methodology and assumptions for estimating the amount and timing of future cash flows which are reviewed regularly to reduce any difference between loss estimate and actual loss. The carrying amount of loans and receivables are disclosed in Notes 14 and 17.

Estimated Useful Lives of Property, Plant and Equipment and Investment Properties

The carrying amounts of property, plant and equipment and investment properties are disclosed in Notes 6 and 7, respectively.

A change in the estimated useful life of any item of property, plant and equipment would affect the recorded depreciation expense and the carrying values of property, plant and equipment.

Fair Value of Property, Plant and Equipment and Investment Properties That Use Revaluation Model

On December 31, 2015, the Company and its subsidiaries changed their accounting policy from cost model to revaluation model for certain class of assets. The property, plant and equipment revaluation was performed by an independent public valuer.

Management, with the assistance of independent public valuer, determines the data inputs and assumption, assesses valuation method and hold discussions with the valuers as part of the valuation process. The approaches and methods used in the revaluation depend on the assets class. While it is believed that the Company and its subsidiaries' data and assumptions are reasonable and appropriate, significant changes in data inputs or significant changes in assumptions may materially affect the value of assets that use revaluation model.

Rincian dari pendekatan dan data input signifikan yang digunakan dalam melakukan revaluasi aset tetap dan properti investasi diungkapkan masing-masing dalam Catatan 6 dan 7.

Imbalan Pascakerja

Penentuan liabilitas imbalan pascakerja tergantung pada pemilihan asumsi tertentu yang digunakan oleh aktuaris dalam menghitung jumlah liabilitas tersebut. Asumsi tersebut termasuk antara lain tingkat diskonto dan tingkat kenaikan gaji. Realisasi yang berbeda dari asumsi Perusahaan dan entitas anak diakumulasi dan diamortisasi selama periode mendatang dan akibatnya akan berpengaruh terhadap jumlah biaya serta liabilitas yang diakui di masa mendatang. Walaupun asumsi Perusahaan dan entitas anak dianggap tepat dan wajar, namun perubahan signifikan pada kenyataannya atau perubahan signifikan dalam asumsi yang digunakan dapat berpengaruh secara signifikan terhadap liabilitas imbalan pascakerja Perusahaan dan entitas anak.

Asumsi yang digunakan untuk perhitungan liabilitas imbalan pascakerja diungkapkan dalam Catatan 50.

Pajak Penghasilan

Perhitungan beban pajak penghasilan Perusahaan dan entitas anak memerlukan pertimbangan dan asumsi dalam menentukan pengurangan beban tertentu selama proses pengestimasian. Semua pertimbangan dan estimasi yang dibuat manajemen dapat dipertanyakan oleh Direktorat Jenderal Pajak ("DJP"). Sebagai akibatnya, terjadi ketidakpastian dalam penentuan pajak. Resolusi posisi pajak yang diambil oleh Perusahaan dan entitas anak, melalui negosiasi dengan otoritas pajak yang relevan dapat berlangsung bertahun-tahun dan sangat sulit untuk memprediksi hasil akhirnya. Apabila terdapat perbedaan perhitungan pajak dengan jumlah yang telah dicatat, perbedaan tersebut akan berdampak pada pajak penghasilan dan pajak tangguhan dalam tahun dimana penentuan pajak tersebut dibuat.

Aset pajak tangguhan, termasuk yang timbul dari rugi fiskal dan perbedaan temporer, diakui apabila dianggap lebih mungkin daripada tidak

*Detail of valuation approach and significant data input used in the revaluation property, plant and equipment and investment properties are disclosed in Notes 6 and 7, respectively.*

Post-employment Benefits

*The determination of the post-employment benefits is dependent on the selection of certain assumptions used by actuaries in calculating such amounts. Those assumptions include among others, discount rate and rate of salary increase. Actual results that differ from the Company and its subsidiaries' assumptions are accumulated and amortized over future periods and therefore, generally affect the recognized expense and liabilities recorded in such future periods. While it is believed that the Company and its subsidiaries' assumptions are reasonable and appropriate, significant differences in actual experience or significant changes in assumptions may materially affect the Company and its subsidiaries' post-employment benefit.*

*Assumptions used in the calculation of post-employment benefit are disclosed in Note 50.*

