ONESECURE Unveils Innovative WEBYITH Service to Combat Web Defacement and Web Spoofing

Singapore, July 28, 2025 – In an era where digital threats are more prevalent than ever, ONESECURE is proud to introduce WEBYITH, an innovative service designed to combat the growing threats of web defacement and web spoofing. As cyber threats continue to evolve, businesses need robust solutions to protect their online presence. WEBYITH leverages advanced algorithms and real-time monitoring to provide comprehensive protection against unauthorized changes and deceptive practices.

In today's digital age, the security of online platforms is paramount. Web defacement and web spoofing are two of the most prevalent threats that can compromise the credibility and trustworthiness of a business. Web defacement involves unauthorized alterations to a website's appearance, often replacing legitimate content with malicious messages or images. On the other hand, web spoofing tricks users into believing they are interacting with a legitimate website, leading to potential data breaches and financial losses.

WEBYITH is ONESECURE's latest innovation, specifically engineered to detect and mitigate these threats. Leveraging advanced algorithms and real-time monitoring by ONESECURE's 24x7 Security Operation Centres, WEBYITH provides comprehensive protection against unauthorized changes and deceptive practices. This service not only identifies and alerts businesses to potential threats but also offers actionable insights to prevent future occurrences.

"WEBYITH represents a significant leap forward in our commitment to cybersecurity," said Edmund How, Managing Director of ONESECURE. "As cyber threats continue to evolve, it is crucial for businesses to stay ahead of the curve. WEBYITH empowers organizations to safeguard their online presence, ensuring that their customers can trust the integrity of their digital interactions."

ONESECURE's significant investment in developing WEBYITH underscores their dedication to creating innovative solutions that address the unique cybersecurity challenges faced by modern businesses.

WEBYITH's key features include:

- **Real-Time Monitoring:** Continuous surveillance of websites to detect any unauthorized changes or suspicious activities by ONESECURE 24x7 Security Operation Centres.

- **Human Validation:** Cybersecurity professionals validate the findings to ensure accuracy and provide an additional layer of protection.
- **Actionable Insights:** Detailed reports and recommendations to help businesses strengthen their security measures.
- **User-Friendly Interface:** An intuitive platform that makes it easy for businesses to manage their online security.

ONESECURE invites businesses of all sizes to experience the benefits of WEBYITH. With its robust features and unparalleled protection, WEBYITH is poised to become an essential tool in the fight against cyber threats.