Income Taxes

*The calculations of income tax expense for the Company and its subsidiaries require judgements and assumptions in determining the deductibility of certain expenses during the estimation process. All judgement and estimates made by management may be challenged by the Directorate General of Taxation ("DGT"). As a result, the ultimate tax determination becomes uncertain. The resolution of tax positions taken by the Company and its subsidiaries, through negotiations with the relevant tax authorities can take several years to complete and in some cases it is difficult to predict the ultimate outcome. Where the final outcome of these matters is different from the amounts initially recorded, such differences will have an impact on the income tax and deferred income tax provision in the year in which this determination is made.*

*Deferred tax assets, including those arising from tax losses carried forward and temporary differences, are recognized only where it is*

Standar Penilaian yang digunakan adalah Standar Penilaian Indonesia edisi VI - 2015, dengan menggunakan pendekatan penilaian berikut ini:

**1. Pendekatan Pasar**

Pendekatan ini mempertimbangkan penjualan dari aset sejenis atau pengganti dan data pasar yang terkait, serta menghasilkan estimasi nilai melalui proses perbandingan. Pada dasarnya, properti yang dinilai (obyek penilaian) dibandingkan dengan properti yang sebanding, baik dari transaksi yang telah terjadi maupun properti yang masih dalam tahap penawaran penjualan dari suatu proses jual beli.

Pendekatan pasar digunakan untuk kelas aset tanah.

**2. Pendekatan Pendapatan**

Pendekatan ini mempertimbangkan pendapatan dan biaya yang berhubungan dengan aset yang dinilai dan mengestimasi nilai melalui proses kapitalisasi. Kapitalisasi menghubungkan pendapatan (umumnya pendapatan bersih) dengan suatu definisi jenis nilai melalui konversi pendapatan menjadi estimasi nilai. Proses ini dapat menggunakan metode kapitalisasi langsung atau metode Arus Kas Terdiskonto, atau keduanya.

Pendekatan pendapatan digunakan untuk kelas aset tanah dengan peruntukan komersial atau tanah dengan skala pengembangan.

**3. Pendekatan Biaya**

Pendekatan ini berdasarkan prinsip bahwa harga dimana pembeli di pasar akan membayar atas aset yang sedang dinilai tidak akan lebih dari biaya untuk membeli atau mengkonstruksi aset modern yang ekuivalen, tanpa mempertimbangkan biaya akibat penundaan waktu dan biaya keterlambatan. Untuk aset yang tidak baru, pendekatan biaya memperhitungkan estimasi depresiasi termasuk penyusutan fisik dan keusangan lainnya (fungsional dan eksternal). Biaya konstruksi dan depresiasi ditentukan oleh hasil analisis dari perkiraan biaya konstruksi dan depresiasi sesuai dengan kelaziman yang ada di pasar atau dalam praktek penilaian.

*The valuation standard used is Indonesian Valuation Standards edition VI - 2015, with following valuation approaches:*

**1. Market Approach**

*This approach considers the sales of similar assets or replacement assets and related market information, which provides value estimation by a comparison process. Basically, the properties being valued (object being appraised) are compared to other similar properties that either have been transacted or offered for sale in a sale and purchase transaction.*

*The market approach is applied to the asset class of land rights.*

**2. Income Approach**

*This approach considers the income and costs related to the assets being valued and estimates value through a capitalization process. Capitalization connects income (generally net income) with certain definition of value through conversion of income into the estimated value. This process uses the direct capitalization method or the Discounted Cash Flow method or both.*

*The income approach is applied to the asset class of commercial land rights or land rights with development scale.*

**3. Cost Approach**

*This approach is based on a principle that the price that a buyer in the market would pay for the asset being valued would not be more than the cost to purchase or construct a modern equivalent asset, without taking into consideration cost due to time and overtime charges. For assets which are not new, the cost approach includes depreciation estimation including physical depreciation and other obsolescence (functional and external). Construction cost and depreciation should be determined from analysis of the construction cost and estimation of depreciation according to the prevalence in the market or in valuation practice.*

- a. Harga jual atau harga sewa per meter persegi;
- b. Tingkat hunian;
- c. Tingkat pertumbuhan;
- d. Tingkat diskonto dan kapitalisasi;
- e. Biaya pembuatan baru per meter persegi;
- f. Depresiasi, keusangan fungsional dan eksternal.

Penyesuaian dilakukan berdasarkan ukuran, lokasi, bentuk dan spesifikasi, hak atas tanah dan elemen perbandingan lainnya.

Nilai Wajar level 3 dihitung dengan menerapkan pendekatan pasar, pendekatan pendapatan dan pendekatan biaya dengan menggunakan *input* yang tidak dapat diobservasi.

Selain menggunakan *input* yang berasal dari pasar, KJPP RHR juga menggunakan *input* yang tidak dapat diobservasi dari pasar dan menggunakan asumsi khusus terkait dengan jenis aset yang tergolong sebagai properti khusus, seperti pembangkit listrik, jaringan transmisi dan distribusi, gardu listrik dan lainnya.

Penyesuaian dilakukan berdasarkan ukuran, kapasitas, usia, lokasi, bentuk dan spesifikasi, hak atas tanah dan elemen perbandingan lainnya.

Informasi mengenai pengukuran nilai wajar yang menggunakan informasi signifikan yang tidak dapat diobservasi (Level 3) adalah sebagai berikut:

- a. Sale or rental price per square meter;
- b. Occupancy rate;
- c. Growth rate;
- d. Discount and capitalization rate;
- e. Replacement cost new per square meter;
- f. Depreciation, functional and external obsolescence.

Adjustments were made based on size, location, shapes and specifications, land rights and other comparison elements.

The level 3 Fair Value is calculated through the market approach, income approach and cost approach by using unobservable inputs.

Other than the data inputs observed from the market, KJPP RHR also used unobservable market data inputs and used special assumptions related to the assets classified as specialized property, such as power plants, transmission and distribution networks, substations and others.

Adjustments were made based on size, capacity, age, location, shapes and specifications, land rights and other comparison elements.

Information about fair value measurements using significant unobservable inputs (Level 3) are as follows:

**Aset Tidak Digunakan Dalam Operasi**

**Assets Not Used In Operations**

Assets not used in operations comprised of those to be relocated, those temporarily not in use in operations, and assets to be repaired.

Kerugian penurunan nilai dari aset yang tidak digunakan dalam operasi untuk tahun 2018, 2017 dan 2016 masing-masing sebesar Rp301.965, Rp327.986 dan Rp167.941 dicatat sebagai beban lain-lain yang merupakan bagian dari penghasilan (beban) lain – lain – bersih (Catatan 47).

Loss on impairment of assets not used in operations for 2018, 2017 and 2016 amounted to Rp301,965, Rp327,986 and Rp167,941, respectively and were recorded as other expense classified in other income (expense) - net (Note 47).

Aset tertentu yang tidak digunakan dalam operasi dijual seharga Rp88.550 tahun 2018, Rp45.983 tahun 2017 dan Rp27.705 tahun 2016. Nilai buku aset yang dijual tersebut telah nihil, sehingga hasil penjualan aset seluruhnya merupakan keuntungan penjualan aset tertentu yang tidak digunakan dalam operasi (Catatan 47).

Certain assets not used in operations were sold with a selling price of Rp88,550 in 2018, Rp45,983 in 2017 and Rp27,705 in 2016. The carrying value of such assets was nil, hence all the proceeds from the sale of certain assets represented a gain on the sale of assets not used in operations (Note 47).

Manajemen berpendapat bahwa percepatan penyusutan atas aset yang tidak digunakan dalam operasi memadai untuk menutup risiko kerugian penurunan nilai yang mungkin timbul dari aset tersebut.

Management believes that accelerated depreciation on assets not used in operations is adequate to cover possible loss on impairment on the value of such assets.

Pada tanggal 31 Desember 2018, Perusahaan dan entitas anak melakukan penilaian kembali atas nilai wajar properti investasi, yang dilakukan oleh Kantor Jasa Penilai Publik Rengganis, Hamid & Rekan ("KJPP RHR") dalam laporan No.00073/2.0012-00/PI/02/0006/1/III/2019 tanggal 4 Maret 2019, penilai independen yang telah terdaftar di Kementerian Keuangan dengan nomor izin usaha No. 2.09.0012 dan OJK.

Pada tanggal 31 Desember 2017, Perusahaan dan entitas anak melakukan penilaian kembali atas nilai wajar properti investasi, yang dilakukan dalam laporan penilaian properti investasi No.RHR00R1P0118036.1 tanggal 31 Januari 2018.

Standar Penilaian yang digunakan adalah Standar Penilaian Indonesia edisi VI - 2015, dengan menggunakan pendekatan penilaian berikut ini:

**1. Pendekatan Pasar**

Pendekatan ini mempertimbangkan penjualan dari properti sejenis atau pengganti dan data pasar yang terkait, serta menghasilkan estimasi nilai melalui proses perbandingan. Pada umumnya, properti yang dinilai (objek penilaian) dibandingkan dengan transaksi properti yang sebanding, baik dari yang telah terjadi maupun properti yang masih dalam tahap penawaran penjualan dari suatu proses jual beli.

**2. Pendekatan Pendapatan**

Pendekatan ini mempertimbangkan pendapatan dan biaya yang berhubungan dengan properti yang dinilai dan mengestimasi nilai melalui proses kapitalisasi. Kapitalisasi menghubungkan pendapatan (umumnya pendapatan bersih) dengan suatu definisi jenis nilai melalui konversi pendapatan menjadi estimasi nilai. Proses ini dapat menggunakan metode kapitalisasi langsung atau metode arus kas terdiskonto, atau keduanya.

*As of December 31, 2018, the Company and its subsidiaries performs revaluation of the fair value of its property investment which is performed by Kantor Jasa Penilai Publik Rengganis, Hamid & Rekan ("KJPP RHR") in the report No. 00073/2.0012-00/PI/02/0006/1/III/2019 dated March 4, 2019, an independent valuer registered in the Ministry of Finance, with license permit No. 2.09.0012 and FSA.*

*As of December 31, 2017, the Company and its subsidiaries performed revaluation of the fair value of its investment properties which is performed in their assessment report on investment properties No.RHR00R1P0118036.1 dated January 31, 2018.*

*The valuation standard used is Indonesian Valuation Standards edition VI - 2015, with following valuation approaches:*

**1. Market Approach**

*This approach considers the sales of similar or replacement properties and related market data, which provides value estimation by a comparison process. Generally, the properties being valued (object being appraised) are compared to similar properties transaction that either have been transacted or offered for sale in a sale and purchase transaction.*

**2. Income Approach**

*This approach considers the income and costs related to the properties being valued and estimates value through a capitalization process. Capitalization connects income (generally net income) with certain definition of value through conversion of income into the estimated value. This process uses the direct capitalization method or the discounted cash flow method or both.*

**3. Pendekatan Biaya**

Pendekatan ini menetapkan nilai properti dengan mengestimasi biaya perolehan tanah dan biaya pengganti pengembangan baru (sesuatu yang dibangun) di atasnya dengan utilitas yang sebanding atau mengadaptasi properti lama dengan penggunaan yang sama, tanpa mempertimbangkan antara lain biaya akibat penundaan waktu pengembangan dan biaya lembur. Untuk properti yang lebih tua, pendekatan biaya memperhitungkan estimasi depresiasi termasuk penyusutan fisik dan keusangan lainnya (fungsional dan eksternal). Biaya konstruksi dan depresiasi seharusnya ditentukan oleh hasil analisis dari perkiraan biaya konstruksi dan depresiasi sesuai dengan kelaziman yang ada di pasar atau dalam praktek penilaian.

Tidak terdapat properti investasi yang digolongkan ke dalam nilai wajar level 1 dan level 3.

Nilai wajar properti investasi diklasifikasikan sebagai level 2 dalam hirarki nilai wajar.

Nilai wajar level 2 dari tanah dihitung dengan menggunakan pendekatan pasar dan pendekatan pendapatan. Input yang diperoleh dari pendekatan pasar yaitu:

- a. Harga jual atau harga sewa per meter persegi
- b. Tingkat hunian
- c. Tingkat pertumbuhan
- d. Tingkat diskonto dan kapitalisasi.

Penyesuaian dilakukan berdasarkan ukuran, lokasi, bentuk dan spesifikasi, hak atas tanah dan elemen perbandingan lainnya.

**3. Cost Approach**

*This approach establishes the value of the properties by estimating the acquisition of land and the cost of replacing the new development (something built) on it with comparable utility or adapting the old property with the same usage, without considering the costs due to development delays and overtime costs. For an older property, the cost approach includes depreciation estimation including physical depreciation and other obsolescence (functional and external). Construction cost and depreciation should be determined from analysis of the construction cost and estimation of depreciation according to the prevalence in the market or in valuation practice.*

*There were no investment properties which could be classified as the level 1 and level 3 fair value.*

*The fair values of investment properties are within level 2 of the fair value hierarchy.*

*The level 2 fair value of land is calculated using the market approach and income approach. Data inputs were obtained from the market approach that consists of:*

- a. sale or rental price per square meter*
- b. Occupancy rate*
- c. Growth rate*
- d. Discount and capitalization rate.*

*Adjustments were made based on size, location, shapes and specifications, land rights and other comparison elements.*

Piutang usaha Perusahaan dan PLN Batam dijamin dengan uang jaminan langganan jika terjadi kegagalan pembayaran (Catatan 35).

Cadangan kerugian penurunan nilai dibentuk secara kolektif untuk seluruh piutang yang telah lewat jatuh tempo.

Manajemen berpendapat bahwa cadangan kerugian penurunan nilai atas piutang adalah cukup. Pada tanggal 31 Desember 2018, jumlah piutang Perusahaan yang belum jatuh tempo dan tidak mengalami penurunan nilai adalah sebesar Rp21.628.281. Manajemen berkeyakinan bahwa tidak ada risiko kredit kualitas yang buruk karena Perusahaan memiliki jumlah pelanggan yang besar, tersebar mencakupi segmen pasar dan area geografis yang luas di seluruh Indonesia. Kesimpulan ini didukung juga oleh data historis kolektibilitas Perusahaan atas piutang usaha yang baik selama beberapa tahun.

**b. By age category of receivables that are  
not impaired**

The Company and PLN Batam trade receivables are secured by the customers' security deposits in case of default (Note 35).

Allowance for impairment losses were made collectively for all trade receivables which are past due.

Management believes that the allowances for impairment losses are adequate. As of December 31, 2018, the Company's receivables balance that is neither past due nor impaired amounted to Rp21,628,281. Management believes there is no heightened risk of poor credit quality of accounts receivable because it has a broad customer base, dispersed across varying market segments and geographic locations throughout Indonesia. This assessment is also supported by the Company's good historical collection rate of trade receivable across the years.

Analisa sensitivitas didasarkan pada  
perubahan atas satu asumsi aktuarial  
dimana asumsi lainnya dianggap konstan.  
Dalam prakteknya, hal ini jarang terjadi dan  
perubahan beberapa asumsi mungkin  
saling berkorelasi. Imbalan perhitungan  
sensitivitas liabilitas kerja jangka panjang  
atas asumsi aktuarial utama, metode yang  
sama (perhitungan nilai kini liabilitas  
imbalan kerja jangka panjang dengan  
menggunakan metode *projected unit credit*  
di akhir periode) telah diterapkan seperti  
dalam perhitungan liabilitas imbalan kerja  
jangka panjang yang diakui dalam laporan  
posisi keuangan konsolidasian.

The sensitivity analysis are based on a  
change in a single assumption while  
holding all other assumptions constant. In  
practice, this is unlikely to occur, and  
changes in some of the assumptions may  
be correlated. When calculating the  
sensitivity of the long term benefits  
liabilities to significant actuarial  
assumptions, the same method (present  
value of the long term benefits liabilities  
calculated with the projected unit credit  
method at the end of the reporting period)  
has been applied as when calculating the  
long term benefits liabilities recognized in  
the consolidated statement of financial  
position.

Perusahaan dan entitas anak terekspos  
dengan beberapa risiko melalui program  
imbalan pasti dan program kesehatan  
pascakerja. Risiko yang paling signifikan  
adalah sebagai berikut:

The Company and its subsidiaries are  
exposed to a number of risks through its  
defined benefit pension plans and post-  
employment medical plans. The most  
significant risks are as follows:

Volatilitas aset

Liabilitas program dihitung menggunakan  
tingkat diskonto yang merujuk kepada  
tingkat imbal hasil surat utang negara. Jika  
imbal hasil aset program lebih rendah,  
maka akan menghasilkan defisit program.

Asset volatility

The plan liabilities are calculated using a  
discount rate set with reference to  
government bond yields. If the yield of plan  
assets is lower, it will generate a deficit  
program.

Harapan umur hidup

Sebagian besar dari liabilitas program  
menyediakan manfaat seumur hidup,  
sehingga kenaikan harapan umur hidup  
akan mengakibatkan kenaikan liabilitas  
program.

Life expectancy

The majority of the plans' obligations are to  
provide lifetime benefit, so that the increase  
in life expectancy will result in an increase  
in the plans' liabilities.

Perusahaan dan entitas anak meyakini bahwa instrumen ekuitas memberikan imbal hasil yang paling baik dalam jangka panjang pada tingkatan risiko yang dapat diterima.

**ii. Manajemen risiko tingkat suku bunga**

Perusahaan dan entitas anak memiliki transaksi pada tingkat suku bunga tetap dan tingkat suku bunga mengambang. Transaksi dengan tingkat suku bunga mengambang terekspos terhadap risiko suku bunga arus kas. Pinjaman yang diterbitkan dengan tingkat suku bunga tetap mengekspos Perusahaan dan entitas anak dengan risiko suku bunga nilai wajar. Perusahaan dan entitas anak mengelola risiko dengan menyeimbangkan porsi pinjaman dengan bunga tetap dan bunga mengambang.

**Sensitivitas tingkat suku bunga**

Analisis sensitivitas berikut telah ditentukan berdasarkan eksposur Perusahaan dan entitas anak terhadap tingkat suku bunga untuk saldo instrumen keuangan terutang setelah pajak pada tanggal pelaporan. Analisis ini disusun dengan mengasumsikan jumlah saldo aset dan liabilitas terutang pada akhir periode pelaporan, terutang sepanjang tahun. Analisis sensitivitas ini menggunakan asumsi kenaikan dan penurunan sebesar 50 basis poin ("bp") pada tingkat bunga yang relevan dengan variabel lain dianggap konstan. Kenaikan dan penurunan sebesar 50 bp merupakan penilaian manajemen atas kemungkinan perubahan yang rasional terhadap tingkat bunga setelah mempertimbangkan kondisi ekonomi saat ini.

**ii. Interest rate risk management**

The Company and its subsidiaries have transactions at fixed and floating interest rates. Transactions at floating interest rates are exposed to cash flow interest rate risk. Borrowing issued at fixed rates exposes the Company and its subsidiaries to fair value interest risk. The Company and its subsidiaries manage the risk by maintaining an appropriate mix of fixed and floating rate borrowings.

**Interest rate sensitivity**

The sensitivity analysis below has been determined based on the Company and its subsidiaries' exposure to interest rates for financial instruments after tax outstanding at the reporting date. The analysis is prepared assuming the amount of assets and liabilities outstanding at the end of the reporting period was outstanding for the whole year. The sensitivity analysis uses an assumption of a 50 basis point ("bp") increase and decrease in the relevant interest rates with all other variables held constant. A 50 bp increase or decrease represents management's assessment of the reasonably possible change in interest rates after considering the current economic conditions.

Tabel tersebut telah disusun berdasarkan arus kas liabilitas keuangan yang tidak didiskontokan berdasarkan tanggal paling awal dimana Perusahaan dan entitas anak diwajibkan untuk membayar. Untuk arus bunga dengan tingkat bunga mengambang, nilai arus kas yang tidak terdiskonto diperoleh dari kurva suku bunga pada akhir periode. *manage liquidity risk by maintaining adequate cash, reserves, banking facilities and reserve borrowing facilities by continuously monitoring forecast and actual cash flows and matching the maturity profiles of financial liabilities.*

*In addition, the Company and its subsidiaries maintain an adequate amount of cash and cash equivalents and short-time investments, which may be readily converted to cash upon any unforeseen interruption of their cash collections.*

*The following table details the remaining contractual maturity for its financial liabilities with an agreed repayment period as of December 31, 2018. The table has been drawn up based on the undiscounted cash flow of financial liabilities based on the earliest date on which the Company and its subsidiaries are required to pay. To the extent that interest flows are floating rate, the undiscounted cash flow is derived from interest rate curves at the end of the reporting period. For foreign currency denominated financial liabilities, the undiscounted amortization is translated using the relevant forward exchange curve at the end of the reporting period.*
